

# M5311 AT Command Interface Specification

NB-IoT Series

Version: 2.1

Date: 2018-12-27

**China Mobile IoT Company Limited**  
<http://iot.10086.cn>

© 2018 CMCC IoT Comany.

## Document Revision History

Revision	Date	Notes
1.0	2018-01-26	Initial release
1.1	2018-02-22	Change tcp/ip network commands
1.2	2018-04-04	Add CMCC OneNET commands
1.3	2018-04-23	Add AT*MNBIOTEVENT command
1.4	2018-05-16	Add AT+CMWSCTRL command
1.5	2018-05-29	Add AT+CPOF/AT+CMRB/AT*MDPDNP command Change HTTP/HTTPS commands
2.0	2018-06-28	Remove unsupported AT command and Add AT Commands special for CMIOT/AT+CRLA Change HTTP/HTTPS commands Updated AT+CMWSCTRL/AT+CTZR
2.1	2018-12-29	Add AT+CMADC/AT+COLDDB/AT+DSSSER/AT+TAUAC commands Add AT*WAKETIME/AT*ENTERSLEEP commands Add AT*CMBAND set command, support to lock/select Band Add AT+IPR=0, support atuo baud rate. Change AT*CMBAND? result code form 'Current Band' to 'Configured Band'. Change AT+GPIO commands, change parameter <gpio_id> to <gpio_pin>, from 9/10 to 34/35. Fix the Incorrect time-zone of the result AT+CCLK? Change +HTTPPEER command Add +HTTPDICONN command Change +HTTPNMIIH command Change +HTTPNMIC command Change AT+IPRD result data from Synchronous way to Asynchronous way Add AT+CLPLMN Remove AT^SYSINFO Change AT+EPORT command Add AT*EDRXCFG to support eDRX PTW configuration(Only the M5311_CM version is supported.)

## Table of Contents

### Content

1.	General Command Line specifications .....	1
1.1.	Manufacturer Specific Responses to AT Commands.....	1
1.2.	SMS Handling Details .....	1
1.3.1.	SMS PDU Mode.....	1

5.2.3	GPRS Timer 3.....	192

## Definitions and Abbreviations

---

3GPP	3 <sup>rd</sup> Generation Partnership Project
AID	Application Identifier
AT	Attention; this two-character abbreviation is always used to start a command line to be sent from TE to TA
ATCI	AT Command Interface
BCD	Binary Coded Decimal
BER-TLV	Basic Encoding Rule - TLV
DF	Dedicated File
DO	Data Object
EF	Elementary File
FCP	File Control Parameters
GSM	Global System for Mobile communications
IMSI	International Mobile Subscriber Identity
MCC	Mobile Country Code
ME	Mobile Equipment
MMI	Man Machine Interface
MNC	Mobile Network Code
MT	Mobile Termination
PIN	Personal Identification Number
PS_DO	PIN Status Data Object
RFU	Reserved for Future Use
SIM	Subscriber Identity Module
SFI	Short EF Identifier
STK	SIM Toolkit
TA	Terminal Adaptor (e.g. a GSM data card equal to DCE Data Circuit terminating Equipment)
TE	Terminal Equipment, e.g. a computer (equal to DTE; Data Terminal Equipment)
TLV	Tag Length Value
UE	User Equipment
UICC	Universal Integrated Circuit Card
USIM	Universal Subscriber Identity Module
B-TID	Bootstrapping Transaction Identifier
GBA	Generic Bootstrapping Architecture
GBA_ME	ME-based GBA
GBA_U	GBA with UICC-based enhancements
TMGI	Temporary Mobile Group Identity

## 1. General Command Line specifications

### 1.1. Manufacturer Specific Responses to AT Commands

A number of AT commands require generating a manufacturer specific response. These commands are listed below:

- ATI
- AT+GMM/AT+CGMM
- AT+GMR/AT+CGMR
- AT+GMI/AT+CGMI
- AT+GOI/AT+CGOI
- AT+HVER/AT+SWVER

Note: The result of AT+HVER/AT+SWVER is the current version. Other commands return the result to the factory factory version.

### 1.2. SMS Handling Details

#### 1.3.1. SMS PDU Mode

The M5311 data services software supports two type of PDU mode:

- PDU mode according to 3GPP standard 27.005
- PDU mode backward compatible with data solutions currently on the market (called TPDU only).

Both methods have been implemented to allow more compatibility with SMS programs, which can be downloaded off the Internet.

The software can be configured to use either method by using the profile AT+CSMS command. The table below gives details of the two methods:

PDU Mode	AT+CSMS	Description
3GPP Standard	0	PDU mode implemented exactly as described in 3GPP TS 27.005.
3GPP Standard	1	The same as above, but acknowledgement command must be sent, as described in 3GPP TS 27.005.
TPDU only	128	PDU mode implemented such that only the SMS TPDU is sent, stored, and displayed. The Service Centre Address information is omitted.

#### 1.3.2. Handling of SMS Status Reports

SMS status reports are handled differently in a number of areas to standard SMS messages. This section describes the specifics of how they are dealt with within the modem software.

## 2. AT Command Overview

This section gives an overview of the AT command interface.

### 2.1. Command Syntax

The AT command set is a combination of 3GPP TS 27.005, 3GPP TS 27.007 and ITU-T recommendation V.250. The format of an AT command can be described in BNF (Backus-Naur Form) as follows:

```

ATCommand ::= <CR> AT [<command>] <CR>
command ::= { {<basicSyntax> | <basicSyntaxS>} [<command>] } |
           {<extendedSyntax> [; <command>] }

basicSyntax ::= <commandString> [<number>]

basicSyntaxS ::= S <number> = [<number>]

extendedSyntax ::= + <commandString> ? | = {? |
<arguments>} arguments ::= [<number>] [, <arguments>]

number ::= 0...9 [<number>]

commandString ::= A...Z | 0...9 | ! | % | - | . | / | ^ | [<commandString>]
  
```

According to the format, the AT commands can be split into three categories syntactically; “basic”, “S parameter”, and “extended”. Details are provided in the next sections.

### 2.2. Basic Syntax

These have the format AT<x><n>, or AT&<x><n>, where <x> is the command, and <n> is/are the argument(s) for that command. An example of this is ATE<n>, which tells the DCE whether received characters should be echoed back to the DTE according to the value of <n>. <n> is optional and a default will be used if missing.

#### 2.2.1. Parameter Syntax

These have the format ATS<n>=<m>, where <n> is the index of the S register to set, and <m> is the value to assign to it. <m> is optional; if it is missing, then a default value is assigned.

#### 2.2.2. Extended Syntax

These commands can operate in several modes, as follows:

AT+<x>=?	This is test mode, which will cause a response of the command and valid argument ranges. A typical response might be of the form “+TFG=(0,2),(1-10)”, to indicate that command +TFG takes 2 arguments, which can be values 0 or 2, 1 to 10 and 3 only respectively.
AT+<x>?	This is read mode. The command will respond with the present values of its arguments.
AT+<x>=<n>	This is write mode. Here the command will take the arguments supplied and use them in the way specified. If the argument is missing, a default will be used.

## 2.3. Result Codes

Verbose Result Code	Short Result Code	Description
OK	0	Indicates execution of a valid command
CONNECT	1	A connection has been established; ATCI is moving from command state to online data state
RING	2	Incoming call indication
NO CARRIER	3	A call attempt has failed.
ERROR	4	Command error. The parser will execute as much of the command as it can until an error is detected, when it will abort the process and respond with this message.

## 2.4. CME Error Codes

### 2.4.1. General CME Error Codes

Verbose CME Error Code	Short CME Code	Description
Phone failure	0	Phone failure
No connection to phone	1	No connection to phone
Phone-adaptor link reserved	2	The requested connection is not allowed due to one or more other active connections.
Operation not allowed	3	The operation requested is not allowed (generally operations performed in a restrictive state i.e. fixed dialing)
Operation not supported	4	The operation requested is not supported (generally parameters in operations which aren't supported)
PH-SIM PIN required	5	PIN required for the SIM the phone is locked to
PH-FSIM PIN required	6	PIN required for the First SIM the phone is locked to
PH-FSIM PUK required	7	PUK required for the First SIM the phone is locked to
SIM not inserted	10	Operation not allowed: SIM Card hasn't been inserted (or has been removed)
SIM PIN required	11	Operation not allowed: SIM PIN required (possibly as a result of the pending command failing)
SIM PUK required	12	Operation not allowed: SIM PUK required (possibly as a result of the pending command failing)
SIM failure	13	Operation not allowed: SIM fault has occurred (possibly as a result of the pending command failing)
SIM busy	14	Operation not allowed: SIM is being used by another procedure
SIM wrong	15	Operation not allowed: MEP check has failed
Incorrect password	16	The incorrect password for the operation has been provided
SIM PIN2 required	17	Operation not allowed: SIM PIN2 required (possibly as a result of the pending command failing)
SIM PUK2 required	18	Operation not allowed: SIM PUK2 required

		(possibly as a result of the pending command failing)
Memory full	20	Operation failed due to SIM memory being full
invalid index	21	Operation failed – invalid memory index supplied
not found	22	The requested index (call, memory) has not been found
memory failure	23	NVRAM read/write has failed
text string too long	24	The entered text string is longer than allowed
invalid characters in text string	25	Invalid characters in string (i.e. characters in expected numeric string)
dial string too long	26	The entered dial string is longer than allowed
invalid characters in dial string	27	Invalid characters in dial string
no network service	30	Operation can't be performed due to ME not currently camped on network
network timeout	31	Operation failed: network timed out
network not allowed - emergency calls only	32	Only emergency calls are currently allowed (due to either requiring PIN/PUK or reduced network coverage)
network personalization PIN required	40	Operation failed: require MEP PIN code
network personalization PUK required	41	Operation failed: require MEP PUK code
network subset personalization PIN required	42	Operation failed: require MEP PIN code
network subset personalization PUK required	43	Operation failed: require MEP PUK code
service provider personalization PIN required	44	Operation failed: require MEP PIN code
service provider personalization PUK required	45	Operation failed: require MEP PUK code
corporate personalization PIN required	46	Operation failed: require MEP PIN code
corporate personalization PUK required	47	Operation failed: require MEP PUK code
hidden key required	48	Operation failed: require hidden key entry (Release 5 / 3G only)
Incorrect Parameters	50	Incorrect parameters entered.
Unknown	100	An unknown error has occurred

#### 2.4.2. CRSM/CSIM CME Error Codes

Verbose CME Error Code	Short CME Code	Description
invalid command length	749	Invalid command length provided to CSIM
invalid input string	750	Invalid command string provided to CSIM
command not allowed for 3G SIM	751	SIM command not allowed on 3G SIM (Release 5 only)
Invalid <pathid> parameter	752	Invalid pathid for SIM
missing required command parameter	753	Command type parameter missing from CRSM command
invalid SIM command	754	Command type parameter for CRSM invalid
invalid File Id	755	FileID parameter for CRSM invalid

missing required P1/2/3 parameter	756	P1/2/3 for CRSM command missing
invalid P1/2/3 parameter	757	P1/2/3 for CRSM command invalid
missing required command data	758	Command Data for CRSM command missing
invalid characters in command data	759	Command Data for CRSM command invalid

#### 2.4.3. +CSCS CME Error Codes

Verbose CME Error Code	Short CME Code	Description
+CSCS type not supported	737	The CSCS mode specified is not supported
+CSCS type not found	738	The CSCS mode specified is not supported

#### 2.4.4. +CPOL CME Error Codes

Verbose CME Error Code	Short CME Code	Description
must include <format> with <oper>	741	Operator format parameter is missing
incorrect <oper> format	742	Operator data is in incorrect format
<oper> length too long	743	Operator data is too long
SIM full	744	PLMN data cannot be written as the PLMN store is full
unable to change PLMN list	745	The SIM PLMN list cannot be changed since CPOL cannot access it
network operator not recognized	746	Operator specified is not recognized
access technology missing	747	Specified access technology missing
access technology not supported	748	Specified access technology not supported

#### 2.4.5. Miscellaneous Proprietary CME Error Codes

Verbose CME Error Code	Short CME Code	Description
SIM toolkit menu has not been configured	720	The SIM toolkit menu has not been configured
SIM toolkit already in use	721	The SIM toolkit is already in use
SIM toolkit not enabled	722	SIM toolkit not enabled on the SIM
MMI profile not updated	724	The MMI profile has not been updated
invalid SIM toolkit proactive command ID	725	An invalid SIM toolkit proactive command ID was received
invalid SIM proactive command response data	726	Invalid SIM toolkit proactive command response data received
invalid input value	765	One or more input values are invalid
unsupported value or mode	766	One or more input values are unsupported
operation failed	767	Operation failed
multiplexer already active	768	Multiplexer already active – cannot be changed or re-activated
unable to get control of required module	769	Command cannot be executed since a required resource cannot be allocated
SIM invalid - network reject	770	The SIM has been rejected by the network
SIM powered down	772	The SIM has been powered down
SIM File not present	773	The SIM file is not present

invalid input value	794	One or more input values are invalid
No valid GId	795	No valid GId

#### 2.4.6. PSD and Packet Domain CME Error Codes

Note that "PSD" in the Verbose CME Error Code refers to any Packet Domain error.

Verbose CME Error Code	Short CME Code	Description
illegal MS	103	Illegal MS
illegal ME	106	Illegal ME
PSD services not allowed	107	Attach not allowed due to SIM/network restrictions
PLMN not allowed	111	Operation failed due to incorrect PLMN
location area not allowed	112	Operation failed due to incorrect LA
roaming not allowed in this location area	113	Operation failed due to incorrect LA
service option not supported	132	Operation failed due to service not being supported
requested service option not subscribed	133	Operation failed due to service not being subscribed
service option temporarily out of order	134	Operation failed due to service option being temporarily out of order
Unspecified GPRS error	148	Operation failed due to unknown Packet Domain error
PDP authentication failure	149	Operation failed due to PDP authentication failure
invalid mobile class	150	Operation failed due to invalid ME operation class
Last PDN Disconnection not allowed #49	151	UE attempted to disconnect the last PDN connection.
PSD - activation rejected by GGSN	577	Activation failed due to rejection by Gateway GPRS Support Node
PSD - unspecified activation rejection	578	Activation failed for unspecified reason
PSD - bad code or protocol rejection	579	PPP failure due to bad code or protocol rejection
PSD - can't modify address	580	PPP failure, address cannot be modified
PSD - CHAP close	581	PPP failure – CHAP close
PSD - profile (cid) currently unavailable	582	CID is currently in use by another entity
PSD - a profile (cid) is currently active	583	An active context currently exists
PSD - combined services not allowed	584	Combined services are not allowed
PSD - conditional IE error	585	Conditional IE error
PSD - context activation rejected	586	PPP failure – context activation rejected
PSD - duplicate TI received	587	Duplicate Transaction Identifier received
PSD - feature not supported	588	Feature not supported
PSD - service not available	589	PPP Failure – either service not available or device powering down
PSD - unknown IE from network	590	IE non-existent or not implemented
PSD - implicitly detached	591	EMM Implicitly detached
PSD - insufficient resources	592	Insufficient resources to complete action
PSD - invalid activation state (0-1)	593	An operation has been carried out where the

		context is in the incorrect state
PSD - invalid address length	594	PPP Failure – invalid address length
PSD - invalid character in address string	595	PPP Failure – invalid character in address string
PSD - invalid cid value	596	The supplied CID value is out of the allowed range
PSD - invalid dial string length	597	PPP Failure – invalid dial string length
PSD - mode value not in range	598	Invalid mode for Packet Domain event reporting
PSD - invalid MAND information	599	Invalid mandatory information
PSD - SMS service preference out of range	600	Invalid SMS service preference value supplied
PSD - invalid TI value	601	Invalid Transaction Identifier
PSD - IPCP negotiation timeout	602	PPP Failure – IPCP negotiation timeout
PSD - LCP negotiation timeout	603	PPP Failure – LCP negotiation timeout
PSD - LLC error	604	LLC error
PSD - LLC or SNDCP failure	605	LLC or SNDCP failure
PSD - lower layer failure	606	Lower layer failure
PSD - missing or unknown APN	607	Missing or unknown APN specified
PSD - mobile not ready	608	Mobile not ready
PSD - MS identity not in network	609	MS ID not in network
PSD - MSC temporarily not reachable	610	MSC temporarily not reachable
PSD - message incompatible with state	611	Message incompatible with state
PSD - message type incompatible with state	612	Message type incompatible with state
PSD - unknown message from network	613	Unknown message from network
PSD - NCP close	614	PPP Failure – NCP close
PSD - network failure	615	Network failure
PSD - no echo reply	616	PPP Failure – no echo reply
PSD - no free NSAPIs	617	PPP Failure – no free NSAPIs
PSD - processing of multiple cids not supported	618	Only a single CID may be active at any one time
PSD - no PDP context activated	619	No PDP context activated
PSD - normal termination	620	PPP Failure – normal termination
PSD - NSAPI already used	621	NSAPI already used
PSD - address element out of range	622	PPP Failure - address element out of range
PSD - PAP close	623	PPP Failure – PAP close
PSD - PDP context w/o TFT already activated	624	PPP Failure - context without TFT already activated
PSD - pdp type not supported	625	PPP Failure – invalid PDP type
PSD - peer refuses our ACCM	626	PPP Failure - peer refuses our ACCM
PSD - peer refuses our IP address	627	PPP Failure - peer refuses our IP address
PSD - peer refuses our MRU	628	PPP Failure - peer refuses our MRU
PSD - peer re-requested CHAP	629	PPP Failure - peer re-requested CHAP
PSD - profile (cid) not defined	630	Operation on an inactive/undefined CID
PSD - unspecified protocol error	631	Unspecified protocol error
PSD - QOS not accepted	632	PPP Failure - QOS not accepted

PSD - QOS validation fail	633	PPP Failure - QOS validation fail
PSD - reactivation required	634	Reactivation required
PSD - regular deactivation	635	Regular deactivation
PSD - semantic error in TFT operation	636	Semantic error in TFT operation
PSD - semantic errors in packet filter	637	Semantic errors in packet filter
PSD - semantically incorrect message	638	Semantically incorrect message
PSD - service type not yet available	639	Service type not available
PSD - syntactical error in TFT operation	640	Syntactical error in TFT operation
GPRS - syntactical errors in packet filter	641	Syntactical errors in packet filter
PSD - too many RXJs	642	PPP Failure - too many RXJs
PSD - unknown PDP address or type	643	Unknown PDP address or type
PSD - unknown PDP context	644	Unknown PDP context
PSD - user authorization failed	645	User authorization failed
PSD - QOS invalid parameter	646	Invalid QoS parameters
PSD - FDN failure	647	FDN failure
PSD - bad pdp context parameters	649	Bad PDP context parameters
PSD - PDP context already active	650	PDP context already active
PSD - LCP termination negotiation timeout	651	PPP LCP termination negotiation timeout
more than one double colon in IPv6 address	652	IPV6 PDP context addressing error: more than one double colon
IPv6 address ended with part of an IPv4 address	653	IPV6 PDP context addressing error: IPv6 address ended with part of an IPv4 address
IPv6 address used dotted-decimal form outside an IPv4 address	654	IPV6 PDP context addressing error: IPv6 address used dotted-decimal form outside an IPv4 address
in an IPv6 address, a byte of an IPv4 address was too big, causing overflow	655	IPV6 PDP context addressing error: in an IPv6 address, a byte of an IPv4 address was too big, causing overflow
in an IPv6 address, a byte of an IPv4 address was missing	656	IPV6 PDP context addressing error: in an IPv6 address, a byte of an IPv4 address was missing
in an IPv6 address, a byte of an IPv4 address was more than 255	657	IPV6 PDP context addressing error: in an IPv6 address, a byte of an IPv4 address was more than 255
in an IPv6 address, a byte pair was more than hex ffff	658	IPV6 PDP context addressing error: in an IPv6 address, a byte pair was more than hex ffff
in an IPv6 address, a byte of an IPv4 address was too short or contained invalid characters	659	IPV6 PDP context addressing error: in an IPv6 address, a byte of an IPv4 address was too short or contained invalid characters
an IPv6 address was too short or contained invalid characters	660	IPV6 PDP context addressing error: an IPv6 address was too short or contained invalid characters
in an IPv6 address, a byte pair was too big, causing overflow	661	IPV6 PDP context addressing error: in an IPv6 address, a byte pair was too big, causing overflow
an IPv6 address started with a single colon	662	IPV6 PDP context addressing error: an IPv6 address started with a single colon
an IPv6 address ended with a single colon	663	IPV6 PDP context addressing error: an IPv6 address ended with a single colon

an IPv6 address contained an IPv4 address other than at the end	664	IPV6 PDP context addressing error: an IPv6 address contained an IPv4 address other than at the end
an IPv6 address was too long	665	IPV6 PDP context addressing error: an IPv6 address was too long
an IPv6 address was followed by invalid characters	666	IPV6 PDP context addressing error: an IPv6 address was followed by invalid characters
PSD - operator Determined Barring	670	Operator has barred the PSD connection
PSD - activation rejected by GW or PDNGW	671	The activation was rejected by the Gateway or PDN Gateway
PSD – PTI already in use	672	NB-IOT PTI already in use
PSD – EPS Bearer Context without TFT already activated	673	EPS bearer context without a TFT has already been activated with the same bearer settings
PSD – PTI mismatch	674	PTI mismatched during EPS bearer procedure
PSD – PDN Type IPV4 only allowed	675	Only IPV4 type connections are allowed
PSD – PDN Type IPV6 only allowed	676	Only IPV6 type connection are allowed
PSD – single address bearers only allowed	677	Only single IP address (either IPV4 or IPV6) type connections allowed
PSD – ESM information not received	678	No information received at the ESM level
PSD – PDN connection does not exist	679	PDN connection referenced for bearer modification or deactivations non-existent
PSD – multiple PDN connection not allowed for one APN	680	Multiple PDN connections (primary contexts) cannot be made using the same APN on NB-IOT
PSD – collision with network initiated request	681	UE initiated operation clashed with network initiated operation
PSD – unsupported QCI value	682	QCI value not supported
PSD – invalid PTI value	683	PTI value is not valid
PSD – incompatible APN restriction value	684	APN restriction value not compatible
PSD – reactivation request	685	Network is requesting the UE to re-activate the PDN connection
LTE - IMSI unknown in HSS	690	UE not known (registered) in the HSS
LTE - illegal UE	691	Networks refused service to UE (ID failure or authentication failure)
LTE - EPS service not allowed	692	UE not allowed to operate EPS services
LTE - EPS and non EPS Service not allowed	693	UE not allowed to operate in EPS or non-EPS services
LTE - UE ID cannot be derived	694	Network cannot derive UE's ID
LTE - EPS tracking area not allowed	695	UE not allowed to operate in tracking area
LTE - roaming not allowed in TA	696	Roaming not allowed in current tracking area
LTE - roaming not allowed in PLMN	697	Roaming not allowed in current PLMN
LTE - no suitable cells in TA	698	UE required to operate in different tracking area in order to do a tracking area update
LTE - CS domain not available	699	CS (voice) services not available
LTE - ESM failure	700	ESM messaging failure
LTE - MAC failure	701	USIM detected MAC in authentication not fresh
LTE - synch failure	702	SQN in authentication messaging out of range
LTE - congestion	703	Congestion in the network
LTE - UE security capability mismatch	704	UE security capability does not match that of the network

LTE - security mode rejected, unspecified	705	Security mode command rejected by UE
LTE - UE not authorized in CSG cell	706	UE not allowed to operate in CSG cell with CSG ID
LTE – non-EPS authorization unacceptable	707	Non EPS authorization not accepted by UE
LTE - CS domain temporarily unavailable	708	CS fallback request cannot be served temporarily
LTE - no EPS bearer context activated	709	Tracking area update occurred when no active EPS bearer
PSD – PSD Mode not possible	710	PSD Mode setting not possible due to current network registration status
PSD – invalid connection type	711	Invalid connection type
PSD – no free PSD bearer IDs	712	No free PSD bearer IDs for connection (NSAPIs for 2G/3G)
PSD – no free PSD PTIs	713	No free PSD PTIs
PSD – unable to open data connection	714	Data connection to the TE is not possible at this time
PSD- Incorrect username/password	715	Username and password set for EPS bearer (i.e. using AT*MCGDUSNPWD command or from PPP negotiation) was incorrect compared to that used to set up the EPS bearer on power-on attach (i.e. using AT*MCGDEFCONT command)

#### 2.4.7. \*ENGINFO CME Error Codes

Verbose CME Error Code	Verbose CME Error Code	Verbose CME Error Code
No Service state	840	Current state is no service state
In cell search state	841	Current state is cell search state
ERRC is deactivated	842	ERRC has been deactivated
In cell reselection state	843	Current state is cell reselection state
In L1 test mode	844	Current L1 is in test mode
In reestablishment state	845	Current state is reestablishment state
In PSM state	846	Current state is PSM state
No data transfer in idle state	847	Data transfer information can not be reported in idle mode

#### 2.4.8. CMS Error Codes

Verbose CMS Error Code	Short CMS Code	Description
unassigned (unallocated) number	1	SMS operation failed due to unassigned number
operator determined barring	8	SMS operation failed due to operator determined barring
call barred	10	SMS operation failed due to call barred
Short message transfer rejected	21	SMS operation failed due to short message transfer being rejected
Destination out of service	27	SMS operation failed due to destination out of service
Unidentified subscriber	28	SMS operation failed due to unidentified subscriber

Facility rejected	29	SMS operation failed due to facility rejected
Unknown subscriber	30	SMS operation failed due to unknown subscriber
Network out of order	38	SMS operation failed due to network out of order
Temporary failure	41	SMS operation failed due to temporary failure
Congestion	42	SMS operation failed due to network congestion
Resources unavailable, unspecified	47	SMS operation failed due to network resources unavailable, unspecified
Requested facility not subscribed	50	SMS operation failed due to requested facility not being subscribed to
Requested facility not implemented	69	SMS operation failed due to requested facility not implemented in network
Invalid short message transfer reference value	81	SMS operation failed due to invalid short message transfer reference value
Invalid message, unspecified	95	SMS operation failed due to invalid message, or other unspecified error
Invalid mandatory information	96	SMS operation failed due to invalid mandatory information
Message type non-existent or not implemented	97	SMS operation failed due to message type non-existent or not implemented
Message not compatible with short message protocol state	98	SMS operation failed due to message not compatible with short message protocol state
Information element non-existent or not implemented	99	Information element non-existent or not implemented
Protocol error, unspecified	111	Protocol error, unspecified
Interworking, unspecified	127	Interworking, unspecified
ME failure	300	General Mobile Equipment failure
SMS ME reserved	301	SMS ME reserved
operation not allowed	302	Failed due to either attempting to send an incorrect PDU (i.e. not a SUBMIT) or due to a currently active submit operation.
operation not supported	303	SMS operation has failed due to it not being supported
invalid PDU mode parameter	304	SMS Operation has failed due to an incorrect PDU mode parameter
invalid text mode parameter	305	SMS Operation has failed due to an incorrect text mode parameter
operation not supported	303	SMS operation has failed due to it not being supported
invalid PDU mode parameter	304	SMS Operation has failed due to an incorrect PDU mode parameter
invalid text mode parameter	305	SMS Operation has failed due to an incorrect text mode parameter
SIM not inserted	310	SMS Operation not allowed: SIM Card hasn't been inserted (or has been removed)
SIM pin necessary	311	SMS Operation not allowed: SIM PIN is required
PH SIM pin necessary	312	PIN required for the SIM the phone is locked to
SIM failure	313	SIM fault has occurred
SIM busy	314	SIM is busy
SIM wrong	315	MEP check failed
SIM PUK required	316	SIM PUK is required
SIM PIN2 required	317	SIM PIN2 is required

SIM PUK2 required	318	SIM PUK2 is required
memory failure	320	SMS Operation failed due to memory error
invalid memory index	321	SMS Operation failed due to invalid SM index
memory full	322	SMS Operation failed due to SM memory full
SMSC address unknown	330	SMS Operation failed due to invalid SMSC address
no network	331	No network coverage
network timeout	332	SMS Operation failed due to network timeout
no+CNMA acknowledgment expected	340	CNMA command executed, but no SMS acknowledgement is expected
Unknown	500	SMS Operation failed, cause unknown
SIM not ready	512	Operation failed due to SIM card not ready
unread records on SIM	513	(Generally unsolicited) There are unread SM on the SIM
PS busy	515	Protocol stack currently running other processes
Couldn't read SMS parameters from SIM	516	SM parameters (VP, SMSC address etc.) read fail from NVRAM
SM BL not ready	517	Protocol stack currently initializing
invalid parameter	518	SMS AT command parameter invalid
ME temporary not available	519	When saving or retrieving SMS info: NVRAM was not available.
Invalid (non-hex) chars in PDU	528	Non hexadecimal characters in entered TPDU data
Incorrect PDU length	529	Entered PDU is either too long or data longer than specified length
Invalid MTI	530	Invalid Message Type Indication on PDU
Invalid (non-hex) chars in address	531	Non hexadecimal characters in entered DA
Invalid address (no digits read)	532	No DA supplied
Incorrect PDU length (UDL)	533	PDU User Data length exceeds allowed size or differs from specified length
Incorrect SCA length	534	Service Centre address too long
Invalid First Octet (should be 2 or 34)	536	Invalid FO for SMS COMMAND
Invalid Command Type	537	Invalid SMS COMMAND type specified
SRR bit not set	538	SRR bit for SMS COMMAND ENQUIRY not set
SRR bit set	539	SRR bit for SMS COMMAND is set
Invalid User Data Header IE	540	Invalid User Data Header Information Element data entered

## 2.5. General Examples

Examples of valid AT command lines, with typical responses are as follows:

ATE1	Echo on
OK	
AT&S0=1	Set S0 to 1
OK	
ATE&S0=1	Echo on and set S0 to 1
OK	
AT+CGDCONT=1,"IP","internet";	
AT+CGDATA="M-PT",1	
CONNECT	

As can be seen from the above, a given AT line can contain several commands. The AT parser will try to interpret each command and return an appropriate response at the end of parsing.

Extended commands require a separator (;) after them in a multiple command line. Each line must be started with 'AT' but multiple commands do not need to be prefixed with 'AT' thereafter.

### 3. AT Command Interface

This section details all standard and proprietary AT commands that are supported by AT interface. The interface supports the following specifications:

- ITU V.250
- 3GPP TS 27.007 Release 14
- 3GPP TS 27.005 Release 14

In the following AT command tables, each AT command has a scope for the 27.010 MUX of either Channel Specific (one 27.010 MUX channel) or Generic (all 27.010 MUX channels). When the serial interface or USB interface is used in 27.010 multiplexer mode, there are multiple AT command channels which are available to use.

Those commands with Channel Specific scope apply only to the channel on which they are received. If the command relates to the setting of profile data, the effect of the profile data change will only apply to that channel.

Those commands with Generic scope apply to the MS as a whole. If the command relates to the setting of profile data, the effect of the profile data change will apply to all channels.

Where applicable, if an AT command parameter has a default value, that value is underlined in the parameter list for that AT Command.

#### 3.1. Guidance on AT Command Syntax Definitions

For some AT commands, some parameters are optional. When this is the case, they are specified as shown in the example below:

```
AT+CRLP=[<iws>[,<mws>[,<T1>[,<N2>[,<ver>[,<T4>]]]]]
```

In this case, all parameters are optional. If an optional parameter is missed out, then the comma must still be inserted if other optional parameters after are entered. For example:

```
AT+CRLP=61,61,,,1,3
```

If, however, no further optional parameters are entered, then no commas are required. For example:

```
AT+CRLP=61,61
```

Note that this command is given as an example only and is not supported by the M5311 NB-IOT software.

### 3.2. Supported AT Commands According to V.250

#### 3.2.1. Overview

The V.250 commands correspond to the commands of AT Hayes-compatible modems applicable for 3GPP TS 27.007.

Command	Description
<b>+++</b>	Escape from data mode
<b>ATE</b>	Set command echo mode
<b>ATH</b>	Disconnect existing connection
<b>ATI</b>	Display product identification information
<b>ATL</b>	Set monitor speaker loudness
<b>ATM</b>	Set monitor speaker mode
<b>ATN1</b>	Some PC modem driver initial setting to handshake at highest speed larger than S37
<b>ATO</b>	Switch from command mode to data mode
<b>ATQ</b>	Set Result code presentation mode
<b>ATSO</b>	Set number of rings before automatically answering the call
<b>ATS1</b>	Read RING counter
<b>ATS2</b>	Set escape sequence character
<b>ATS3</b>	Set command line termination character
<b>ATS4</b>	Set response formatting character
<b>ATS5</b>	Set command line editing character
<b>ATS6</b>	Set pause before blind dialing
<b>ATS7</b>	Set number of seconds to wait for connection completion
<b>ATS8</b>	Set number of seconds to wait when comma dial modifier used
<b>ATS10</b>	Set disconnect delay after indicating the absence of data carrier
<b>ATS12</b>	Set Escape Code Guard Time
<b>ATS25</b>	Set DTR change Time
<b>ATS95</b>	Some PC modem driver initial setting to enable extended result codes
<b>ATV</b>	Set result code format mode
<b>ATX</b>	Set connect result code format and call monitoring
<b>ATZ</b>	Set all current parameters to user defined profile
<b>AT&amp;C</b>	Set DCD function mode
<b>AT&amp;D</b>	Set DTR function mode
<b>AT&amp;F</b>	Set all current parameters to manufacturer defaults
<b>AT&amp;K</b>	Some PC modem driver initial setting to enable RTS/CTS flow control
<b>AT&amp;V</b>	Display current configuration
<b>AT&amp;W</b>	Store current parameter to user defined profile

<b>AT+DR</b>	V.42bis data compression reporting control
<b>AT+DS</b>	V.42bis data compression control
<b>AT+GCAP</b>	Request complete TA capabilities list
<b>AT+GMI</b>	Request manufacturer identification
<b>AT+GMM</b>	Request TA model identification
<b>AT+GMR</b>	Request TA revision identification
<b>AT+GOI</b>	Request global object identification
<b>AT+GSN</b>	Request TA serial number identification (IMEI)
<b>AT+ICF</b>	Set TE-TA control character framing
<b>AT+IFC</b>	Set TE-TA local data flow control
<b>AT+ILRR</b>	Set TE-TA local rate reporting mode
<b>AT+IPR</b>	Set fixed local rate
<b>ATD*99#</b>	Call control command

### 3.2.2. Detailed Description of Commands

#### 3.2.2.1. +++

+++ Escape from data mode	
Execute command	<p>+++</p> <p>Response</p> <p>The escape sequence is used to transfer from in-call data mode to in-call command mode without disconnecting from the remote modem. After a pause, responds with OK. Register S2 can be used to alter the escape character from '+', the default, to any decimal value in the range 0 to 255.</p>
Parameter	None
Scope	Channel Specific
Reference V.250	<p>Note</p> <p>This command is not preceded by AT and does not require a line terminator.</p>

#### 3.2.2.2. ATE

ATE Set command echo mode	
Set command	<p>ATE[&lt;value&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>This setting determines whether the TA echoes characters received from TE during command state.</li> <li>OK</li> </ul>
Parameter	<value> 0 Echo mode off 1 Echo mode on
Scope	Channel Specific

Reference V.250	Note
-----------------	------

### 3.2.2.3. ATH

<b>ATH</b> Disconnect existing connection	
	ATH[n]
Execute command	<p>Response</p> <ul style="list-style-type: none"> <li>• Disconnect existing call by local TE from command line and terminate call</li> <li>• OK, or, if there is an outstanding request for mobile-terminate PDP context activation and AT+CGAUTO is set accordingly, the request is rejected.</li> </ul> <p>Note: OK is issued after circuit 109(DCD) is turned off, if it was previously on.</p>
Parameter	<p>&lt;n&gt; 0 disconnect from line and terminate call 1 ask for outgoing call disconnection</p>
Scope	Channel Specific
Reference V.250, 27.007	<p>Note</p> <ul style="list-style-type: none"> <li>• Note that an outgoing data call can be aborted using any input character.</li> </ul>

### 3.2.2.4. ATI

<b>ATI</b> Display product identification information	
	ATI
Execute command	<p>Response</p> <p>TA issues product information text</p> <p>Example:</p> <ul style="list-style-type: none"> <li>• CMCC</li> <li>• M5311</li> <li>• &lt;Software_Version&gt;</li> <li>• &lt;Hardware_Version&gt;</li> <li>• OK</li> </ul>
Parameter	None
Scope	Channel Specific
Reference V.250	Note

### 3.2.2.5. ATL

<b>ATL</b> Set monitor speaker loudness	
Set command	ATL<value>

	<b>Response</b> <ul style="list-style-type: none"> <li>• No effect</li> <li>• OK</li> </ul>								
Parameter	<b>&lt;value&gt;</b> <table> <tr> <td>0</td> <td>low speaker volume</td> </tr> <tr> <td>1</td> <td>low speaker volume</td> </tr> <tr> <td>2</td> <td>medium speaker volume</td> </tr> <tr> <td>3</td> <td>high speaker volume</td> </tr> </table>	0	low speaker volume	1	low speaker volume	2	medium speaker volume	3	high speaker volume
0	low speaker volume								
1	low speaker volume								
2	medium speaker volume								
3	high speaker volume								
Scope	Generic								
Reference V.250	Note								

### 3.2.2.6. ATM

<b>ATM</b>		<b>Set monitor speaker mode</b>						
Set command		ATM<value>						
Parameter	<b>&lt;value&gt;</b> <table> <tr> <td>0</td> <td>speaker is always off</td> </tr> <tr> <td>1</td> <td>speaker on until TA inform TE that carrier has been detected</td> </tr> <tr> <td>2</td> <td>speaker is always on when TA is off-hook</td> </tr> </table>	0	speaker is always off	1	speaker on until TA inform TE that carrier has been detected	2	speaker is always on when TA is off-hook	
0	speaker is always off							
1	speaker on until TA inform TE that carrier has been detected							
2	speaker is always on when TA is off-hook							
Scope	Generic							
Reference V.250	Note							

### 3.2.2.7. ATN1

<b>ATN1</b>		<b>Some PC modem driver initial setting to handshake at highest speed larger than S37</b>
Set command		ATN1
Parameter		<b>Response</b> <ul style="list-style-type: none"> <li>• Some standard PC modem drivers will send this AT command to initialize the setting, but it is meaningless in the 3GPP standard. Return OK and no effect for the setting.</li> <li>• OK</li> </ul>
Scope	None	
Reference V.250	Note	

### 3.2.2.8. ATO

<b>ATO</b>		<b>Switch from command mode to data mode</b>
Execute		ATO[n]

command	<p>Response</p> <ul style="list-style-type: none"> <li>• TA resumes the connection and switches back from command mode to data mode.</li> <li>• If connection is not successfully resumed           <ul style="list-style-type: none"> <li>◦ NO CARRIER</li> </ul> </li> <li>• else           <ul style="list-style-type: none"> <li>◦ TA returns to data mode from command mode CONNECT &lt;text&gt; Note: &lt;text&gt; only if parameter setting X&gt;0</li> </ul> </li> </ul>
Parameter	<ul style="list-style-type: none"> <li>• &lt;n&gt;           <ul style="list-style-type: none"> <li>◦ 0 switch from command mode to data mode</li> </ul> </li> </ul>
Scope	Channel Specific

### 3.2.2.9. ATQ

ATQ Set result code presentation mode							
	ATQ[<n>]						
Set command	<p>Response</p> <p>This parameter setting determines whether the TA transmits any result code to the TE. Information text transmitted in response is not affected by this setting.</p> <p>If &lt;n&gt;=0: OK</p> <p>If &lt;n&gt;=1: (none)</p>						
Parameter	<table> <tr> <td>&lt;n&gt;</td> <td>0</td> <td>TA transmits result code</td> </tr> <tr> <td></td> <td>1</td> <td>Result codes are suppressed and not transmitted</td> </tr> </table>	<n>	0	TA transmits result code		1	Result codes are suppressed and not transmitted
<n>	0	TA transmits result code					
	1	Result codes are suppressed and not transmitted					
Scope	Channel Specific						
Reference V.250	<p>Note</p> <ul style="list-style-type: none"> <li>• This command only affects V.250 AT commands and not all other AT commands in this specification.</li> </ul>						

### 3.2.2.10. ATSO

ATSO Set number of rings before automatically answering the call	
	ATSO?
Read command	<p>Response</p> <ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>
	ATSO=[<n>]
Set command	<p>Response</p> <ul style="list-style-type: none"> <li>• This parameter setting determines the number of rings before auto-answer.</li> <li>• OK</li> </ul>

Parameter	<n>	0 automatic answering is disabled 1-255 enable automatic answering on the ring number specified
Scope	Channel Specific	
Reference V.250	Note	

### 3.2.2.11. ATS1

<b>ATS1</b>		<b>Ring Counter</b>
Read command	ATS1?	
	Response	<ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>
Set command	ATS1=[<n>]	
	Response	<ul style="list-style-type: none"> <li>• This command will not alter the RING counter, but simply display:</li> <li>• OK</li> </ul>
Parameter	<n>	The number of “RING” strings sent to the TE as a result of receiving an incoming call. 0-255
Scope	Channel Specific	
Reference	Note <ul style="list-style-type: none"> <li>• If “RING” is not displayed on a particular channel due to other settings (such as suppression of all unsolicited events (ATQ)) then this value should not be incremented. This value is reset to 0 when receiving a new incoming call. Note that this command should also be made channel specific as with other ATS&lt;x&gt; commands.</li> </ul>	
Reference V.250	Note	

### 3.2.2.12. ATS2

<b>ATS2</b>		<b>Set escape sequence character</b>
Read command	ATS2?	
	Response	<ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>
Set command	ATS2=[<n>]	
	Response	<ul style="list-style-type: none"> <li>• This parameter setting determines the character recognized by the TA to indicate the escape sequence.</li> <li>• OK</li> </ul>

Parameter	<n> 0-43-255 escape sequence character Note: default 43 = '+'
Scope	Channel Specific
Reference V.250	Note

### 3.2.2.13. ATS3

<b>ATS3</b> Set command line termination character	
Read command	ATS3?
	Response <ul style="list-style-type: none"><li>• &lt;n&gt;</li><li>• OK</li></ul>
Set command	ATS3=[<n>]
	Response <p>This parameter setting determines the character recognized by the TA to terminate an incoming command line. The TA also returns this character in output.</p> <ul style="list-style-type: none"><li>• OK</li></ul>
Parameter	<ul style="list-style-type: none"><li>• &lt;n&gt; 0-13-127 command line termination character<ul style="list-style-type: none"><li>◦ Note: default 13 = CR</li></ul></li></ul>
Scope	Channel Specific
Reference V.250	Note

### 3.2.2.14. ATS4

<b>ATS4</b> Set response formatting character	
Read command	ATS4?
	Response <ul style="list-style-type: none"><li>• &lt;n&gt;</li><li>• OK</li></ul>
Set command	ATS4=[<n>]
	Response <ul style="list-style-type: none"><li>• This parameter setting determines the character generated by the TA for result code and information text.</li><li>• OK</li></ul>
Parameter	<ul style="list-style-type: none"><li>• &lt;n&gt;<ul style="list-style-type: none"><li>◦ 0-10-127 response formatting character</li><li>◦ Note: default 10 = LF</li></ul></li></ul>
Scope	Channel Specific
Reference V.250	Note

**3.2.2.15. ATS5**

<b>ATS5</b>		<b>Set command line editing character</b>
Read command	ATS5?	
	Response	<ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>
Set command	ATS5=[<n>]	
	Response	<ul style="list-style-type: none"> <li>• This parameter setting determines the character recognized by TA as a request to delete from the command line the immediately preceding character.</li> <li>• OK</li> </ul>
Parameter		<ul style="list-style-type: none"> <li>• &lt;n&gt;           <ul style="list-style-type: none"> <li>○ 0-8-127 command line editing character</li> <li>○ Note: default 8 = Backspace</li> </ul> </li> </ul>
Scope	Channel Specific	
Reference V.250	Note	

**3.2.2.16. ATS6**

<b>ATS6</b>		<b>Set pause before blind dialing</b>
Read command	ATS6?	
	Response	<ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>
Set command	ATS6=[<n>]	
	Response	<ul style="list-style-type: none"> <li>• No effect</li> <li>• OK</li> </ul>
Parameter		<ul style="list-style-type: none"> <li>• &lt;n&gt;           <ul style="list-style-type: none"> <li>○ 0-2-10 number of seconds to wait before blind dialing</li> </ul> </li> </ul>
Scope	Channel Specific	
Reference V.250	Note	

**3.2.2.17. ATS7**

<b>ATS7</b>		<b>Set number of seconds to wait for connection completion</b>
Read command	ATS7?	
	Response	<ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>

	AT\$7=[<n>]
Set command	<p>Response</p> <ul style="list-style-type: none"> <li>• This parameter setting determines the amount of time to wait for the connection completion in case of answering or originating a call.</li> <li>• OK</li> </ul>
Parameter	<ul style="list-style-type: none"> <li>• &lt;n&gt;                             <ul style="list-style-type: none"> <li>◦ 1-60-255 number of seconds to wait for connection completion</li> </ul> </li> </ul>
Scope	Channel Specific
Reference V.250	Note

### 3.2.2.18. ATS8

ATS8 Set number of seconds to wait when comma dial modifier	
Read command	<p>ATS8?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>
Set command	<p>AT\$8=[&lt;n&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• No effect</li> <li>• OK</li> </ul>
Parameter	<ul style="list-style-type: none"> <li>• &lt;n&gt;                             <ul style="list-style-type: none"> <li>◦ 0 no pause when comma encountered in dial string</li> <li>◦ 1-2-255 number of seconds to wait</li> </ul> </li> </ul>
Scope	Channel Specific
Reference V.250	Note

### 3.2.2.19. ATS10

ATS10 Set disconnect delay after indicating the absence of data carrier	
Read command	<p>ATS10?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> </ul>
Set command	<p>AT\$10=[&lt;n&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• This parameter setting determines the amount of time that the TA will remain connected in absence of data carrier. If the data carrier is once more detected before disconnect, the TA remains connected.</li> <li>• OK</li> </ul>
Parameter	<ul style="list-style-type: none"> <li>• &lt;n&gt;                             <ul style="list-style-type: none"> <li>◦ 1-15-254 number of tenths seconds of delay</li> </ul> </li> </ul>
Scope	Channel Specific
Reference V.250	<p>Note</p> <ul style="list-style-type: none"> <li>• This command is not used, as there have been issues with in-band DCD</li> </ul>

---

	dropping unexpectedly for CSD calls on some networks.
--	---

---

### 3.2.2.20. ATS12

This command sets the escape code guard time in fiftieths of a second. The escape guard time is used to measure when to detect the +++ escape sequence has been entered by the PC in order to drop out of data mode back to AT command mode.

The guard time determines the time that forms a guard period before and after three escape sequence characters. In order to distinguish an escape sequence from just three escape sequence characters in the data stream there is timing associated to the three escape sequence characters of an escape sequence.

The time between the last byte of the data stream and the first escape sequence character must be at least the guard time and the time between each escape sequence character of the escape sequence must be less than the guard time and no other byte is received after the third escape sequence character for the time of the guard time. If an escape sequence is detected, the OK result code will be sent to the DTE. Otherwise, the DCE will stay in data mode.

For example: “<Guard time>+++<Guard time>”

ATS12 Set Escape Code Guard Time	
Read command	ATS12?  Response <ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> <li>• NB: &lt;n&gt; is in 3 decimal digits format (e.g. Default value is given as 050). If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>• +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Execution command	ATS12=<n>  Response <ul style="list-style-type: none"> <li>• OK</li> </ul> If error is related to wrong AT syntax: <ul style="list-style-type: none"> <li>• +CME ERROR: &lt;err&gt;</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;n&gt; Numeric value of the escape guard time value in 1/50 seconds:               <ul style="list-style-type: none"> <li>◦ 000-255 Number of 20 ms. Default is 050 (1 sec).</li> </ul> </li> </ul>
Scope	Channel Specific
Reference 3GPP TS 27.007	Note <ul style="list-style-type: none"> <li>• Set Escape Code Guard Time command</li> </ul>

```
ATS12=100
```

```
OK
```

```
ATS12?
```

```
100
```

```
OK
```

### 3.2.2.21. ATS25

This command sets the S-register 25 Detect DTR change time that contain the threshold for noticing a change in DTR. This time permits to the modem to ignore DTR before taking action specified by &Dn (See AT&D Circuit 108 behavior).

The value unit is in 1/100 seconds. Default value is set to 5 (50ms delay after a DTR drop before the modem acts on it).

ATS25 Set DTR change time	
	ATS25?
Read command	Response <ul style="list-style-type: none"> <li>• &lt;n&gt;</li> <li>• OK</li> <li>• &lt;n&gt; is in 3 decimal digits format (e.g. Default value is given as 000)</li> <li>• If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>◦ +CME ERROR:&lt;err&gt;</li> </ul> </li> </ul>
	ATS25=<n>
Execution command	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>◦ +CME ERROR:&lt;err&gt;</li> </ul> </li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;n&gt; Numeric value of DTR delay in 10 milliseconds:               <ul style="list-style-type: none"> <li>◦ 000-255 Number of 10 ms. Default is 005.</li> </ul> </li> </ul>
Scope	Channel Specific
Reference 3GPP TS 27.007	Note <ul style="list-style-type: none"> <li>• Set DTR change Time command</li> </ul>

Reference V.250	Note

### 3.2.2.35. AT+GMI

AT+GMI Request manufacturer identification	
Execute command	AT+GMI
	<p>Response</p> <ul style="list-style-type: none"> <li>• TA returns manufacturer identification text.</li> <li>• &lt;manufacturer&gt; OK</li> </ul>

Parameters	<manufacturer>
Scope	Channel specific (response output only on channel which entered the command)
Reference V.250	Note

### 3.2.2.36. AT+GMM

AT+GMM Request TA model identification	
Execute command	AT+GMM Response <ul style="list-style-type: none"> <li>• TA returns product model identification text.</li> <li>• &lt;model&gt;</li> <li>• OK</li> </ul>
Parameters	<model>
Scope	Channel specific (response output only on channel which entered the command)
Reference V.250	Note

### 3.2.2.37. AT+GMR

AT+GMR Request TA revision identification	
Execute command	AT+GMR Response <ul style="list-style-type: none"> <li>• TA reports one or more lines of information text that permit the user to identify the version, revision level or data or other information of the device.</li> <li>• &lt;Revision&gt;</li> <li>• OK</li> </ul>
Scope	Channel specific (response output only on channel which entered the command)
Reference V.250	Note

### 3.2.2.38. AT+GOI

AT+GOI Request global object identification	
Execute command	AT+GOI Response <ul style="list-style-type: none"> <li>• TA reports one or more lines of information text that permit the user to identify the device, based on the ISO system for registering unique object identifiers.</li> </ul>
Parameter	<Object Id> identifier of device type <ul style="list-style-type: none"> <li>○ see X.208, 209 for the format of &lt;Object Id&gt;. This string is customer specific</li> </ul>
Scope	Channel specific (response output only on channel which entered the command)
Reference V.250	Note

**3.2.2.39. AT+GSN**

<b>AT+GSN Request TA serial number identification (IMEI)</b>	
	AT+GSN
Execute command	<p>Response</p> <ul style="list-style-type: none"> <li>• TA reports the IMEI (International Mobile Equipment Identifier) number in information text that permits the user to identify the individual ME device.</li> <li>• &lt;sn&gt;</li> <li>• OK</li> </ul>
Parameter	<sn> IMEI of the telephone (International Mobile station Equipment Identity)
Scope	Channel specific (response output only on channel which entered the command)
Reference V.250	<p>Note</p> <ul style="list-style-type: none"> <li>• The serial number (IMEI) is varied by individual ME device.</li> </ul>

**3.2.2.40. AT+ICF**

<b>AT+ICF Set TE-TA control character framing</b>	
	AT+ICF=?
Test command	<p>Response</p> <ul style="list-style-type: none"> <li>• +ICF:(list of supported &lt;format&gt;s), (list of supported &lt;parity&gt;s)</li> <li>• OK</li> </ul>
	AT+ICF?
Read command	<p>Response</p> <ul style="list-style-type: none"> <li>• +ICF: &lt;format&gt;,&lt;parity&gt; OK           <ul style="list-style-type: none"> <li>◦ Note: This framing is applied for command state</li> </ul> </li> </ul>
	AT+ICF=[<format>,[<parity>]]
Set command	<p>Response</p> <ul style="list-style-type: none"> <li>• This parameter setting determines the serial interface character framing format and parity received by TA from TE.</li> <li>• Note: +IPR=0 forces +ICF=0</li> <li>• OK</li> </ul>

Parameter	<p>Note: The parity field is ignored if the format field specifies no parity.</p> <table border="0"> <tr> <td>&lt;format&gt;</td><td></td></tr> <tr> <td>1</td><td>8 data 0 parity 2 stop</td></tr> <tr> <td>2</td><td>8 data 1 parity 1 stop</td></tr> <tr> <td>3</td><td>8 data 0 parity 1 stop</td></tr> <tr> <td>4</td><td>7 data 0 parity 2 stop</td></tr> <tr> <td>5</td><td>7 data 1 parity 1 stop</td></tr> <tr> <td>6</td><td>7 data 0 parity 1 stop</td></tr> <tr> <td>&lt;parity&gt;</td><td></td></tr> <tr> <td>0</td><td>odd</td></tr> <tr> <td>1</td><td>even</td></tr> </table> <p>mark (1)</p> <p>space (0)</p>		<format>		1	8 data 0 parity 2 stop	2	8 data 1 parity 1 stop	3	8 data 0 parity 1 stop	4	7 data 0 parity 2 stop	5	7 data 1 parity 1 stop	6	7 data 0 parity 1 stop	<parity>		0	odd	1	even
<format>																						
1	8 data 0 parity 2 stop																					
2	8 data 1 parity 1 stop																					
3	8 data 0 parity 1 stop																					
4	7 data 0 parity 2 stop																					
5	7 data 1 parity 1 stop																					
6	7 data 0 parity 1 stop																					
<parity>																						
0	odd																					
1	even																					
Scope	Channel Specific																					
Reference V.250	<p>Note</p> <ul style="list-style-type: none"> <li>• Not applicable to USB interface.</li> </ul>																					

### 3.2.2.41. AT+IFC

<b>AT+IFC Set TE-TA local data flow control</b>		
Test command	AT+IFC=?	
	Response	<ul style="list-style-type: none"> <li>• +IFC:(list of supported &lt;dce_by_dte&gt;s), (list of supported &lt;dte_by_dce&gt;s)</li> <li>• OK</li> </ul>
Read command	AT+IFC?	
	Response	<ul style="list-style-type: none"> <li>• +IFC:&lt;dce_by_dte&gt;,&lt;dte_by_dce&gt;</li> <li>• OK</li> </ul> <p>Note: This flow control is applied for data mode</p>
Set command	AT+IFC=[<dce_by_dte>[,<dte_by_dce>]]	
	Response	<ul style="list-style-type: none"> <li>• This parameter setting determines the data flow control on the serial interface for data mode.</li> <li>• OK</li> </ul>
Parameter	<dce_by_dte> 0 None 1 XON/XOFF, don't pass characters on to data stack 2 line 133: Ready for Receiving	<p>&lt;dce_by_dte&gt; specifies the method will be used by TE at receive of data from TA</p> <p>0 None</p> <p>1 XON/XOFF, don't pass characters on to data stack</p> <p>2 line 133: Ready for Receiving</p>
	<dte_by_dce> 0 None 1 XON/XOFF 2 line 106: Clear to send(CTS)	<p>&lt;dte_by_dce&gt; specifies the method will be used by TA at receive of data from TE</p> <p>0 None</p> <p>1 XON/XOFF</p> <p>2 line 106: Clear to send(CTS)</p>
Scope	Channel Specific	

Reference V.250	<p>Note</p> <ul style="list-style-type: none"> <li>• M5311 uses line 105 (RTS) for this method.</li> <li>• For Software flow control, this sets on a per channel basis when using the 27.010 MUX. I.e. flow control characters are sent/received within the 27.010 MUX frame as part of the data.</li> <li>• For hardware flow control the setting will apply to all channels routed through one connection level (e.g. USB, UART).</li> </ul>
-----------------	--

### 3.2.2.42. AT+ILRR

<b>AT+ILRR</b>		<b>Set TE-TA local rate reporting mode</b>
Test command	AT+ILRR=?	
	Response	<ul style="list-style-type: none"> <li>• +ILRR:(list of supported &lt;value&gt;s OK</li> </ul>
Read command	AT+ILRR?	
	Response	<ul style="list-style-type: none"> <li>• +ILRR: &lt;value&gt; OK</li> </ul>
Set command	AT+ILRR=<value>	
	Response	<ul style="list-style-type: none"> <li>• This parameter setting determines whether an intermediate result code of local rate is reported at connection establishment. The rate is applied after the result code of the connection is transmitted to TE.</li> <li>• OK</li> </ul>
Unsolicited result code	• +ILLR:<rate>	Note: It indicates port rate settings on connection.
Parameter	<value>	
	0      Disables reporting of local port rate 1      Enables reporting of local port rate	
Scope	<rate>	port rate setting on call connection in Baud per second
	9600 19200 38400 57600 115200 230400 460800	
Reference V.250	Note	

**3.2.2.43. AT+IPR**

<b>AT+IPR</b>		<b>Set fixed local rate</b>
Test command		<p>AT+IPR=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +IPR: (list of supported auto detectable &lt;rate&gt;s),(list of supported fixed-only&lt;rate&gt;s)</li> <li>• OK</li> </ul>
Read command		<p>AT+IPR?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +IPR: &lt;rate&gt;</li> <li>• OK</li> </ul>
Set command		<p>AT+IPR=&lt;rate&gt;</p> <p>Response</p> <ul style="list-style-type: none"> <li>• This parameter setting determines the data rate of the TA on the serial interface. The rate of command takes effect following the issuance of any result code associated with the current command line.</li> <li>• OK</li> </ul>
Parameter		<p>&lt;rate&gt; Baud-rate per second</p> <p>0(auto baud rate)</p> <p>110</p> <p>300</p> <p>1200</p> <p>2400</p> <p>4800</p> <p>9600</p> <p>19200</p> <p>38400</p> <p>57600</p> <p>115200</p> <p>230400</p> <p>460800</p> <p>921600</p>
Scope		Channel Specific
Reference V.250		<p>Note</p> <ul style="list-style-type: none"> <li>• The setting will apply to all channels routed through one connection level for UART.</li> <li>• Not applicable for USB interface.</li> <li>• AT+IPR=0, auto baud rate takes effect following these three cases: 1. Commands AT+IPR=0 returns 'OK'. 2. wake up from sleep. 3. Software/Hardware reboot. Only one of these three cases can trigger an adaptive baud rate.</li> </ul>

**3.2.2.44. ATD\*99#**

This command is used by the PC to make a packet domain connection using the standard AT dial command.

Note that it is possible for ATD\*99# to re-use an already active context as long as the context was activated

with no data connection on the same channel (i.e. activated with AT+CGACT).

<b>ATD</b> <b>Request Packet Domain Service</b>	
<b>Execute command</b>	<pre>ATD*&lt;GPRS_SC&gt;[*[&lt;called_address&gt;] [*[&lt;L2P&gt;[*[&lt;cid&gt;[,&lt;cid&gt;[,...]]]]]]#</pre> <p><b>Response</b></p> <ul style="list-style-type: none"> <li>UE attempts to set up a mobile originated PDP context.</li> </ul> <p><b>Note:</b> This command may be aborted generally by receiving a character during execution. The aborting is not possible during some states of PDP context activation.</p> <ul style="list-style-type: none"> <li>If no dial tone and (parameter setting X=2 or X=4) <b>NO DIALTONE</b></li> <li>If busy and (parameter setting X=3 or X=4) <b>BUSY</b></li> <li>If a PDP context cannot be established <b>NO CARRIER</b></li> <li>If connection successful <b>CONNECT</b> UE switches to packet switched data state.</li> <li>When UE returns to command mode after PDP MO context deactivation <b>OK</b></li> </ul>
<b>Parameter</b>	<p>&lt;GPRS_SC&gt;      GPRS Service code. Digit string value 99 identifies a request to use PSD.</p> <p>&lt;called_address&gt;      String identifying called party in address space applicable to PDP. This parameter is not supported.</p> <p>&lt;L2P&gt;      Layer 2 protocol to be used.  90001: Raw TCP/IP (No L2P required). Note that username and password must be set for the &lt;cid&gt; using the appropriate proprietary AT command (AT+CGAUTH).</p> <p>&lt;cid&gt;      Digit string specifying a particular PDP context definition (see AT+GCDCONT, AT+GCDSCONT).</p>
<b>Scope</b>	Channel Specific

Reference 3GPP TS 27.007	<p>Note</p> <p>&lt;L2P&gt; value 90001 is used only for communication to a peer which supports raw TCP/IP routing to the modem and the additional AT commands required to support setup of IP configuration information.</p> <p>Note that if the &lt;cid&gt; value is omitted (i.e. just <b>ATD*99#</b> is entered) then the following takes place:</p> <ul style="list-style-type: none"><li>• If the entity has a defined cid or a cid is defined but has an invalid entity, we will use that cid if the cid is not provided</li><li>• If the above condition is not met, we will use the next free cid</li><li>• In addition, we also check the cid is not reserved for a Mobile Terminated (MT) PDP context (by using AT*MMTPDPCID command). If it is reserved, we will skip it and continue to find a cid according to the rules above</li><li>• When a Mobile Terminated PDP context is incoming, we firstly check whether a cid has been reserved for MT PDP or not (using the AT*MMTPDPCID command). If not, we will get a free cid according to the rules above</li></ul> <p>Note that it is better to enter the &lt;cid&gt; value as the behavior of the dialup will be more predictable.</p> <p>When a new cid is used, the PDP context information associated with the cid (APN, etc) is copied from the default PDP context information stored in the background layer using AT command AT*MCGDEFCONT.</p>
--------------------------	---

### 3.3. Supported AT Commands According to 3GPP TS 27.007

#### 3.3.1. Overview

The 3GPP TS 27.007 commands are for remote control of NB-IoT functionality.

Command	Description
<b>AT+CCLK</b>	Clock
<b>AT+CEER</b>	Extended error report
<b>AT+CFUN</b>	Set phone functionality
<b>AT+CGACT</b>	Context activation
<b>AT+CGATT</b>	GPRS/Packet Domain attach or detach
<b>AT+CGDATA</b>	Enter Data State
<b>AT+CGDCONT</b>	Define PDP context
<b>AT+CGMI</b>	Request manufacturer identification
<b>AT+CGMM</b>	Request model identification
<b>AT+CGMR</b>	Request revision identification
<b>AT+CGOI</b>	Request global object identification
<b>AT+CGPADDR</b>	Show PDP address
<b>AT+CGREG</b>	Network registration status
<b>AT+CEREG</b>	EPS network registration status
<b>AT+CGCONTRDP</b>	PDP context read dynamic parameters
<b>AT+CGSN</b>	Request product serial number identification (identical with +GSN)
<b>AT+CIMI</b>	Request international mobile subscriber identity
<b>AT+CLCK</b>	Facility lock
<b>AT+CMAR</b>	Master Reset
<b>AT+CMEE</b>	Report mobile equipment error
<b>AT+CMUX</b>	3GPP TS 27.010 Multiplexer control
<b>AT+COPN</b>	Read operator names
<b>AT+COPS</b>	Operator selection
<b>AT+CESQ</b>	Extended signal quality
<b>AT+CSQ</b>	Signal Quality
<b>AT+CPIN</b>	Enter pin
<b>AT+CPOL</b>	Preferred operator list
<b>AT+CPWD</b>	Change password
<b>AT+CR</b>	Service reporting control
<b>AT+CREG</b>	Network registration
<b>AT+CSIM</b>	Generic SIM Access
<b>AT+CRSM</b>	Restricted SIM access
<b>AT+CSCS</b>	Select TE character set

<b>AT+CTZR</b>	Time Zone Reporting
<b>AT+CTZU</b>	Automatic Time Zone Update
<b>AT+CPLS</b>	Selection of preferred PLMN List
<b>AT+CPSMS</b>	Power saving mode selection
<b>AT+CIPCA</b>	Enable/disable activation of PDN connection on attach.
<b>AT+CCIOTOPT</b>	CIoT optimization configuration
<b>AT+CEDRXS</b>	eDRX setting
<b>AT+CEDRXRDP</b>	eDRX read dynamic parameters
<b>AT+CGAPNRC</b>	Report APN uplink rate control information
<b>AT+CSCON</b>	Query and generate URC for signaling connection station (CONNECTED or IDLE)
<b>AT+CCHO</b>	Open UICC Logical Channel
<b>AT+CCHC</b>	Close UICC Logical Channel
<b>AT+CGLA</b>	Generic UICC Logical Channel Access
<b>AT+CRLA</b>	Restricted UICC Logical Channel Access
<b>AT+CPINR</b>	Remaining PIN Retries
<b>AT+CGPIAF</b>	Printing IP Address Format
<b>AT+CGEREP</b>	Packet Domain Event Reporting
<b>AT+CGDEL</b>	Delete non-active PDP Context(s)
<b>AT+CGAUTH</b>	Define PDP Context Authentication Parameters

### 3.3.2. Detailed Descriptions of Commands

#### 3.3.2.1. AT+CCLK

AT+CCLK	Clock
Read command	AT+CCLK?
	Response • +CCLK: <time> • OK • +CME ERROR: <err>
Set command	AT+CCLK=<time>
	Response • OK • +CME ERROR: <err>

Parameters	<p>&lt;time&gt; string type value;          format is "yy/MM/dd, hh:mm:ss±zz"; where characters indicate year          (two last digits), month, day, hour, minutes and seconds and time zone          (indicates the difference, expressed in quarters of an hour, between the          local time and GMT; range -47...+48). E.g. 6th of May 1994, 22:10:00 GMT+2          hours equals to "94/05/06,22:10:00+08"</p> <p>Note: If MT does not support time zone information then the three last characters of &lt;time&gt; are not returned by +CCLK?.</p>
Scope	<ul style="list-style-type: none"> <li>○ Channel specific for read command</li> <li>○ Generic for set command</li> </ul>
Reference 3GPP TS 27.007	Note

### 3.3.2.2. AT+CEER

AT+CEER	Extended error report
Execute command	<p>AT+CEER</p> <p>Response</p> <ul style="list-style-type: none"> <li>• TA returns an extended report of the reason for the last call release.</li> <li>• +CEER: &lt;report&gt;</li> <li>• OK</li> </ul>
Scope	Channel Specific
Reference 3GPP TS 27.007	<p>Note</p> <ul style="list-style-type: none"> <li>• Note that the cause display mode is set using the AT command AT*MCEERMODE. The response can be in either textual format (default) or numeric (according to 3GPP cause values). For more details see the AT*MCEERMODE command description.</li> </ul>

### 3.3.2.3. AT+CFUN

AT+CFUN	Set phone functionality
Test command	<p>AT+CFUN=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CFUN: (list of supported &lt;fun&gt;s), (list of supported &lt;rst&gt;s)</li> <li>• OK</li> <li>• +CME ERROR: &lt;err&gt;</li> </ul>
Read command	<p>AT+CFUN?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CFUN: &lt;fun&gt;</li> <li>• OK</li> <li>• +CME ERROR: &lt;err&gt;</li> </ul>

Set command	AT+CFUN=<fun>[,<rst>]												
	<p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• +CME ERROR: &lt;err&gt;</li> </ul>												
Parameters	<p>&lt;fun&gt;</p> <table> <tr><td>0</td><td>minimum functionality</td></tr> <tr><td>1</td><td>full functionality (Default)</td></tr> <tr><td>4</td><td>disable phone both transmit and receive RF circuits</td></tr> <tr><td>7</td><td>disable phone SIM only. Transmit and receive circuits still active</td></tr> <tr><td>5,6,8...127</td><td>reserved for manufacturers as intermediate states between full and minimum functionality</td></tr> </table> <p>&lt;rst&gt;</p> <table> <tr><td>0</td><td>do not reset the MT before setting it to &lt;fun&gt; power levelOnly set to &lt;fun&gt; power level after MT has been reset, and for all subsequent resets.Do not reset MT before setting it to &lt;fun&gt; power level and save &lt;fun&gt; value in NVRAM for all subsequent resets.</td></tr> </table>	0	minimum functionality	1	full functionality (Default)	4	disable phone both transmit and receive RF circuits	7	disable phone SIM only. Transmit and receive circuits still active	5,6,8...127	reserved for manufacturers as intermediate states between full and minimum functionality	0	do not reset the MT before setting it to <fun> power levelOnly set to <fun> power level after MT has been reset, and for all subsequent resets.Do not reset MT before setting it to <fun> power level and save <fun> value in NVRAM for all subsequent resets.
0	minimum functionality												
1	full functionality (Default)												
4	disable phone both transmit and receive RF circuits												
7	disable phone SIM only. Transmit and receive circuits still active												
5,6,8...127	reserved for manufacturers as intermediate states between full and minimum functionality												
0	do not reset the MT before setting it to <fun> power levelOnly set to <fun> power level after MT has been reset, and for all subsequent resets.Do not reset MT before setting it to <fun> power level and save <fun> value in NVRAM for all subsequent resets.												
Scope	<ul style="list-style-type: none"> <li>○ Channel Specific for test and read command</li> <li>○ Generic for set command</li> </ul>												
Reference 3GPP TS 27.007	<p>Note</p> <p>Settings 2 and 3 of &lt;fun&gt; are not supported.</p> <ul style="list-style-type: none"> <li>• &lt;fun&gt; = 0 performs all system shutdown actions without removing power. It will take some time to return ok or error, during this time, other At Command input will not responded. The response time does not exceed 90s.</li> <li>• &lt;fun&gt; = 1 performs a system startup</li> <li>• &lt;rst&gt; = 0 shall always be the default if the &lt;rst&gt; parameter is not given.</li> </ul> <p>Note that &lt;rst&gt; of 1 and 2 does not reset the modem as described in the 27.007 specification. They simply set a value in NVRAM so that &lt;fun&gt; value is activated on all subsequent modem resets.</p>												

### 3.3.2.4. AT+CGACT

The execution command is used to activate or deactivate the specified PDP context (s). After the command has completed, the UE remains in V.250 command state. If any PDP context is already in the requested state, the state for that context remains unchanged.

If the UE is not PS attached when the activation form of the command is executed, the UE first performs a PS attach and then attempts to activate the specified contexts.

Note that in the 27.007 specification there is the following statement:

- For EPS, if an attempt is made to disconnect the last PDN connection, then the UE responds with ERROR or, if extended error responses are enabled, a +CME ERROR.

This applies when use of CID0 is enabled for the PDN connection activated during attach. In fact, entering AT+CGACT=<0 or 1>,0 will generate ERROR response.

If CID0 mode is not enabled then it is possible to enter the AT+CGACT command to deactivate the last PDN connection from the point of view of the middleware. When the user uses AT+CGACT to disconnect the last PDN connection the following occurs:

- The PDN connection is preserved in the protocol stack

- The PDN connection is disconnected at the middleware, so the <cid> for the PDN connection is marked as deactivated
- OK response is returned rather than ERROR

For EPS, the activation request for an EPS bearer resource will be answered by the network by either an EPS dedicated bearer activation or EPS bearer modification request. The request must be accepted by the UE before the PDP context can be set in to established state.

- If no <cid>s are specified the activation form of the command activates all defined contexts.
- If no <cid>s are specified the deactivation form of the command deactivates all active contexts.

The read command returns the current activation states for all the defined PDP contexts.

The test command is used for requesting information on the supported PDP context activation states.

AT+CGACT                    PDP Context activate or deactivate	
Test command	AT+CGACT=?
	<p>Response</p> <ul style="list-style-type: none"> <li>• +CGACT: (list of supported &lt;state&gt;s)</li> <li>• OK</li> </ul>
Read command	AT+CGACT?
	<p>Response</p> <ul style="list-style-type: none"> <li>• +CGACT:&lt;cid&gt;,&lt;state&gt;[&lt;CR&gt;&lt;LF&gt;+CGACT: &lt;cid&gt;,&lt;state&gt;[...]]</li> <li>• OK</li> </ul>
Set command	AT+CGACT=[<state>[,<cid> [,<cid>[,...]]]]
	<p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• NO CARRIER</li> <li>• ERROR</li> </ul>
Parameter	<p>&lt;state&gt;                    indicates the state of PDP context activation</p> <p>    0                        deactivated</p> <p>    1                        activated</p> <p>    Other                    reserved and will result in an ERROR response to the execution command.</p> <p>&lt;cid&gt;                    a numeric parameter which specifies a particular PDP context definition (see +CGDCONT command)</p>
Scope	<ul style="list-style-type: none"> <li>◦ Channel Specific for test and read command</li> <li>◦ Generic for set command</li> </ul>
Reference 3GPP TS 27.007	<p>Note</p> <ul style="list-style-type: none"> <li>• If context is deactivated successfully, NO CARRIER is returned</li> <li>• If CID0 for PDN activated during attach is enabled, then AT+CGACT=&lt;0 or 1&gt;,0 will cause ERROR response.</li> </ul>

### 3.3.2.5. AT+CGATT

AT+CGATT GPRS/Packet Domain attach or detach							
Test command	<p>AT+CGATT=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CGATT: (list of supported &lt;state&gt;s)</li> <li>• OK</li> </ul>						
Read command	<p>AT+CGATT?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CGATT: &lt;state&gt;</li> <li>• OK</li> </ul>						
Set command	<p>AT+CGATT=[&lt;state&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>						
Parameter	<p>&lt;state&gt; indicates the state of GPRS/Packet Domain attachment</p> <table> <tr> <td>0</td> <td>detached</td> </tr> <tr> <td>1</td> <td>attached</td> </tr> <tr> <td>Other</td> <td>reserved and will result in an ERROR response to the execution command.</td> </tr> </table>	0	detached	1	attached	Other	reserved and will result in an ERROR response to the execution command.
0	detached						
1	attached						
Other	reserved and will result in an ERROR response to the execution command.						
Scope	<ul style="list-style-type: none"> <li>○ Channel Specific for test and read command</li> <li>○ Generic for set command</li> </ul>						
Reference 3GPP TS 27.007	<ul style="list-style-type: none"> <li>• &lt;state&gt;= 0 performs GPRS/Packet Domain detach actions. It will take some time to return ok or error, during this time, other At Command input will not responded. The response time does not exceed 90s.</li> </ul>						

### 3.3.2.6. AT+CGDATA

This command is used activate a PDP context / EPS bearer rather than using the ATD\*99# method. It will be used by the Packet Transport mechanism for activating a PDP context / EPS bearer.

Note that it is possible for AT+CGDATA to re-use an already active context as long as the context was activated with no data connection on the same channel (i.e. activated with AT+CGACT).

AT+CGDATA Enter Data State	
Test command	<p>AT+CGDATA=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CGDATA: (list of supported &lt;L2P&gt;s)</li> <li>• OK</li> </ul>

### 3.3.2.7. AT+CGDCONT

The set command specifies PDP context parameter values for a PDP context identified by the (local) context identification parameter, <cid>. The number of PDP contexts that may be in a defined state at the same time is given by the range returned by the test command.

For EPS the PDN connection and its associated EPS default bearer is identified herewith. For EPS the <PDP\_addr> shall be omitted.

A special form of the set command, +CGDCONT= <cid> causes the values for context number <cid> to become undefined.

The read command returns the current settings for each defined context.

The test command returns values supported as a compound value. If the UE supports several PDP types, <PDP\_type>, the parameter value ranges for each <PDP\_type> are returned on a separate line.

The feature "initial PDP context" may be supported and is a manufacturer specific option. For this option, the context with <cid>=0 (context number 0) is defined upon startup and does not need to be created with the +CGDCONT command. The initial PDP context has particular manufacturer specific default settings disassociated with any other default settings of +CGDCONT. When in E-UTRAN, the initial PDP context is automatically activated by the MT following a successful registration to the network depending on the setting of AT+CIPCA command. If all active contexts are deactivated, the initial PDP context can be (re)established. This is manufacturer specific and depends on the current RAT as well as how the active contexts are deactivated.

AT+CGDCONT Define the PDP context	
	AT+CGDCONT=?
Test command	Response +CGDCONT: (range of supported <cid>s),<PDP_type>,,,(list of supported <d_comp>s),(list of supported <h_comp>s),(list of supported <IPv4AddrAlloc>s),(list of supported <request_type>s),(list of supported <P-CSCF_discovery>s),(list of supported <IM_CN_Signalling_Flag_Ind>s),(list of supported <NSLP1>s),(list of supported <securePCO>s),(list of supported <IPv4_MTU_discovery>s),(list of supported

Set command	AT+CGREG=[<n>]
	Response <ul style="list-style-type: none"> <li>• OK</li> </ul>

Parameter	<p>&lt;n&gt;</p> <p>0 disable network registration unsolicited result code</p> <p>1 enable network registration unsolicited result code +CGREG: &lt;stat&gt;</p> <p>2 enable network registration and location information unsolicited result code +CGREG: &lt;stat&gt;[,&lt;lac&gt;,&lt;ci&gt;[,&lt;AcT&gt;,&lt;rac&gt;]]]</p> <p>&lt;stat&gt;</p> <p>0 not registered, ME is not currently searching a new operator to register to</p> <p>1 registered, home network</p> <p>2 not registered, but ME is currently searching for a new operator to register to</p> <p>3 registration denied</p> <p>4 unknown</p> <p>5 registered, roaming</p> <p>6 registered for "SMS only", home network (applicable only when &lt;Act&gt; indicates E-UTRAN)</p> <p>7 registered for "SMS only", roaming (applicable only when &lt;Act&gt; indicates E-UTRAN)</p> <p>&lt;lac&gt; string type; two byte location area code in hexadecimal format (e.g. "00C3" equals 195 in decimal)</p> <p>&lt;ci&gt; string type; four byte UTRAN/GERAN/E-UTRAN cell ID in hexadecimal format</p> <p>&lt;AcT&gt; access technology of the registered network</p> <p>9 NB-IoT</p> <p>&lt;rac&gt; string type; one byte routing area code in hexadecimal format</p>
Scope	Channel Specific
Reference 3GPP TS 27.007	Note <ul style="list-style-type: none"> <li>The set command controls the presentation of an unsolicited result code +CGREG: &lt;stat&gt; when &lt;n&gt;=1 and there is a change in the UE's GPRS network registration status, or code +CEREG: &lt;stat&gt;[,&lt;lac&gt;,&lt;ci&gt;[,&lt;AcT&gt;,&lt;rac&gt;]] when &lt;n&gt;=2 and there is a change of the network cell.</li> <li>For NB-IoT product, only &lt;AcT&gt; value of 9 is valid.</li> </ul>

### 3.3.2.14. AT+CEREG

The set command controls the presentation of an unsolicited result code +CEREG: <stat> when <n>=1 and there is a change in the UE's EPS network registration status, or result code +CEREG: <stat>[,<tac>,<ci>[,<AcT>]] when <n>=2 and there is a change of the network cell.

NOTE: If the EPS UE also supports circuit mode services and/or GPRS services, the +CREG command and +CREG: result codes and/or the +CGREG command and +CGREG: result codes apply to the registration status and location information for those services.

The read command returns the status of result code presentation and an integer <stat> that shows whether the network has currently indicated the registration of the UE. Location information elements <tac>, <ci> and <AcT> are returned only when <n>=2 and UE is registered in the network.

AT+CEREG	EPS Network Registration Status
Test Command	AT+CEREG=?

	<p>Response</p> <ul style="list-style-type: none"> <li>• +CEREG: (list of supported &lt;n&gt;s)</li> <li>• OK</li> </ul>

### 3.3.2.15. AT+CGCONTRDP

The execution command returns the relevant information for a primary PDP Context established by the network with the primary context identifier <cid>. If the context cannot be found an ERROR response is returned.

If the UE has dual stack capabilities, two lines of information are returned per <cid>. First one line with the IPv4 parameters followed by one line with the IPv6 parameters.

If the parameter <cid> is omitted, the relevant information for all established PDP contexts are returned.

NOTE: The dynamic part of the PDP context will only exist if established by the network.

The test command returns a list of <cid>s associated with active contexts.

### 3.3.2.23. AT+CESQ

Execution command returns received signal quality parameters. If the current serving cell is not a GERAN cell, <rssi> and <ber> are set to value 99. If the current serving cell is not a UTRA FDD or UTRA TDD cell, <rscp> is set to 255. If the current serving cell is not a UTRA FDD cell, <ecno> is set to 255. If the current serving cell is not an E-UTRA cell, <rsrq> and <rsrp> are set to 255.

Test command returns values supported as compound values.

Scope	<ul style="list-style-type: none"> <li>○ Channel Specific for test command</li> <li>○ Generic for set command</li> </ul>
Reference 3GPP TS 27.007	Note

### 3.3.2.36. AT+CPSMS

The set command controls the setting of the UEs power saving mode (PSM) parameters. The command controls whether the UE wants to apply PSM or not, as well as the requested extended periodic TAU value in E-UTRAN and the requested Active Time value. See the unsolicited result codes provided by commands +CEREG for the Active Time value and the extended periodic TAU value that are allocated to the UE by the network in E-UTRAN.

A special form of the command can be given as +CPSMS=2. In this form the use of PSM will be disabled and data for all parameters in the command +CPSMS will be removed or, if available, set to the manufacturer specific default values.

The read command returns the current parameter values.

The test command returns the supported <mode>s and the value ranges for the requested extended periodic TAU value in E-UTRAN and the requested Active Time value as compound values.

The default value, if available, is manufacturer specific.</li> </ul>
Scope		Generic
Reference		Note

### 3.3.2.37. AT+CIPCA

The set command controls whether an initial PDP context (see sub-clause 10.1.0) shall be established

automatically following an attach procedure when the UE is attached to GERAN or UTRAN RATs and whether the UE is attached to E-UTRAN with or without a PDN connection.

- For  $<n>\neq 0$ , deactivating the last (active) PDP context can lead to a (re)establishment of the initial PDP context. Changing setting of  $<n>$  from 0 to 1 will cause an immediate attempt to (re)establish the initial PDP context if no PDP context is active. Changing  $<n>$  from 0 to 2 will if not roaming cause an immediate attempt to (re)establish the initial PDP context if no other PDP context is active. The value of  $<n>=3$  applies to E-UTRAN RATs and does not change the setting of PDP context activation in GERAN or UTRAN RATs. Changing  $<n>$  will never cause a PDP context deactivation.
- For  $<\text{AttachWithoutPDN}>=1$ , the EPS Attach is performed without a PDN connection.

Note, for this command, the term roaming corresponds to being registered to a VPLMN which is not equivalent to HPLMN or EHPLMN.

The read command returns the current setting of the command.

The test command returns values supported as a compound value.

### 3.3.2.38. AT+CCIOTOPT

The set command controls which CloT EPS optimizations the UE indicates as supported and preferred in the ATTACH REQUEST and TRACKING AREA UPDATE REQUEST messages. The command also allows reporting of the CloT EPS optimizations that are supported by the network. A UE supporting CloT functionality may support control plane CloT EPS optimization or user plane CloT EPS optimization or both (see 3GPP TS 24.301, sub-clause 9.9.3.34). Based on the application characteristics the UE may prefer to be registered for control plane CloT EPS optimization or for user plane CloT EPS optimization (see 3GPP TS 24.301, sub-clause 9.9.3.0B).

Further the network may support control plane CloT EPS optimization or user plane CloT EPS optimization or both (see 3GPP TS 24.301, sub-clause 9.9.3.12A).

The set command is used also to control the unsolicited result code +CCIOTOPTI. An unsolicited result code +CCIOTOPTI: <supported\_Network\_opt> is used to indicate the supported CloT EPS optimizations by the network.

The read command returns the current settings for supported and preferred CloT EPS optimizations and the current status of unsolicited result code +CCIOTOPTI.

Scope	Channel Specific								
Reference	Note								

### 3.3.2.39. AT+CEDRXS

The set command controls the setting of the UEs eDRX parameters. The command controls whether the UE wants to apply eDRX or not, as well as the requested eDRX value for each specified type of access technology.

The set command also controls the presentation of an unsolicited result code +CEDRXP: <AcT-type>[,<Requested\_eDRX\_value>[,<NW-provided\_eDRX\_value>[,<Paging\_time\_window>]]] when <n>=2 and there is a change in the eDRX parameters provided by the network.

A special form of the command can be given as +CEDRXS=3. In this form, eDRX will be disabled and data for all parameters in the command +CEDRXS will be removed or, if available, set to the manufacturer specific default values.

AT+CEDRXS                    eDRX Setting	
Test Command	<p>AT+CEDRXS=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CEDRXS: (list of supported &lt;mode&gt;s),(list of supported &lt;AcT-type&gt;s),(list of supported &lt;Requested_eDRX_value&gt;s)</li> <li>• OK</li> </ul>

### 3.3.2.41. AT+CGAPNRC

This execution command returns the APN rate control parameters (see 3GPP TS 24.008) associated to the provided context identifier <cid>.

If the parameter <cid> is omitted, the APN rate control parameters for all active PDP contexts are returned. The test command returns a list of <cid>s associated with secondary and non-secondary active PDP contexts.

AT+CGAPNRC APN Rate Control	
Test Command	<p>AT+CGAPNRC=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>+CGAPNRC: (list of &lt;cid&gt;s associated with active contexts)</li> <li>OK</li> </ul>
Execution command	<p>AT+CGAPNRC[=&lt;cid&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>[+CGAPNRC: &lt;cid&gt;[,&lt;Additional_exception_reports&gt;[,&lt;Uplink_time_unit&gt;[, &lt;Maximum_uplink_rate&gt;]]]]</li> <li>[&lt;CR&gt;&lt;LF&gt;+CGAPNRC: &lt;cid&gt;[,&lt;Additional_exception_reports&gt;[,&lt;Uplink_time_unit&gt;[, &lt;Maximum_uplink_rate&gt;]]]]</li> <li>[...]]]</li> <li>OK</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>&lt;cid&gt;: integer type; specifies a particular PDP context definition (see the +CGDCONT and +CGDSCONT commands).</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;Additional_exception_reports&gt;: integer type; indicates whether additional exception reports are allowed to send when the maximum uplink rate is reached. This refers to bit 4 of octet 1 of the APN rate control parameters IE as specified in 3GPP TS 24.008 sub-clause 10.5.6.3.2.           <ul style="list-style-type: none"> <li>0 Additional_exception_reports at maximum rate reached are not allowed to be sent.</li> <li>1 Additional_exception_reports at maximum rate reached are allowed to send.</li> </ul> </li> <li>• &lt;Uplink_time_unit&gt;: integer type; specifies the time unit to be used for the maximum uplink rate. This refers to bits 1 to 3 of octet 1 of the APN rate control parameters IE as specified in 3GPP TS 24.008 sub-clause 10.5.6.3.2.           <ul style="list-style-type: none"> <li>0 unrestricted</li> <li>1 minute</li> <li>2 hour</li> <li>3 day</li> <li>4 week</li> </ul> </li> <li>• &lt;Maximum_uplink_rate&gt;: integer type; specifies the maximum number of messages the UE is restricted to send per uplink time unit. This refers to octet 2 to 4 of the APN rate control parameters IE as specified in 3GPP TS 24.008 sub-clause 10.5.6.3.2.</li> </ul>
Scope	Generic
Reference	Note

### 3.3.2.42. AT+CSCON

The set command controls the presentation of an unsolicited result code +CSCON. If <n>=1, +CSCON: <mode> is sent from the MT when the connection mode of the MT is changed.

For NB-IoT, only <n>=1 is supported.

The mode of the MT refers to idle when no PS signaling connection and to connected mode when a PS signaling connection between UE and network is setup.

The read command returns the status of result code presentation and an integer <mode> which shows whether the MT is currently in idle mode or connected mode.

Test command returns supported values as a compound value.

AT+CSCON	Signaling Connection Status
Test Command	AT+CSCON=?
	Response <ul style="list-style-type: none"> <li>• +CSCON: (list of &lt;n&gt;s)</li> <li>• OK</li> </ul>
Read command	AT+CSCON?
	Response <ul style="list-style-type: none"> <li>• +CSCON: &lt;n&gt;,&lt;mode&gt;[,&lt;state&gt;]</li> <li>• OK</li> <li>• If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>◦ +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>

Execution command	AT+CSCON[=<n>]
	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>◦ +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Unsolicited result code	+CSCON: <mode>[<state>[<access>]]
Parameters	<ul style="list-style-type: none"> <li>• &lt;n&gt;: integer type: 0 disable unsolicited result code 1 enable unsolicited result code +CSCON: &lt;mode&gt;</li> <li>• &lt;mode&gt;: integer type; indicates signaling connection status 0 idle 1 connected</li> </ul>
Scope	Channel specific
Reference	Note <ul style="list-style-type: none"> <li>• &lt;state&gt; and &lt;access&gt; parameters not supported for NB-IoT</li> </ul>

### 3.3.2.43. AT+CCHO

Execution of this command causes the MT to return <sessionid> to allow the TE to identify a channel that is being allocated by the currently selected UICC, which is attached to ME. The currently selected UICC will open a new logical channel; select the application identified by the <dfname> received with this command and return a session Id as the response. The ME restricts the communication between the TE and the UICC to this logical channel.

This <sessionid> is used when sending commands with Generic UICC Logical Channel access +CGLA commands.

AT+CCHO		Open UICC Logical Channel
Execution command		AT+CCHO=<dfname>
Response		<ul style="list-style-type: none"> <li>• &lt;sessionid&gt;</li> <li>• OK</li> <li>• If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>◦ +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Parameters		<ul style="list-style-type: none"> <li>• &lt;dfname&gt;: String type in hexadecimal character format. All selectable applications in the UICC are referenced by a DF name coded on 1 to 16 bytes</li> <li>• &lt;sessionid&gt;: integer type; a session Id to be used to target a specific application on the smart card (e.g. (U)SIM, WIM, ISIM) using logical channels mechanism</li> <li>• See 3GPP TS 31.101 for more information about defined values.</li> </ul>
Scope		Channel Specific
Reference		Note

### 3.3.2.44. AT+CCHC

This command asks the ME to close a communication session with the active UICC. The ME closes the previously opened logical channel. The TE will no longer be able to send commands on this logical channel. The UICC will close the logical channel when receiving this command.

<b>AT+CCHC</b>		<b>Close UICC Logical Channel</b>
Execution command		AT+CCHC=<sessionid>  Response <ul style="list-style-type: none"> <li>• CCHC</li> <li>• OK</li> <li>• If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>◦ +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Parameters		<ul style="list-style-type: none"> <li>• &lt;sessionid&gt;: integer type; the session used to target a specific application on the smart card (e.g. (U)SIM, WIM, ISIM) using logical channels mechanism</li> <li>• See 3GPP TS 31.101 for more information about defined values.</li> </ul>
Scope		Channel Specific
Reference		Note

### 3.3.2.45. AT+CGLA

Set command transmits to the MT the <command> is sent as is to the selected UICC. The UICC <response> is sent back by the MT to the TA as is.

This command allows a direct control of the currently selected UICC by a distant application on the TE. Although

+CGLA allows the TE to take control over the UICC-MT interface, there are some functions of the UICC-MT interface that logically do not need to be accessed from outside the TA/MT and, for security reasons the GSM

network authentication should not be handled outside the TA/MT. So, a Run GSM Algorithm command or an Authenticate command in GSM context shall not be allowed whether the +CGLA is locked or unlocked. However, the TE may send Authenticate commands in other security contexts (e.g. EAP security context).

<b>AT+CGLA</b>		<b>Generic UICC Logical Channel Access</b>

--	--

### 3.3.2.47. AT+CPINR

Execution command cause the UE to return the number of remaining PIN retries for the UE passwords with intermediate result code +CPINR: <code>,<retries>[,<default\_retries>] for standard PINs and +CPINRE: <ext\_code>,<retries>[,<default\_retries>] for manufacturer specific PINs. One line with one intermediate result code is returned for every <code> or <ext\_code> selected by <sel\_code>.

When execution command is issued without the optional parameter <sel\_code>, intermediate result codes are returned for all <code>s and <ext\_code>s.

In the intermediate result codes, the parameter <default\_retries> is an optional (manufacturer specific) parameter, per <code> and <ext\_code>.

Note that the M5311 modem does not support the +CPINRE indication.

AT+CPINR	Remaining PIN Retries
Execution Command	<p>AT+CPINR[=&lt;sel_code&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• [+CPINR: &lt;code&gt;,&lt;retries&gt;[,&lt;default_retries&gt;]]</li> <li>• [&lt;CR&gt;,&lt;LF&gt;:CPINR: &lt;code&gt;,&lt;retries&gt;[&lt;default_retries&gt;]]</li> <li>• [...]</li> <li>• OK</li> <li>• If error is related to wrong AT syntax:           <ul style="list-style-type: none"> <li>o +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;sel_code&gt;: String type. Same values as for the &lt;code&gt; parameter. These values are strings and shall be indicated within double quotes. Wildcard match by '*', meaning match any (sub-)string, or '?' meaning an character can be used.</li> <li>• &lt;retries&gt;: Integer type. Number of remaining retries per PIN.</li> <li>• &lt;default_retries&gt;: Integer type. Number of default/initial retries per PIN.</li> <li>• &lt;code&gt;: Type of PIN. All values listed under the description of the AT+CPIN Command, &lt;code&gt; parameter except "READY".</li> </ul>
Scope	Generic
Reference	<p>Note</p> <ul style="list-style-type: none"> <li>• M5311 modem does not support the +CPINRE indication.</li> <li>• "SIM UPIN" and "SIM UPUK" are used to display the universal PIN values if the USIM supports it.</li> </ul>

#### +CPINR examples

AT+CPINR=?	Test command
OK	
AT+CPINR?	Read command
ERROR	
AT+CPINR="SIM*"	Execute command.
	Read all SIM PIN retries

	starting with the string "SIM".

+CPINR: "SIM PIN",3,3	
+CPINR: "SIM PIN2",3,3	
OK	

### 3.3.2.48. AT+CGPIAF

Set command decides what format to print IPV6 address parameters of other AT commands. See RFC 4291 for details of the IPv6 address format.

The +CGPIAF parameters <IPv6\_AddressFormat>, <IPv6\_SubnetNotation>, <IPv6\_LeadingZeros> and

<IPv6\_CompressedZeros> affect the following commands and parameters:

- 1) in +CGTFT and +CGTFRDP, the <source address and subnet mask>;
- 2) in +CGDCONT, the <PDP\_addr>;
- 3) in +CGPADDR, the <PDP\_addr\_1> and <PDP\_addr\_2>;
- 4) in +CGCONTRDP, the <source address and subnet mask>, <DNS\_prim\_addr>, <DNS\_sec\_addr>, <P\_CSCF\_prim\_addr> and <P\_CSCF\_sec\_addr>;

Read command returns the current command parameter settings. Test command returns values supported as compound values.

AT+CGPIAF		Printing IP Address Format
Test Command	AT+CGPIAF=?	
	Response	<ul style="list-style-type: none"> <li>• +CGPIAF: (list of supported &lt;IPv6_AddressFormat&gt;s), (list of supported &lt;IPv6_SubnetNotation&gt;s), (list of supported &lt;IPv6_LeadingZeros&gt;s), (list of supported &lt;IPv6_CompressedZeros&gt;s)</li> <li>• OK</li> </ul>
Read Command	AT+CGPIAF?	
	Response	<ul style="list-style-type: none"> <li>• +CGPIAF: &lt;IPv6_AddressFormat&gt;,&lt;IPv6_SubnetNotation&gt;,&lt;IPv6_LeadingZeros&gt;,&lt;IPv6_CompressedZeros&gt;</li> </ul>

	<p>Example: “2001:DB8:0:CD30:0:0:0:0”</p> <p>1: Leading zeros are included.</p> <p>Example: “2001:0DB8:0000:CD30:0000:0000:0000:0000”</p> <p>&lt;IPv6_CompressZeros&gt;: Integer type, decides whether 1-n instances of 16 bit zero-values are replaced by only “..”. This applies only once. Setting does not apply if &lt;IPv6_AddressFormat&gt;=0.</p> <p>0: No zero compression.</p> <p>Example: “2001:DB8:0:CD30:0:0:0:0”</p> <p>1 Use zero compression.</p> <p>Example: “2001:DB8:0:CD30::”</p>
Scope	Channel Specific
Reference	<p>Note</p> <ul style="list-style-type: none"> <li>• M5311 modem does not support the +CPINRE indication.</li> <li>• “SIM UPIN” and “SIM UPUK” are used to display the universal PIN values if the USIM supports it.</li> </ul>

#### +CGPIAF examples

AT+CGPIAF=?	Test command
+CGPIAF: (0,1),(0,1),(0,1),(0,1)	
OK	
AT+CGPIAF?	Read command
+CGPIAF: 0,0,0,0	All Settings at default format
OK	
AT+CGPIAF=1,1,0,1	Set command. Use IPV6-like notation, with the “/” format for subnet mask, omit leading zeros and use zero compression.
OK	

#### 3.3.2.49. AT+CGEREP

Set command enables or disables sending of unsolicited result codes, +CGEV: XXX from UE to TE in the case of certain events occurring in the Packet Domain UE or the network. <mode> controls the processing of unsolicited result codes specified within this command. <bfr> controls the effect on buffered codes when <mode> 1 or 2 is entered.

Read command returns the current mode and buffer settings.

Test command returns the modes and buffer settings supported by the UE as compound values.

AT+CGEREP		Packet Domain Event Reporting
Test Command	AT+CGEREP=?	<p>Response</p> <ul style="list-style-type: none"> <li>• +CGEREP: (list of supported &lt;mode&gt;s), (list of supported &lt;bfr&gt;s)</li> <li>• OK</li> </ul>

0	buffer unsolicited result codes in the UE; if UE result code buffer is full, the oldest ones can be discarded. No codes are forwarded to the TE.										
1	discard unsolicited result codes when UE-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE										
2	buffer unsolicited result codes in the UE when UE-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when UE-TE link becomes available; otherwise forward them directly to the TE										
0	UE buffer of unsolicited result codes defined within this command is cleared when <mode> 1 or 2 is entered										
1	UE buffer of unsolicited result codes defined within this command is flushed to the TE when <mode> 1 or 2 is entered (OK response shall be given before flushing the codes)										
Parameters											

**+CGEV: ME PDN DEACT <cid>**  
 The mobile termination has deactivated a context. The context represents a PDN connection in NB-IOT. The <cid> for this context is provided to the TE. The format of the parameter <cid> is found in command +CGDCONT.

NOTE 3: Occurrence of this event replaces usage of the event

**+CGEV: ME DEACT <PDP\_type>, <PDP\_addr>, [<cid>]**

For other PDP context handling, the following unsolicited result codes and the corresponding events are defined:

**+CGEV: REJECT <PDP\_type>, <PDP\_addr>**

A network request for context activation occurred when the UE was unable to report it to the TE with a +CRING unsolicited result code and was automatically rejected. The format of the parameters <PDP\_type> and <PDP\_addr> are found in command +CGDCONT.

NOTE 6: This event is not applicable for EPS.

**+CGEV: NW REACT <PDP\_type>, <PDP\_addr>, [<cid>]**

The network has requested a context reactivation. The <cid> that was used to reactivate the context is provided if known to the UE. The format of the parameters <PDP\_type>, <PDP\_addr> and <cid> are found in command +CGDCONT.

NOTE 7: This event is not applicable for EPS.

**Parameter:**

<PDP_type>	Packet Data Protocol type (see +CGDCONT command)
<PDP_addr>	Packet Data Protocol address (see +CGDCONT command)
<cid>	Context Id (see +CGDCONT command) Note: <cid> only given if known to the UE.
<class>	GPRS mobile class (see +CGCLASS command)
<event_type>	Integer type parameter indicates whether this is an informational Event of whether the TE has acknowledged it. 0 Informational event 1 Information request: Acknowledgement required. The Acknowledgement can be accept or reject, see AT+CGANS.
<change_reason>	Integer type parameter indicates what kind of change occurred. 1 TFT only changed 2 QoS only changed 3 Both TFT and QoS changed
<reason>	Integer type parameter indicates the reason why the context activation request for PDP type IPV4V6 was not granted. This parameter is only included if the requested PDP type associated with <cid> is IPV4V6, and the PDP type assigned by the network for <cid> is either IPV4 or IPV6 0 IPV4 only allowed 1 IPV6 only allowed 2 single address bearers only allowed 3 single address bearers only allowed and MT initiated context activation for a second address type bearer was not successful
<cid_other>	Indicated the context identifier allocated by MT for an MT initiated context of a second address type. MT shall only include this parameter if <reason> parameter indicates single address bearers only allowed, and MT supports MT initiated context activation of a second address type without additional commands from the TE, and MT has activated the PDN connection or PDP context associated with <cid_other>.

Scope	Channel Specific
Reference	Note <ul style="list-style-type: none"> <li>• Parameter &lt;mode&gt; option 2 is not supported.</li> <li>• Parameter &lt;cid_other&gt; is not supported by NB-IOT modem software.</li> </ul>

### 3.3.2.50. AT+CGDEL

The execution command +CGDEL=<cid> removes the indicated PDP context and removes all associated data related to the indicated PDP contexts that are not activated. The AT command will not delete or remove information for activated PDP contexts. The removed PDP context is listed by the +CGDEL: <cid> intermediate result code.

- If <cid> points to a primary PDP context, the PDP context will be deleted together with all linked secondary PDP contexts if none of the PDP contexts are activated.
- If <cid> points to a secondary PDP context, the PDP context will be deleted if it is not activated.

A special form of the command can be given as +CGDEL (with the <cid> omitted). In this form, all primary PDP contexts that are not activated or have any activated secondary PDP contexts will be removed and all secondary PDP contexts that are not activated will be removed. The associated data of all the deleted PDP contexts will be removed, and the removed PDP context are listed by the +CGDEL: <cid>[,<cid>[,...]] intermediate result code. Activated PDP contexts will not cause this form of the command to return ERROR or +CME\_ERROR.

Note, +CGDEL will remove associated PDP context data that can be set by the AT commands +CGDCONT, +CGDSCONT, +CGTFT, +CGEQREQ, +CGEQMIN and +CGEQOS.

For an attempt to delete PDP context(s) which would violate these rules, a +CME\_ERROR response is returned. Refer sub-clause 9.2 for possible <err> values.

AT+CGDEL		Delete Non-Active PDP Contexts
		AT+CGDEL=<cid>
Execution Command		Response <ul style="list-style-type: none"> <li>• +CGDEL: &lt;cid&gt;[,&lt;cid&gt;[,...]]</li> <li>• OK</li> <li>• If error is related to wrong AT syntax:               <ul style="list-style-type: none"> <li>◦ +CME_ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Parameters	<cid>:	a numeric parameter which specifies a particular PDP context Definition.
Scope		Generic
Reference		Note

### 3.3.2.51. AT+CGAUTH

Set command allows the user to specify authentication parameters for a PDP context identified by the (local) context identification parameter <cid> used during the PDP context activation and the PDP context modification procedures. Since the <cid> is the same parameter that is used in the +CGDCONT and +CGDSCONT commands, +CGAUTH is effectively as an extension to these commands.

Note, this AT command transfers information in the clear that can be regarded as sensitive in security terms. Care must be exercised in providing this command where the AT commands are used in insecure scenarios. The read command returns the current settings for each defined context.

The test command returns values supported as a compound value.

<b>AT+CGAUTH</b> Define PDP Context Authentication Parameters	
Test Command	<p>AT+CGAUTH=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CGAUTH: (range of supported &lt;cid&gt;s),(list of supported &lt;auth_prot&gt;s),(range of supported &lt;userid&gt;s),(range of supported &lt;password&gt;s)</li> <li>• OK</li> </ul>
Read Command	<p>AT+CGAUTH?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• [+CGAUTH: &lt;cid&gt;,&lt;auth_prot&gt;,&lt;userid&gt;,&lt;password&gt;]</li> <li>• [&lt;CR&gt;&lt;LF&gt;+CGAUTH: &lt;cid&gt;,&lt;auth_prot&gt;,&lt;userid&gt;,&lt;password&gt;]</li> <li>• [...]</li> <li>• OK</li> </ul>
Execution Command	<p>AT+CGAUTH=&lt;cid&gt;[,&lt;auth_prot&gt;[,&lt;userid&gt;[,&lt;password&gt;]]]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• When &lt;auth_prot&gt;/&lt;username&gt;/&lt;password&gt; set:           <ul style="list-style-type: none"> <li>◦ OK</li> </ul> </li> <li>• When no &lt;auth_prot&gt;/&lt;username&gt;/&lt;password&gt; set displays current auth_prot username and password for &lt;cid&gt;:           <ul style="list-style-type: none"> <li>◦ +CGAUTH:&lt;cid&gt;,&lt;auth_prot&gt;,&lt;username&gt;,&lt;password&gt;</li> <li>◦ OK</li> </ul> </li> <li>• OK</li> <li>• If error is related to wrong AT syntax:           <ul style="list-style-type: none"> <li>◦ +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Parameters	<p>&lt;cid&gt;: A numeric parameter which specifies a particular PDP context definition (see the +CGDCONT and +CGDSCONT commands).</p> <p>&lt;auth_prot&gt;: Numeric parameter. Authentication protocol used for this PDP context.</p> <ul style="list-style-type: none"> <li>0: None. Used to indicate that no authentication protocol is used for this PDP context. Username and password are removed if previously specified.</li> <li>1: PAP</li> </ul> <p>&lt;userid&gt;: String type. User name for access to the IP network.</p> <p>&lt;password&gt;: String type. Password for access to the IP network.</p>
Scope	Generic
Reference	<p>Note</p> <ul style="list-style-type: none"> <li>• M5311 only supports &lt;auth_prot&gt; = PAP</li> </ul>

### 3.4. AT Commands According to 3GPP TS 27.005 for SMS

#### 3.4.1. Overview

The 3GPP TS 27.005 commands are for performing SMS and CBS related operations for both Text and PDU modes.

Command	Description
<b>AT+CMGD</b>	Delete SMS Message
<b>AT+CMGF</b>	Select SMS Message Format
<b>AT+CMGL</b>	List SMS Messages From Preferred Store
<b>AT+CMGR</b>	Read SMS Message
<b>AT+CMGS</b>	Send SMS Message
<b>AT+CMGW</b>	Write SMS Message To Memory
<b>AT+CMSS</b>	Send SMS Message From Storage
<b>AT+CMGC</b>	Send SMS Command
<b>AT+CNMI</b>	New SMS Message Indications
<b>AT+CPMS</b>	Preferred SMS Message Storage
<b>AT+CRES</b>	Restore SMS Settings
<b>AT+CSAS</b>	Save SMS Settings
<b>AT+CSCA</b>	SMS Service Centre Address
<b>AT+CSDH</b>	Show SMS Text Mode Parameters
<b>AT+CSMP</b>	Set SMS Text Mode Parameters
<b>AT+CSMS</b>	Select Message Service
<b>AT+CNMA</b>	New SMS Message Acknowledgment
<b>AT+CMMS</b>	More SMS Messages to Send
<b>AT+CMS ERROR</b>	Message Service Failure Result Code

#### 3.4.2. Concatenated SMSs

M5311 always treats SMSs in PDU mode as separate SMS messages even if they are part of a concatenated SMS.

By default, M5311 will not support concatenated SMS for text mode. They will be handled by the MMI or PC. However, if **AT\*MFTRCFG=2,3,1** is set (and M5311 rebooted for this to take effect) then M5311 will handle concatenated SMSs in text mode. In this case, M5311 will check if incoming SMSs are part of a concatenated SMS and manage message read, write, send and deletion differently.

Specifically, when reading concatenated SMSs, the number of unread messages is equal to the number of unread SMSs with all message segments of a concatenated SMS treated as one message. A concatenated SMS message is marked as unread if any of its segments are unread.

Also this will allow the user to enter an SMS longer than a single SMS (80, 140, or 160 characters depending on the data coding scheme (dcs)) and manage sending of it as a number of SMSs being part of a single concatenated SMS. The maximum length SMS that can be sent or received in concatenated mode is 1024 characters.

The behavior of the SMS related AT commands: CMGS, CMGW, CMGR, CMGL, CMGD, CMSS, and CMMS changes depending on if concatenated SMS handling is enabled or disabled within the M5311 modem software. This is detailed in the descriptions of the AT commands.

##### 3.4.2.1. Concatenated SMSs and AT+CSMP

When M5311 is operating in default mode (i.e. no support for concatenated SMSs in text mode), then in order that

the user can read, write and send SMSs that are part of a concatenated SMS, the user must either:

Use PDU mode, where the raw SMS is used including the header information that contains the concatenated SMS information.

In text mode, the <fo> field of AT commands AT+CSMP must be set to indicated TP-User-Data-Header-Indication set.

For option (b), the 3GPP specification 23.038 indicates that when TP-User-Data-Header-Indication is set, then, in text mode, the text is read, written and sent in HEX mode.

Some examples of how to read/write concatenated SMSs in text and PDU mode are shown in the following subsection.

### 1) Examples of Concatenated SMSs in Text and PDU Mode

#### a) Example of writing a concatenated SMS segment in to the SIM in text mode:

```
AT+CNMI=2,1,0,2,0
OK
AT+CSMP=81,167,0, 0
OK
AT+CMGF=1
OK
AT+CMGW="0631375429"
050003AA02012A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
OK
```

In this case for the concatenated SMS:

- 050003AA0201 is the concatenated SMS header
  - 2A is '\*' character, so the SMS is full of the character 2A
- b) Example of reading a concatenated SMS segment from the SIM in text mode:

```
AT+CMGR=5
+CMGR: "STO UNSENT", "0631375429",,
050003AA02012A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2A2
OK
```

This is reading the same SMS as was written in the last example. The concatenated SMS header can be seen at the start of the SMS.

#### 2) Example of reading a concatenated SMS segment from the SIM in PDU mode:

```
AT+CMGF=0
OK
AT+CMGR=5
+CMGR: 2,,15307913386094000F051000A8160137345920000A7A0050003AA0201552A
954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A
954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A
954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A
954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A954AA552A9542A
OK
```

In this example:

- 07913386094000F051000A8160137345920000A7A0 is the SMS header
- 050003AA0201 still is the SMS concatenated header

all the remaining characters are the '\*' character (7-bits default alphabet) encoded into 8-bits bytes.

### 3.4.3. Detailed Descriptions of Commands

#### 3.4.3.1. AT+CMGD

AT+CMGD		Delete SMS message
Test command		<p>AT+CMGD=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CMGD: list of supported &lt;index&gt;s</li> <li>• OK</li> </ul>
Execute command		<p>AT+CMGD=&lt;index&gt;[,&lt;DelFlag&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• TA deletes one or several messages from preferred message storage &lt;mem1&gt; location &lt;index&gt; or message groups indicated by &lt;DelFlag&gt;.</li> <li>• OK</li> <li>• If error is related to ME functionality:           <ul style="list-style-type: none"> <li>◦ +CMS ERROR &lt;err&gt;</li> </ul> </li> </ul>
Parameters		<ul style="list-style-type: none"> <li>• &lt;index&gt; integer type; value in the range of location numbers supported by the associated memory. This value is only used if &lt;DelFlag&gt; = 0</li> <li>• &lt;DelFlag&gt; message delete mode           <ul style="list-style-type: none"> <li>0 Delete message at location &lt;index&gt; (Default value)</li> <li>1 Delete all read messages</li> <li>2 Delete all READ and SENT messages</li> <li>3 Delete all READ, SENT and UNSENT messages</li> <li>4 Delete all messages</li> </ul> </li> </ul>
Scope		<ul style="list-style-type: none"> <li>◦ Channel Specific for test command</li> <li>◦ Generic for execute command</li> </ul>
Reference 3GPP TS 27.005		<p>Note</p> <ul style="list-style-type: none"> <li>• When the M5311 software has concatenated SMS handling in modem enabled (see AT command AT*MFTRCFG) the user can delete a concatenated text SMS up to 1024 characters in length. A concatenated SMS is stored on the SIM as number of smaller SMSs. (This is not possible when MMI is present).</li> <li>• When the M5311 software does not have concatenated SMS handling in the modem enabled, the maximum text SMS length is restricted depending on the data coding scheme (160 for 7-bit, 140 for 8-bit, 80 for 16-bit).</li> <li>• An attempt to delete anything other than the first segment of a concatenated SMS, when concat SMS is enabled, will result in ERROR response.</li> <li>• Deleting an empty entry will result in OK response rather than ERROR.</li> </ul>

### 3.4.3.2. AT+CMGF

AT+CMGF		Select SMS Message Format
Test command	AT+CMGF=?	
	Response	<ul style="list-style-type: none"> <li>• +CMGF: list of supported &lt;mode&gt;s</li> <li>• OK</li> </ul>
Read command	AT+CMGF?	
	Response	<ul style="list-style-type: none"> <li>• +CMGF: &lt;mode&gt;</li> <li>• OK</li> </ul>
Set command	AT+CMGF=[<mode>]	
	Response	<ul style="list-style-type: none"> <li>• TA sets parameter to denote which input and output format of messages to use.</li> <li>• OK</li> </ul>
Parameters	<mode>	
	0 PDU mode	
	1 text mode	
Scope	Channel Specific	
Reference 3GPP TS 27.005	Note	

### 3.4.3.3. AT+CMGL

AT+CMGL		List SMS messages from preferred store
Test command	AT+CMGL=?	
	Response	<ul style="list-style-type: none"> <li>• +CMGL: list of supported &lt;stat&gt;s</li> <li>• OK</li> </ul>
Execute command	AT+CMGL[=<stat>]	
	Response	<p>TA returns messages with status value &lt;stat&gt; from message storage &lt;mem1&gt; to the TE. . If status of the message is 'received unread', status in the storage changes to 'received read'.</p> <ul style="list-style-type: none"> <li>• If text mode (+CMGF=1) and command successful: for SMS-SUBMITS and/or SMS-DELIVERS:           <ul style="list-style-type: none"> <li>○ +CMGL: &lt;index&gt;,&lt;stat&gt;,&lt;oa/da&gt;,[&lt;alpha&gt;],[&lt;scts&gt;][,&lt;tooa/toda&gt;,&lt;leng th&gt;]&lt;CR&gt;&lt;LF&gt;&lt;data&gt;[&lt;CR&gt;&lt;LF&gt;</li> <li>○ +CMGL: &lt;index&gt;,&lt;stat&gt;,&lt;da/oa&gt;,[&lt;alpha&gt;],[&lt;scts&gt;][,&lt;tooa/toda&gt;,&lt;leng th&gt;]&lt;CR&gt;&lt;LF&gt;&lt;data&gt;[...] OK</li> </ul> </li> <li>• If SMS-STATUS-REPORT and text mode:           <ul style="list-style-type: none"> <li>○ +CMGL: &lt;index&gt;,&lt;stat&gt;,&lt;fo&gt;,&lt;mr&gt;,[&lt;ra&gt;],[&lt;tora&gt;],&lt;scts&gt;,&lt;dt&gt;,&lt;st&gt; ○ [&lt;CR&gt;&lt;LF&gt;]</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>○ +CMGL:   &lt;index&gt;,&lt;stat&gt;,&lt;fo&gt;,&lt;mr&gt;,[&lt;ra&gt;],[&lt;tora&gt;],&lt;scts&gt;,&lt;dt&gt;,&lt;st&gt;   [...]   OK</li> <li>• If PDU mode (+CMGF=0) and command successful:           <ul style="list-style-type: none"> <li>○ +CMGL: &lt;index&gt;,&lt;stat&gt;,[&lt;alpha&gt;],&lt;length&gt;&lt;CR&gt;&lt;LF&gt;&lt;pdu&gt;</li> <li>○ [&lt;CR&gt;&lt;LF&gt;+CMGL: &lt;index&gt;,&lt;stat&gt;,[&lt;alpha&gt;],&lt;length&gt;&lt;CR&gt;&lt;LF&gt;&lt;pdu&gt;</li> <li>○ [...]</li> <li>○ OK</li> </ul> </li> <li>• If error is related to ME functionality:           <ul style="list-style-type: none"> <li>○ +CMS ERROR:&lt;err&gt;</li> </ul> </li> </ul> <p>Parameters</p> <ul style="list-style-type: none"> <li>• &lt;alpha&gt; string type alphanumeric representation of &lt;da&gt; or &lt;oa&gt; corresponding to the entry found in MT phonebook; implementation of this feature is manufacturer specific</li> <li>• &lt;da&gt; 3GPP 23.040 TP-Destination-Address Address-Value field in string format; BCD numbers (or GSM default alphabet characters) are converted to characters; type of address given by &lt;toda&gt;</li> <li>• &lt;data&gt; In the case of SMS: 3GPP 23.040 TP-User-Data in text mode responses; format:           <ul style="list-style-type: none"> <li>○ if &lt;dcs&gt; indicates that 3GPP 23.038 default alphabet is used and &lt;fo&gt; indicates that 3GPP 23.040 TP-User-Data-Header-Indication is not set: ME/TA converts GSM alphabet into current TE character set according to rules of Annex A</li> <li>○ if &lt;dcs&gt; indicates that 8-bit or UCS2 data coding scheme is used, or &lt;fo&gt; indicates that 3GPP 23.040 TP-User-Data-Header-Indication is set: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65))</li> </ul> </li> </ul> <p>In the case of CBS: 3GPP 23.041 CBM Content of Message in text mode responses; format:</p> <ul style="list-style-type: none"> <li>○ if &lt;dcs&gt; indicates that 3GPP 23.038 default alphabet is used: ME/TA converts GSM alphabet into current TE character set according to rules of Annex A</li> <li>○ if &lt;dcs&gt; indicates that 8-bit or UCS2 data coding scheme is used: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number</li> </ul> <ul style="list-style-type: none"> <li>• &lt;length&gt; integer type value indicating in the text mode (+CMGF=1) the length of the message body &lt;data&gt; (or &lt;cdata&gt;) in characters; or in PDU mode (+CMGF=0), the length of the actual TP data unit in octets (i.e. the RP layer SMSC address octets are not counted in the length)</li> <li>• &lt;index&gt; integer type; value in the range of location numbers supported by the associated memory</li> <li>• &lt;oa&gt; 3GPP 23.040 TP-Originating-Address Address-Value field in string format; BCD numbers (or GSM default alphabet characters) are converted to characters; type of address given by &lt;tooa&gt;</li> <li>• &lt;pdu&gt; In the case of SMS: 3GPP 24.011 SC address followed by 3GPP 23.040 TPDU in hexadecimal format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65)). Reference 3GPP TS 27.005	<p>Note</p> <p>The command writes the settings &lt;vp&gt;, &lt;pid&gt; and &lt;dcs&gt; in SIM memory. &lt;fo&gt; field is not stored anywhere.</p>

	<ul style="list-style-type: none"> <li>On startup, the settings &lt;vp&gt;, &lt;pid&gt; and &lt;dcs&gt; are read from the SIM and used for SMS AT commands. If they cannot be found in the SIM they are set to the default values.</li> <li>The &lt;fo&gt; field is always set to the default value at startup.</li> </ul>
--	--

### 3.4.3.16. AT+CSMS

<b>AT+CSMS</b>		<b>Select Message Service</b>
Test command		<p>AT+CSMS=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>+CSMS: list of supported &lt;service&gt;s</li> <li>OK</li> </ul>
Read command		<p>AT+CSMS?</p> <p>Response</p> <ul style="list-style-type: none"> <li>+CSMS: &lt;service&gt;,&lt;mt&gt;,&lt;mo&gt;,&lt;bm&gt;</li> <li>OK</li> </ul>
Set command		<p>AT+CSMS=&lt;service&gt;</p> <p>Response</p> <ul style="list-style-type: none"> <li>+CSMS: &lt;mt&gt;,&lt;mo&gt;,&lt;bm&gt; OK</li> </ul> <p>If error is related to ME functionality:</p> <ul style="list-style-type: none"> <li>+CMS ERROR:&lt;err&gt;</li> </ul>
Parameters		<ul style="list-style-type: none"> <li>&lt;service&gt;           <ul style="list-style-type: none"> <li>0 3GPP 23.040 and 23.041.</li> <li>1 3GPP 23.040 and 23.041, with a requirement that a message routed directly to TE should be acknowledged via +CNMA.</li> <li>128 SMS PDU mode - TPDU only used for sending/receiving SMSs.</li> </ul> </li> <li>&lt;mt&gt; Mobile Terminated Messages:           <ul style="list-style-type: none"> <li>0 Type not supported</li> <li>1 Type supported</li> </ul> </li> <li>&lt;mo&gt; Mobile Originated Messages:           <ul style="list-style-type: none"> <li>0 Type not supported</li> <li>1 Type supported</li> </ul> </li> <li>&lt;bm&gt; Broadcast Type Messages:           <ul style="list-style-type: none"> <li>0 Type not supported</li> </ul> </li> </ul>
Scope		<ul style="list-style-type: none"> <li>Channel Specific for test and read command</li> <li>Generic for set command</li> </ul>
Reference 3GPP TS 27.005		<p>Note</p> <ul style="list-style-type: none"> <li>&lt;bm&gt; message type is not supported</li> </ul>

### 3.4.3.17. AT+CNMA

This command is only valid when AT+CSMS? <service> returns 1.

<b>AT+CNMA</b>		<b>New Message Acknowledgement to ME/TA</b>
Test command		<p>AT+CNMA=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>If PDU mode (+CMGF=0):</li> </ul>

	<ul style="list-style-type: none"> <li>○ +CNMA: list of supported &lt;n&gt;s</li> </ul>
	AT+CNMA [=<n>[,<length[<CR> PDU is entered <CTRL-Z/ESC]]]
Set command	<p><b>Response</b></p> <p>After SMS is routed to the TA (based on message class and +CNMI settings as defined in 27.005), TA sends acknowledgement command to the network. Note: this functionality shall be used only when +CSMS parameter &lt;service&gt; equals 1.</p> <ul style="list-style-type: none"> <li>• If command is executed but no acknowledgement is expected, or some other error ME related error occurs:           <ul style="list-style-type: none"> <li>○ +CMS ERROR:&lt;err&gt;</li> </ul> </li> <li>• If PDU mode (+CMGF=0):           <ul style="list-style-type: none"> <li>&lt;n&gt; 0 Operates similarly as defined for text mode (if ME doesn't get acknowledgement within required time, ME should respond as specified in 3GPP 24.011, and ME shall automatically disable routing to TE setting both &lt;mt&gt; and &lt;ds&gt;values of CNMI to zero).</li> <li>1 Send positive acknowledgement to the network with optional PDU message</li> <li>2 Send negative acknowledgement to the network with optional PDU message</li> </ul> </li> </ul>
Parameters	<length> Length of the optional PDU message. Integer type
Scope	Generic
Reference 3GPP TS 27.005	Note

### 3.4.3.18. AT+CMMS

AT+CMMS		More Messages to Send
Test command		AT+CMMS=? <p><b>Response</b></p> <ul style="list-style-type: none"> <li>• +CMMS: list of supported &lt;n&gt;s</li> </ul>
Read command		AT+CMMS? <p><b>Response</b></p> <ul style="list-style-type: none"> <li>• +CMMS: &lt;n&gt;</li> </ul>
Set command		AT+CMMS= [<n>] <p><b>Response</b></p> <p>TA sets continuity of SMS relay protocol link. When feature is enabled multiple messages can be sent much faster as link is kept open:</p> <ul style="list-style-type: none"> <li>• If error is related to ME functionality:</li> <li>• +CMS ERROR &lt;err&gt;</li> </ul>
Parameters		<n> <ul style="list-style-type: none"> <li>0 Disable</li> <li>1 Keep enabled until the time between the response of the latest message send command (+CMGS, +CMSS, etc.) and the next send command exceeds 1-5 seconds (the exact value is up to ME implementation), then ME shall close the link and TA switches &lt;n&gt; automatically back to 0</li> <li>2 Enable (if the time between the response of the latest message send command and the next send command exceeds 1-5 seconds (the exact</li> </ul>

	value is up to ME implementation), ME shall close the link but TA shall not switch automatically back to <n>=0)
Scope	<ul style="list-style-type: none"><li>○ Channel Specific for test and read command</li><li>○ Generic for set command</li></ul>
Reference 3GPP TS 27.005	<p>Note</p> <ul style="list-style-type: none"><li>• When the M5311 software has concatenated SMS handling in modem enabled (see AT command AT*MFTRCFG) the software automatically sends all segments of a concatenated message one after the other. (This is not possible when the MMI is present).</li></ul>

### 3.5. AT Commands Special for CMIOT

#### 3.5.1. Overview

Command	Description
<b>AT+HVER</b>	Request Hardware Version
<b>AT+SWVER</b>	Request Hardware Version
<b>AT+CPOF</b>	Shut down the system
<b>AT+CMRB</b>	Software reboots the terminal
<b>AT+COLDRB</b>	Cold reboots the terminal
<b>AT+GPIO</b>	Operate GPIO
<b>AT+SM</b>	Set sleep mode
<b>AT+EPORT</b>	Control and query serial port
<b>AT+CMADC</b>	Read ADC
<b>AT+CMSYSCTRL</b>	Enable output of sleep/net status
<b>AT+TAUAC</b>	Read periodic TAU value
<b>AT+ICCID</b>	Read USIM ICCID file
<b>AT+CLPLMN</b>	Clear PLMN, EARFCN, PCI attachment record
<b>AT*ENGINFO</b>	Network/cell/UE engineering information reporting.
<b>AT*FRCLLCK</b>	Lock cell & freq: MD only camps on specified frequency and cell ID (if specified)
<b>AT*SPCHSC</b>	Set scrambling algorithm of NPDSCH
<b>AT*CGDEFCONT</b>	Set default PSD connection settings (for attach PDN connection)
<b>AT*PLMNURI</b>	PLMN uplink rate indication.
<b>AT*NBIOTDT</b>	NB-IOT data type per APN (normal/exceptional)
<b>AT*NBIOTRAI</b>	NB-IOT release assistance indication
<b>AT*HOMENW</b>	Display Home Network Information
<b>AT*CMSPN</b>	Get Service Provider name from SIM
<b>AT*CMUNSOL</b>	Extra Unsolicited Indications
<b>AT*CMBAND</b>	Query current operating band
<b>AT*MATWAKEUP</b>	Configure URC on specific AT channel when module woken up from deep sleep
<b>AT*SLEEP</b>	Configure URC on specific AT channel when module enter deep sleep
<b>AT*WAKETIME</b>	Config wake-up time after WAKEUP_IN triggering
<b>AT*ENTERSLEEP</b>	Enter light/deep sleep mode immediately
<b>AT*MDPDNP</b>	Set default PDN Parameter
<b>AT*EDRXCFG</b>	eDRX configuration
<b>AT^SYSCONFIG</b>	Configure system Reference
<b>AT^CARDMODE</b>	Request SIM/USIM Mode
<b>AT^SPN</b>	Read Service Provider Name

#### 3.5.2. Detailed Description of Commands

##### 3.5.2.1. AT+HVER

The command returns the hardware version of the UE. The format is not specified.

<b>AT+HVER</b>		<b>Request Hardware Version</b>
Execution command		AT+HVER
		Response
		<ul style="list-style-type: none"> <li>• +HVER:&lt;Hardware_Version&gt;</li> <li>• OK</li> </ul>
Parameters	<Hardware_Version> :	Hardware version, string type up to 31 bytes.
Scope	Channel Specific	
Reference	Note	

#### +HVER Examples

```
AT+HVER
+HVER: LV-V005
OK
```

#### 3.5.2.2. AT+SWVER

The command returns the software version of the UE. The format is not specified.

<b>AT+SWVER</b>		<b>Request Software Version</b>
Execution command		AT+SWVER
		Response
		<ul style="list-style-type: none"> <li>• &lt;Software_Version&gt;</li> <li>• OK</li> </ul>
Parameters	< Software_Version > :	Software version, string type up to 31 bytes.
Scope	Channel Specific	
Reference	Note	

#### +SWVER Examples

```
AT+SWVER
M5311-MLVH0S00
OK
```

#### 3.5.2.3. AT+CPOF

Shut down the system.

<b>AT+CPOF</b>		<b>Power Off</b>
Test Command		AT+CPOF=?
		Response
		<ul style="list-style-type: none"> <li>• +CPOF:</li> <li>• OK</li> </ul>
Execution command	AT+CPOF	

	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR if operation failed. Otherwise system will Power off.</li> </ul>
Unsolicited result code	• POWER OFF
Scope	Channel Specific
Reference	Note

**+CPOF Examples**

```

AT+CPOF=?
+CPOF:
OK

AT+CPOF
OK
POWER OFF
    Shut down the system
  
```

**3.5.2.4. AT+CMRB**

Software reboots the terminal.

AT+CMRB		Reboots the terminal
Test Command		AT+CMRB=? Response <ul style="list-style-type: none"> <li>• +CMRB:</li> <li>• OK</li> </ul>
Execution command		AT+CMRB Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR if operation failed. Otherwise system will reboot.</li> </ul>
Unsolicited result code		• REBOOTING..
Scope		Channel Specific
Reference		Note

**+CMRB Examples**

```

AT+CMRB=?
+CMRB:
OK

AT+CMRB
trigger terminal reset.The system will
reboot immediately.

OK
REBOOTING..

*ATREADY: 1
+CFUN: 1
+CPIN: READY
    reboot successful.
  
```

### 3.5.2.5. AT+COLDRE

Cold reboots the terminal. Hardware peripherals will be powered off and reset.

<b>AT+COLDRE</b>		<b>Reboots the terminal</b>
Test Command	AT+COLDRE=?	
	Response	<ul style="list-style-type: none"> <li>• +COLDRE:</li> <li>• OK</li> </ul>
Execution command	AT+COLDRE	
	Response	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR if operation failed. Otherwise system will reboot.</li> </ul>
Unsolicited result code	• COLD REBOOTING..	
Scope	Channel Specific	
Reference	Note	

#### +COLDRE Examples

```
AT+COLDRE=?
```

```
+COLDRE:
```

```
OK
```

```
AT+COLDRE
```

trigger terminal reset. The system will reboot immediately.

```
OK
```

```
COLD REBOOTING..
```

```
*ATREADY: 1
```

```
+CFUN: 1
```

```
+CPIN: READY
```

reboot successful.

### 3.5.2.6. AT+GPIO

Query GPIO configuration and Change GPIO configuration. This AT command is case sensitive.

<b>AT+GPIO</b>		<b>Operate GPIO</b>
Test Command	AT+GPIO=?	
	Response	<ul style="list-style-type: none"> <li>• +GPIO: (1-7),(9,10),()</li> <li>• OK</li> <li>• ERROR</li> </ul>

Set command	AT+GPIO=<op>,<gpio_pin>,[[md_val][s_dir][di_val][od_val][pull_value][s_pull_type]<drv_val>]]
	Response <ul style="list-style-type: none"> <li>• ATCI_CMD_MODE_EXECUTION OK</li> <li>• OK</li> </ul>
Unsolicited result code	See Table Below
Parameters	<ul style="list-style-type: none"> <li>• &lt;op&gt;: integer             <ul style="list-style-type: none"> <li>1 query the GPIO configuration, return +GPIO:&lt;gpio_pin&gt;,&lt;md_value&gt;,&lt;s_dir&gt;,&lt;di_val&gt;,&lt;od_val&gt;,&lt;s_current_stt&gt;,&lt;pull_value&gt;</li> <li>2 set mode to one pin.</li> <li>3 set direction to one pin</li> <li>4 set pull up/down to one pin</li> <li>5 set pull resistance to one pin</li> <li>6 set output data to one pin</li> <li>7 set current driving to one pin</li> </ul> </li> <li>• &lt;gpio_pin&gt;: integer, gpio pin number, only Pin34 and Pin35 supported             <ul style="list-style-type: none"> <li>34 Pin 34, GPIO0</li> <li>35 Pin 35, GPIO1</li> </ul> </li> <li>• &lt;md_val&gt;: integer, GPIO mode value             <ul style="list-style-type: none"> <li>0 gpio(just support gpio mode)</li> </ul> </li> <li>• &lt;s_dir&gt;: integer, direction value             <ul style="list-style-type: none"> <li>0 input</li> <li>1 output</li> </ul> </li> <li>• &lt;di_val&gt;: integer input direction value;             <ul style="list-style-type: none"> <li>0 low</li> <li>1 high</li> </ul> </li> <li>• &lt;od_val&gt;: integer, output direction value;             <ul style="list-style-type: none"> <li>0 low</li> <li>1 high</li> </ul> </li> <li>• &lt;pull_value&gt;: integer, pull value; 0 means pull-up, 1 means pull-down.             <ul style="list-style-type: none"> <li>0 pull-up</li> <li>1 pull-down</li> <li>2 disable pull</li> </ul> </li> <li>• &lt;s_pull_type&gt;: integer             <ul style="list-style-type: none"> <li>0 no pull (high impedance)</li> <li>1 75K pull-up(not support)</li> <li>2 75K pull-down(not support)</li> <li>3 47K pull-up</li> <li>4 47K pull-down</li> <li>5 23.5K pull-up</li> <li>6 23.5K pull-down</li> </ul> </li> <li>• &lt;drv_val&gt;: integer, the current driving.             <ul style="list-style-type: none"> <li>0 4ma</li> <li>1 8ma</li> <li>2 12ma</li> <li>3 16ma</li> </ul> </li> </ul>

Scope	Channel Specific
Reference	Note

Command	Possible URC(s)
+GPIO=1,<gpio_pin>	+GPIO:<gpio_pin>,<md_val>,<s_dir>,<di_val>,<od_val>,<drv_val>,<s_pull_type>
+GPIO=2,<gpio_pin>,<mod_val>	<gpio_pin>,<md_val>
+GPIO=3,<gpio_pin>,<di_val>	<gpio_pin>,<s_dir>
+GPIO=4,<gpio_pin>,<pull_val>	<gpio_pin>,<s_pull_type>
+GPIO=5,<gpio_pin>,<s_pull_type>	<gpio_pin>,<s_pull_type>
+GPIO=6,<gpio_pin>,<od_val>	<gpio_pin>,<od_val>
+GPIO=7,<gpio_pin>,<drv_val>	<gpio_pin>,<drv_val>

### +GPIO Examples

```
at+gpio=1,34          //get GPIO_9 status
+GPIO: 34,0,1,1,1,0,0 //GPIO 9 in input mode, input value is low
```

OK

```
AT+GPIO=3,34,1        //set GPIO_9 to output direction
34,1
OK
```

```
AT+GPIO=6,34,0        //set output low voltage
34,0
OK
```

```
AT+GPIO=7,34,3        set GPIO_9 current to 16mA
34,3
OK
```

```
AT+GPIO=4,34,1        //set GPIO_9 to pull-down state
OK
```

```
AT+GPIO=3,34,0        //set GPIO_9 to input direction
34,0
OK
```

```
AT+GPIO=4,34,1        //set GPIO_9 to pull-down state
34,4
OK
```

```
at+gpio=5,34,0        //set GPIO_9 to high impedance
34,0
```

OK

### 3.5.2.7. AT+SM

Set the sleep mode.

<b>AT+SM</b>		<b>Set the sleep mode</b>
Set command	AT+SM=<op>	
	Response	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;op&gt;: string</li> </ul>	
	LOCK	acquire a temporary lock to prevent system enter sleep.
	UNLOCK	release the temporary lock acquired by AT+SM=LOCK command.
	LOCK_FOREVER	acquire a lock to prevent system enter sleep. This lock will be written into NVDM, so it will still valid even after reboot.
	UNLOCK_FOREVER	release lock acquired by AT+SM=LOCK_FOREVER command, and clear the NVDM data.
		show lock status. All these setting will be written into NVDM, will still take effect after reboot
Scope	Channel Specific	
Reference	Note	

### +SM Examples

```

AT+SM=LOCK          //acquire a lock to prevent system enter sleep.
OK

AT+SM=UNLOCK        //release lock acquired by AT+SM=LOCK.
OK

AT+SM=LOCK_FOREVER //acquire a lock to prevent system enter sleep, this
                    lock will stay valid even after reboot.
OK
AT+SM=UNLOCK_FOREVER //release a lock acquired by AT+SM=LOCK_FOREVER
                      command.
OK
    
```

### 3.5.2.8. AT+EPORT

These AT commands are used to show or modify serial port assignment for the application, show or modify parameters of serial port devices, and switch serial port for the application, the setting will work after module reboot.

<b>AT+EPORT</b>		<b>Control and query serial port</b>
Test Command	AT+EPORT=?	
	Response	<ul style="list-style-type: none"> <li>• usage</li> <li>• OK</li> </ul>
Set command	+EPORT=<op>[,<param1>...]	

	<p>Response</p> <ul style="list-style-type: none"> <li>• +EPORT: &lt;param2&gt;</li> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;op&gt;: integer             <ul style="list-style-type: none"> <li>0 display port assignment for applications/users.</li> <li>1 reassign port for the specific applications/users and store in nvdm.</li> <li>2 switch old port to specific port for the specific applications/users.</li> <li>3 modify parameters of port service devices.</li> <li>4 show parameters of port service devices</li> </ul> </li> <li>• &lt;param1&gt;... more parameters in AT command             <ul style="list-style-type: none"> <li>If &lt;op&gt; is 1 or 2, &lt;param1&gt;... is &lt;owner_name&gt;,&lt;port_id&gt; in AT command</li> <li>If &lt;op&gt; is 3, &lt;param1&gt;... is &lt;port_id&gt;,&lt;baudrate&gt; in AT command</li> <li>If &lt;op&gt; is 4, &lt;port_id&gt;,&lt;baudrate&gt; in AT response</li> </ul> </li> <li>• &lt;owner_name&gt; string             <p>Application name that uses port service. ### +EPORT Examples

AT+EPORT=0	display port assignment for applications/users
+EPORT:	
uls,2	
connl,1	

```

emmi,0
OK

AT+EPORt=1,emmi,0           reassign port for the GKI and store in NVDM.
OK

AT+EPORt=3,0,921600          set UART0's baud rate to 921600bps.
OK

AT+EPORt=4                  show current parameters stored in NVDM.
+EPORt:
0,921600
1,115200
2,115200
3,115200
4,none
5,none

OK

```

### 3.5.2.9. AT+CMADC

AT+CMADC		Read ADC
Test Command		<p>AT+CMADC=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>+CMADC: (0-1)</li> <li>OK</li> </ul>
Execution command		<p>AT+CMADC=&lt;channel&gt;</p> <p>Response</p> <ul style="list-style-type: none"> <li>+CMADC: &lt;voltage&gt;</li> <li>OK</li> <li>If error is related to wrong AT syntax: +CMADC: Over range! ERROR</li> </ul>
Parameters	<channel>	integer type 0 Read ADC from ADC0 (Pin38) 1 Read ADC from ADC1(Currently not supported)
	<voltage>	integer type, 0-1399. Indicate the ADC voltage.
Scope	Channel Specific	
Reference	Note	

#### +CMADC Examples

```

AT+CMADC=?
+CMADC: (0-1)
OK

AT+CMSYSCTRL=0             //ADC0

```

+CMADC: 977mV

OK

AT+CMADC=0

+CMADC: Over range!

ERROR

### 3.5.2.10. AT+CMSYSCTRL

The command enable/disable output of the sleep/net status.

<b>AT+CMSYSCTRL</b>		<b>Enable output of sleep/net status</b>										
Test Command		<p>AT+CMSYSCTRL=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +CMSYSTRL: (0-1)(0-2)</li> <li>• OK</li> </ul>

AT+CMSSYCTRL=0,1
OK

AT+CMSSYCTRL=1,1
OK

AT+CMSSYCTRL?
1,1
OK
  
```

#### **3.5.2.11. AT+TAUAC**

This command is required for periodic TAU value (T3412) allocated to the UE in E-UTRAN.

AT+TAUAC	Read periodic TAU value
Test Command	AT+TAUAC=?

	Response <ul style="list-style-type: none"> <li>• +TAUAC: (0-1116000)</li> <li>• OK</li> </ul>
	AT+TAUAC? <hr/> Response <ul style="list-style-type: none"> <li>• +TAUAC: &lt;periodic_tau&gt;</li> <li>• OK</li> </ul> <p>If error is related to wrong AT syntax +CME ERROR: &lt;err&gt;</p>
Parameter	<ul style="list-style-type: none"> <li>• &lt;periodic_tau&gt; integer type, range 0-1116000(s). Indicates the periodic TAU value (T3412) allocated to the UE in E-UTRAN.</li> </ul>
Scope	Generic
Reference	Note

#### +ICCID examples

```
AT+TAUAC=?  
+TAUAC: (0-1116000)  
OK
```

```
AT+TAUAC?  
+TAUAC: 3240  
OK
```

#### 3.5.2.12. AT+ICCID

This command is required for Windows 7 NDIS driver. It is used to read the USIM ICCID field (EFIccId).

AT+ICCID		Read USIM ICCID File
Execution command		AT+ICCID <hr/> Response <ul style="list-style-type: none"> <li>• +ICCID: &lt;ICCID&gt;</li> <li>• OK</li> </ul> <p>If error is related to wrong AT syntax +CME ERROR: &lt;err&gt;</p>
Parameter		<ul style="list-style-type: none"> <li>• &lt;ICCID&gt; International Circuit Card (ICC) ID of the (U)SIM. Formatted as a numeric string without double quotes. The string can be up to a maximum of 20 digits long.</li> </ul>
Scope	Generic	
Reference	Note	

#### +ICCID examples

AT+ICCID	Execution command
+ICCID: 56979649586978380293	
OK	

### 3.5.2.13. AT+CLPLMN

Clear PLMN, EARFCN, PCI attachment record.

AT+CLPLMN		Clear PLMN, EARFCN, PCI attachment record						
Execution command		AT+CLPLMN Response <ul style="list-style-type: none"> <li>+CLPLMN: &lt;status&gt;</li> <li>OK</li> </ul> If error is related to wrong AT syntax <ul style="list-style-type: none"> <li>+CME ERROR: &lt;err&gt;</li> </ul>						
Parameter		<ul style="list-style-type: none"> <li>&lt;status&gt; result of clear record               <table> <tr><td>0</td><td>Successful</td></tr> <tr><td>1</td><td>NVDM corrupt</td></tr> <tr><td>2</td><td>Other failure</td></tr> </table> </li> </ul>	0	Successful	1	NVDM corrupt	2	Other failure
0	Successful							
1	NVDM corrupt							
2	Other failure							
Scope		Generic						
Reference		Note						

#### +CLPLMN examples

AT+CLPLMN +CLPLMN: 0 OK	Execution command Clear record success
-------------------------------	---

### 3.5.2.14. AT\*ENGINFO

This command is used to query current network status, and modem status information for serving cell.

AT*ENGINFO		Report Network State
Test Command		AT*ENGINFO=? Response <ul style="list-style-type: none"> <li>*ENGINFO: (list of supported &lt;mode&gt;)</li> <li>OK</li> </ul>
Execution command		AT*ENGINFO=<mode> Response <ul style="list-style-type: none"> <li>If &lt;mode&gt; = 0 display serving cell and up to 4 neighbor cell information:               <ul style="list-style-type: none"> <li>*ENGINFOSC:                   &lt;sc_earfcn&gt;,&lt;sc_earfcn_offset&gt;,&lt;sc_pci&gt;,&lt;sc_cellid&gt;,[&lt;sc_rsrp&gt;],[&lt;sc_rsrq&gt;],[&lt;sc_rssi&gt;],[&lt;sc_snr&gt;],&lt;sc_band&gt;,&lt;sc_tac&gt;,[&lt;sc_ecl&gt;],[&lt;sc_tx_pwr&gt;]</li> <li>[&lt;CR&gt;&lt;LF&gt;]*ENGINFONC:&lt;nc_earfcn&gt;,&lt;nc_earfcn_offset&gt;,&lt;nc_pci&gt;,&lt;nc_rsrp&gt;</li> <li>[...]</li> <li>OK</li> </ul> </li> <li>If &lt;mode&gt; = 1 display data transfer information only if modem in RRC-CONNECTED state:               <ul style="list-style-type: none"> <li>*ENGINFODT:                   &lt;RLC_UL_BLER&gt;,&lt;RLC_DL_BLER&gt;,&lt;MAC_UL_BLER&gt;,&lt;MAC_DL_BLER&gt;,&lt;MAC_</li> </ul> </li> </ul>

Parameters	<ul style="list-style-type: none"> <li>• <code>UL_total_bytes</code>, <code>MAC_DL_total_bytes</code>, <code>MAC_UL_total_HARQ_TX</code>, <code>MAC_DL_total_HARQ_RX</code>, <code>MAC_UL_HARQ_re_TX</code>, <code>MAC_DL_HARQ_re_RX</code></li> <li>◦ OK</li> <li>• If error is related to wrong AT syntax or incorrect <code>&lt;mode&gt;</code> or UE in incorrect state           <ul style="list-style-type: none"> <li>◦ +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
	<p><code>&lt;mode&gt;</code> Integer value indicating requested engineering information. 0: Radio information for serving and neighbor cells</p> <p>Serving Cell/Neighbor Cell information:</p>
	<p><code>&lt;sc_earfcn&gt;</code> Integer value indicating the EARFCN for serving cell. Range 0-262143</p>
	<p><code>&lt;sc_earfcn_offset&gt;</code> Integer value indicating the EARFCN offset for serving cell: 0: Offset of -2 1: Offset of -1 2: Offset of -0.5 3: Offset of 0 4: Offset of 1</p>
	<p><code>&lt;sc_pci&gt;</code> Integer value indicating the serving cell physical cell ID. Range 0 – 503.</p>
	<p><code>&lt;sc_cellid&gt;</code> String type; four byte (28 bit) cell ID in hexadecimal format for serving cell.</p>
	<p><code>&lt;sc_rsrp&gt;</code> Signed integer indicating serving cell RSRP value in units of dBm (can be negative value). Available only in RRC-IDLE state.</p>
	<p><code>&lt;sc_rsrq&gt;</code> Signed integer indicating serving cell RSRQ value in units of dB (can be negative value). Available only in RRC-IDLE state.</p>
	<p><code>&lt;sc_rssi&gt;</code> Signed integer indicating serving cell RSSI value in units of dBm (can be negative value). Available only in RRC-IDLE state.</p>
	<p><code>&lt;sc_snr&gt;</code> Signed integer value. Last SNR value for serving cell in units of dB. Available only in RRC-IDLE state.</p>
	<p><code>&lt;sc_band&gt;</code> Integer value; current serving cell band</p>
	<p><code>&lt;sc_tac&gt;</code> String type; two byte tracking area code (TAC) in hexadecimal format (e.g. "00C3" equals 195 in decimal).</p>
	<p><code>&lt;sc_ecl&gt;</code> Integer value. Last Enhanced Coverage Level (ECL) value for serving cell. Range 0-2.</p>
	<p><code>&lt;sc_tx_pwr&gt;</code> Signed integer value indicating current UE transmit power. Units of cBm Centibels relative to one milliwatt (can be negative value).</p>
	<p><code>&lt;nc_earfcn&gt;</code> Integer value indicating the EARFCN for neighbor cell. Range 0-262143</p>
	<p><code>&lt;nc_earfcn_offset&gt;</code> Integer value indicating the EARFCN offset for neighbor cell: 0: Offset of -2 1: Offset of -1 2: Offset of -0.5 3: Offset of 0 4: Offset of 1</p>
	<p><code>&lt;nc_pci&gt;</code> Integer value indicating the neighbor cell physical cell ID. Range 0-503.</p>
	<p><code>&lt;nc_rsrp&gt;</code> Signed integer indicating neighbor cell RSRP value in units of dBm (can be negative value).</p>
<p>Data Transfer Information:</p>	
<p><code>&lt;RLC_UL_BLER&gt;</code> Integer value. Represented in % value (range 0 to 100). UL block error rate (as per IRQ) in RLC. Calculated over all established RLC AM radio bearers. Calculated from the beginning of successfully established/resumed RRC connection or since previous AT*ENGINFO query with <code>&lt;mode&gt;=1</code>, whichever is later. Only valid in RRC-CONNECTED state.</p>	
<p><code>&lt;RLC_DL_BLER&gt;</code> Integer value. Represented in % value (range 0 to 100). DL block error rate</p>	

	<p>(as per ARQ) in RLC. Calculated over all established RLC AM radio bearers. Calculated from the beginning of successfully established / resumed RRC connection, or since previous AT*ENGINFO query with &lt;mode&gt;=1, whichever is later. Available only in RRC-CONNECTED state.</p>
<MAC_UL_BLER>	Integer value. Represented in % value (range 0 to 100). UL block error rate (as per HARQ) in MAC for UL-SCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state.
<MAC_DL_BLER>	Integer value. Represented in % value (range 0 to 100). DL block error rate (as per HARQ) in MAC for DL-SCH, excluding BCCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state.
< MAC_UL_total_bytes>	Integer value. Total number of transport block bytes (re)transmitted on UL-SCH. Calculated for UL-SCH over all HARQ transmissions and retransmissions. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: bytes
<MAC_DL_total_bytes>	Integer value. Total number of transport block bytes (re)transmitted on DL-SCH, excluding BCCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: bytes
<MAC_UL_total_HARQ_TX>	Integer value. Total number of HARQ (re)transmissions for transport blocks on UL-SCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: (re)transmissions
< MAC_DL_total_HARQ_TX>	Integer value. Total number of HARQ (re)transmissions for transport blocks on DL-SCH, excluding BCCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: (re)transmissions
< MAC_UL_HARQ_re_TX>	Integer value. Number of HARQ retransmissions for transport blocks on UL-SCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: retransmissions
<MAC_DL_HARQ_re_TX>	Integer value. Number of HARQ retransmissions for transport blocks on DL-SCH, excluding BCCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC- CONNECTED state. Unit: retransmissions.
<RLC_UL_tput>	Integer value. RLC uplink throughput. Calculated over all established RLC AM radio bearers. Calculated from the beginning of successfully established / resumed RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: kbytes / s
<RLC_DL_tput>	Integer value. RLC downlink throughput. Calculated over all established RLC AM radio bearers. Calculated from the beginning of successfully established / resumed RRC connection, or since previous AT*ENGINFO

	query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: kbits / s <MAC_UL_tput> Integer value. UL throughput in MAC for UL-SCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: kbits / s <MAC_DL_tput> Integer value. DL throughput in MAC for DL-SCH, excluding BCCH. Calculated from the beginning of successfully established / resumed / re-established RRC connection, or since previous AT*ENGINFO query with <mode>=1, whichever is later. Available only in RRC-CONNECTED state. Unit: kbits / s
Scope	Channel specific
Reference	<p>Note</p> <ul style="list-style-type: none"> <li>If modem is not in RRC-CONNECTED state then *ENGINFODT: will not be generated for &lt;mode&gt; = 1. Only OK response will be generated.</li> </ul>

```

OK

Remove lock

### 3.5.2.16. AT\*SPCHSC

This command is used to select new or old scrambling code for NPCSCH. This is because code has been updated by 3GPPP, and UE needs to select correct code for network.

AT*SPCHSC Set Scrambling Algorithm for NPDSCH	
Test Command	<p>AT*SPCHSC=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>*SPCHSC: (0-1)</li> <li>OK</li> </ul>
Read command	<p>AT*SPCHSC?</p> <p>Response</p> <ul style="list-style-type: none"> <li>*SPCHSC: &lt;mode&gt;</li> <li>OK</li> </ul>
Execution command	<p>AT*SPCHSC=&lt;mode&gt;</p> <p>Response</p> <ul style="list-style-type: none"> <li>OK</li> <li>If error is related to wrong AT syntax or incorrect &lt;mode&gt;</li> </ul>

	<ul style="list-style-type: none"> <li>o +CME ERROR: &lt;err&gt;</li> </ul>
Parameters	<mode>      0: New algorithm (default) 1: Old algorithm
Scope	Generic
Reference	Note

#### \*SPCHSC examples

AT*FRCLLCK=1,10,3,301	Lock to EARFCN 10, offset 0, PCI 301
OK	
AT*FRCLLCK=0	Remove lock
OK	
AT+SPCHSC=1	Select old algorithm
OK	

#### 3.5.2.17. AT\*CGDEFCONT

This command is used to set the PSD connection settings for PDN connection on power up. In NB-IOT, when you attach to the NB-IOT network on power-on then you must also perform a PDN connection setup. In order to allow this to happen we must store PDN connection settings in NVRAM to be used by the modem during the attach procedure.

Note, that if this command is not entered, there will already be default settings stored in NVRAM at compile time.

Note that this command is similar in syntax to AT+CGDCONT, but without the <cid> parameter, and with additional parameters <username> and <password>.

AT*CGDEFCONT      Set Default PSD Connection Settings									
Test Command	<p>AT*CGDEFCONT=?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• *CGDEFCONT: (List of supported &lt;PDP_type&gt;)</li> <li>• OK</li> </ul>								
Read command	<p>AT*CGDEFCONT?</p> <p>Response</p> <ul style="list-style-type: none"> <li>• *CGDEFCONT:&lt;PDP_type&gt;,&lt;APN&gt;,&lt;username&gt;,&lt;password&gt;</li> <li>• OK</li> </ul>								
Execution command	<p>AT*CGDEFCONT=&lt;PDP_type&gt;[,&lt;APN&gt;[,&lt;username&gt;[,&lt;password&gt;]]]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• If error is related to wrong AT syntax or unsupported &lt;mode&gt;:           <ul style="list-style-type: none"> <li>o +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>								
Parameters	<p>&lt;PDP_type&gt; (Packet Data Protocol type) a string parameter which specifies the type of packet data protocol :</p> <table border="0"> <tr> <td>IP</td> <td>Internet Protocol (IETF STD 5)</td> </tr> <tr> <td>IPV6</td> <td>Internet Protocol, version 6 (IETF RFC 2460)</td> </tr> <tr> <td>IPV4V6</td> <td>Virtual &lt;PDP_type&gt; introduced to handle dual IP stack UE capability (see 3GPP TS 24.301).</td> </tr> <tr> <td>Non-IP</td> <td>Transfer of Non-IP data to external packet data Network</td> </tr> </table>	IP	Internet Protocol (IETF STD 5)	IPV6	Internet Protocol, version 6 (IETF RFC 2460)	IPV4V6	Virtual <PDP_type> introduced to handle dual IP stack UE capability (see 3GPP TS 24.301).	Non-IP	Transfer of Non-IP data to external packet data Network
IP	Internet Protocol (IETF STD 5)								
IPV6	Internet Protocol, version 6 (IETF RFC 2460)								
IPV4V6	Virtual <PDP_type> introduced to handle dual IP stack UE capability (see 3GPP TS 24.301).								
Non-IP	Transfer of Non-IP data to external packet data Network								

	(see 3GPP TS 24.301).
<APN>	(Access Point Name) a string parameter that is a logical name that is used to select the GGSN or the external packet data network. If the value is null or omitted, then the subscription value will be requested.
<username>	String value. Username for the connection to the service provider
<password>	String value. Password for the connection to the service provider
Scope	Generic
Reference	Note

### \*CGDEFCONT examples

- Mobile in CFUN=0 Mode

```

AT*CGDEFCONT=?           Test command
*MCGDEFCONT: ("IP","IPV6","IPV4V6","Non-IP")   IP versions supported
OK

AT*CGDEFCONT?           Read command
*CGDEFCONT: "IP","internet","username","password"   Default settings in
                                                               NVRAM
OK

AT*CGDEFCONT="IPV4V6","web.o2.co.uk","web","web"      Set command. Set
                                                               default settings for O2 network, IPV4/V6
OK

AT+CFUN=1
OK

(Mobile attaches to NB-IOT network and sets up PDN connection using
default settings set with AT*CGDEFCONT)

AT+CGACT?
+CGACT: 1,1
OK

```

#### 3.5.2.18. AT\*PLNMURI

This command is used to enable/disable generation of unsolicited result code to indicate when the aggregated “maximum number of packets” for a particular PLMN changes.

AT*PLMNURI		PLMN Rate Control Indication
Test Command	AT*PLMNURI=?	
	Response <ul style="list-style-type: none"> <li>*PLMNURI: (list of supported &lt;mode&gt;s)</li> <li>OK</li> </ul>	
Read command	AT*PLMNURI?	
	Response <ul style="list-style-type: none"> <li>*PLMNURI:               &lt;mode&gt;,&lt;urc_active&gt;[,&lt;Serving_PLMN_rate_control_value&gt;]</li> </ul>	

	<ul style="list-style-type: none"> <li>• OK</li> </ul>
Execution command	AT*PLMNURI=<mode> Response <ul style="list-style-type: none"> <li>• OK</li> </ul>
Unsolicited result code	*PLMNURI:<urc_active>[,<Serving_PLMN_rate_control_value>]
Parameters	<ul style="list-style-type: none"> <li>• &lt;mode&gt;: integer type                             <ul style="list-style-type: none"> <li>◦ 0 – No unsolicited result codes are forwarded to the TE.</li> <li>◦ 1 – Forward unsolicited result codes to the TE.</li> </ul> </li> <li>• &lt;urc_active&gt;: integer type. Indicates if uplink rate control is active or not:                             <ul style="list-style-type: none"> <li>◦ 0 – inactive</li> <li>◦ 1 – active</li> </ul> </li> <li>• &lt;Serving_PLMN_rate_control_value&gt;: integer type; indicates the maximum number of uplink messages the UE is allowed to send in a 6 minute interval. This refers to octet 3 to 4 of the Serving PLMN rate control IE as specified in 3GPP TS 24.301 sub-clause 9.9.4.28.</li> </ul>
Scope	Channel Specific
Reference	Note

### 3.5.2.19. AT\*NBIOTDT

This command is used to set the NB-IOT data type per APN (Normal or Exceptional data).

AT*MNBIOTDT      NB-IOT Data Type	
Test Command	AT*NBIOTDT=? Response <ul style="list-style-type: none"> <li>• *NBIOTDT: (list of supported &lt;types&gt;s)</li> <li>• OK</li> </ul>
Read command	AT*NBIOTDT? Response <ul style="list-style-type: none"> <li>• Displays &lt;type&gt; for all active PDP contexts:                             <ul style="list-style-type: none"> <li>◦ [*NBIOTDT:&lt;cid&gt;,type]</li> <li>◦ [&lt;CR&gt;&lt;LF&gt;*MNBIOTDT:&lt;cid&gt;,&lt;type&gt;]</li> <li>◦ [...]</li> <li>◦ OK</li> </ul> </li> </ul>
Execution command	AT*NBIOTDT=<type>[,<cid>[,<cid>[,...]]]
	Response <ul style="list-style-type: none"> <li>• OK</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;type&gt;: integer type                             <ul style="list-style-type: none"> <li>◦ 0      Normal data (default)</li> <li>◦ 1      Exceptional data</li> </ul> </li> <li>• &lt;cid&gt;: integer type. Specifies a particular PDP context definition.                      If no &lt;cid&gt;s are specified the command sets &lt;type&gt; for all active PDP contexts.</li> </ul>
Scope	Generic
Reference	Note <ul style="list-style-type: none"> <li>• The UE will not remember this setting over sleep cycles (i.e. the UE will fall</li> </ul>

---

	back to default setting after sleep)
--	--------------------------------------

---

### 3.5.2.20. AT\*NBIOTRAI

This command is used to set the NB-IOT release assistance indication as follows:

- No information available
- TE will send only 1 UL packet and no DL packet is expected
- TE will send only 1 UL packet and only 1 DL packet is expected

AT*NBIOTRAI		NB-IOT release assistance indication
Test Command		AT*NBIOTRAI=?  Response <ul style="list-style-type: none"> <li>• *NBIOTRAI: (range of supported &lt;rai&gt;s)</li> <li>• OK</li> </ul>
Read command		AT*NBIOTRAI?  Response <ul style="list-style-type: none"> <li>• *NBIOTRAI: &lt;rai&gt;</li> <li>• OK</li> </ul>
Execution command		AT*NBIOTRAI=<rai>  Response <ul style="list-style-type: none"> <li>• OK</li> </ul>
Parameters		<ul style="list-style-type: none"> <li>• &lt;rai&gt;: integer type. Specifies release assistance information:               <ul style="list-style-type: none"> <li>◦ 0: No information available (or none of the other options apply) (default)</li> <li>◦ 1: TE will send only 1 UL packet and no DL packets expected</li> <li>◦ 2: TE will send only 1 UL packet and only 1 DL packet expected</li> </ul> </li> </ul>
Scope		Generic
Reference		Note <ul style="list-style-type: none"> <li>• This command may never be required as it is likely that the TE will not know this information.</li> <li>• Modem applies specified &lt;rai&gt; value only to next UL packet sent by TE</li> <li>• TE will not remember this setting over sleep cycles (i.e. will fall back to default after sleep)</li> </ul>

### 3.5.2.21. AT\*HOMENW

This command is required for the NDIS driver in order to display the home network information in alphanumeric (short and long format) and numeric format. This information is extracted from the IMSI.

AT*HOMENW		Display Home Network Information
Execution command		AT*HOMENW  Response <p>UE returns the home network information (extracted from the IMSI) in numeric, short alpha and long alpha formats.</p> <ul style="list-style-type: none"> <li>• *HOMENW: &lt;oper long alpha&gt;, &lt;oper short alpha&gt;, &lt;oper numeric&gt;</li> <li>• OK</li> </ul>

	If error is related to wrong AT syntax <ul style="list-style-type: none"> <li>• +CME ERROR: &lt;err&gt;</li> </ul>
Parameter	<ul style="list-style-type: none"> <li>• &lt;oper long alpha&gt; Home operator in long alphanumeric format</li> <li>• &lt;oper short alpha&gt; Home operator in short alphanumeric format</li> <li>• &lt;oper numeric&gt; Home operator in numeric GSM Location Area Identification number format</li> </ul>
Scope	Generic
Reference	Note

**\*HOMENW examples**

AT\*HOMENW Execution command. Display home network  
Information  
\*HOMENW: "46004", "46004", "46004"  
OK

**3.5.2.22. AT\*CMSPN**

AT*CMSPN Service Provider Name (from SIM)	
Read command	AT*CMSPN? Response <ul style="list-style-type: none"> <li>• *CMSPN: &lt;spn&gt;,&lt;display mode&gt;</li> <li>• +CME ERROR: &lt;err&gt;</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;spn&gt; string type; service provider name on SIM</li> <li>• &lt;display mode&gt;           <ul style="list-style-type: none"> <li>0 no PLMN. Already registered on PLMN</li> <li>1 display PLMN</li> </ul> </li> </ul>
Scope	<ul style="list-style-type: none"> <li>○ Channel Specific (reads from generic SPN setting)</li> </ul>
Reference	Note

**3.5.2.23. AT\*CMUNSOL**

AT*CMUNSOL Extra Unsolicited Indications	
Test command	AT*MUNSOL=? Response <ul style="list-style-type: none"> <li>• *CMUNSOL: (list of supported &lt;ind&gt;s)</li> </ul>
Set command	AT*MUNSOL=<ind>,<mode> Response <ul style="list-style-type: none"> <li>• OK</li> <li>• +CME ERROR: &lt;err&gt;</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;ind&gt; values currently reserved by the present document:           <ul style="list-style-type: none"> <li>○ "SQ" Signal Quality Displays signal strength and quality information for the current serving cell in form *MSQN:&lt;rssl&gt;,&lt;rsrq&gt;,&lt;rsrp&gt;when values are measured by the protocol stack. Note that the current signal quality level is displayed immediately if this unsolicited event is enabled and there is already valid signal quality information available.</li> <li>○ "FN" Forbidden Networks Available Only</li> </ul> </li> </ul>

	<p>When returning to a non-registered state this indicates whether all the available PLMNs are forbidden. The unsolicited message is of the form *MFPLMN.</p> <ul style="list-style-type: none"> <li>o “MW” SMS Message Waiting On receiving an SMS (as indicated by the +CMTI indication) the SMS is decoded and checked to see if it contains one or more of the message waiting indications (i.e. voicemail, email, fax etc). If so, an unsolicited indication is shown in the form for each message type: <b>*MMWI:</b> &lt;Bearer Id&gt;,&lt;MWI Status&gt;[,&lt;MWI Flag State&gt;[,&lt;MW Number&gt;]] See detailed of AT*MMWI command for more details of how to configure the *MMWI unsolicited event.</li> <li>o “SM” Additional SMS Information Displays additional information about SMS events in the form of Unsolicited messages of the following format <b>*MSMSINFO:</b> &lt;CMS error info&gt; where &lt;CMS error info&gt; is a standard CMS error in the format defined by the AT+CMEE command i.e. either a number or a string.</li> <li>• &lt;mode&gt;           <ul style="list-style-type: none"> <li>o 0 disable</li> <li>o 1 enable</li> <li>o 2 query</li> </ul> </li> <li>• &lt;rssii&gt; Signed integer indicating serving cell RSSI value in units of dBm (can be negative value).</li> <li>• &lt;sc_rsrp&gt; Signed integer indicating serving cell RSRP value in units of dBm (can be negative value).</li> <li>• &lt;sc_rsrq&gt; Signed integer indicating serving cell RSRQ value in units of dB (can be negative value).</li> </ul>
Scope	Channel specific.
Reference	Note

### 3.5.2.24. AT\*CMBAND<sup>[\*]</sup>

This command is used to lock UE to optionally Band.

AT*CMBAND Set and Query NB-IOT Operation Band	
	AT*CMBAND=?
Test command	Response <ul style="list-style-type: none"> <li>• *CMBAND: list of valid &lt;op_band&gt;s</li> <li>• OK</li> </ul>
Read command	AT*CMBAND? Response <ul style="list-style-type: none"> <li>• *CMBAND:&lt; op_band &gt;s</li> <li>• OK</li> </ul>
Set command	AT*CMBAND=<op_band>[,<op_band>s] Response <ul style="list-style-type: none"> <li>• OK</li> </ul>

[\*] AT\*CMBAND Set command Only support the version of M5311-MLVH0S01 and Later version. The version of M5311-CM is not supported.

Parameters	<op_band>	Integer type, Optional range 0,3,5,8
	0	Restore Defaults, <op_band>s=1,3,5,8,28
	1,3,5,8,28	Selected NB-IOT band
Scope	Channel specific.	
Reference	Note	<ul style="list-style-type: none"> <li>This command takes effect following the issuance of rebooting system.</li> </ul>

### 3.5.2.25. AT\*MATWAKEUP

This command is used to enable an unsolicited result code on a channel that indicates when the module is woken up after a deep sleep.

AT*MATWAKEUP      Enable Deep Sleep Wakeup Indication	
Test Command	<b>AT*MATWAKEUP=?</b>  Response <ul style="list-style-type: none"> <li>*MATWAKEUP: (0-1)</li> <li>OK</li> </ul>
Read command	<b>AT*MATWAKEUP?</b>  Response <ul style="list-style-type: none"> <li>*MATWAKEUP: &lt;enable&gt;</li> <li>OK</li> </ul>
Execution command	<b>AT*MATWAKEUP=&lt;enable&gt;</b>  Response <ul style="list-style-type: none"> <li>OK</li> <li>If error is related to wrong AT syntax or incorrect &lt;mode&gt;                             <ul style="list-style-type: none"> <li>+CME ERROR:&lt;err&gt;</li> </ul> </li> </ul>
Unsolicited result code	*WAKEUP
Parameters	<ul style="list-style-type: none"> <li>&lt;enable&gt;                             <ul style="list-style-type: none"> <li>0: Disable indication on this channel when module wakes up from deep sleep (default)</li> <li>1: Enable indication on this channel when module wakes up from deep sleep</li> </ul> </li> </ul>
Scope	Channel specific
Reference	Note

#### \*MATWAKEUP examples

<pre>AT*MATWAKEUP=1 OK</pre>	Enable wakeup indication
(Modem wakes up after deep sleep)	
<pre>*MATWAKEUP</pre>	Modem fully woken up and ready to receive AT commands/data

### 3.5.2.26. AT\*SLEEP

This command is used to enable an unsolicited result code on a channel that indicates when the module is

entered after a deep sleep.

<b>AT*SLEEP</b>		<b>Enable Deep Sleep Enter Indication</b>
Test Command		AT*SLEEP=? Response <ul style="list-style-type: none"> <li>• *SLEEP: (0-1)</li> <li>• OK</li> </ul>
Read command		AT*SLEEP? Response <ul style="list-style-type: none"> <li>• *SLEEP:&lt;enable&gt;</li> <li>• OK</li> </ul>
Execution command		AT*SLEEP=<enable> Response <ul style="list-style-type: none"> <li>• OK</li> <li>• If error is related to wrong AT syntax or incorrect &lt;mode&gt;               <ul style="list-style-type: none"> <li>◦ +CME ERROR:&lt;err&gt;</li> </ul> </li> </ul>
Unsolicited result code		*GOTOSLEEP
Parameters		<ul style="list-style-type: none"> <li>• &lt;enable&gt;               <ul style="list-style-type: none"> <li>◦ 0: Disable indication on this channel when module enters deep sleep (default)</li> <li>◦ 1: Enable indication on this channel when module enters deep sleep</li> </ul> </li> </ul>
Scope		Channel specific
Reference		Note

### \*SLEEP examples

```
AT*SLEEP=1
OK
```

Enable wakeup indication

```
(Modem goes in to deep sleep)
*GOTOSLEEP
```

Modem will goto deep sleep mode immediately

### 3.5.2.27. AT\*WAKETIME

Triggering a falling edge of WAKEUP\_IN will wake up light/deep sleep. This command is used to config Wake-up time after WAKEUP\_IN triggering.

<b>AT*WAKETIME</b>		<b>Config wake-up time after WAKEUP_IN triggering</b>
Test Command		AT*WAKETIME=? Response <ul style="list-style-type: none"> <li>• *WAKETIME: (1-300)</li> <li>• OK</li> </ul>
Read command		AT*WAKETIME? Response <ul style="list-style-type: none"> <li>• *WAKETIME: &lt;time&gt;</li> </ul>

	<ul style="list-style-type: none"> <li>• OK</li> </ul>
Execution command	AT*WAKETIME=<time> Response <ul style="list-style-type: none"> <li>• OK</li> <li>• If error is related to wrong AT syntax or incorrect &lt;mode&gt;             <ul style="list-style-type: none"> <li>◦ +CME ERROR:&lt;err&gt;</li> </ul> </li> </ul>
Parameters	<time> integer type, 1-300s, Default 10s.
Scope	Channel specific
Reference	Note

### \*WAKETIME examples

```

AT* WAKETIME=?
*WAKETIME: (10-300)
OK

AT*WAKETIME?
*WAKETIME: 10 // Default 10s. WAKEUP_IN will lock the wake-up
                  mode for 10s from deep/light sleep.
OK

AT*WAKETIME=5 // WAKEUP_IN will lock the wake-up mode for 5s
                  from deep/light sleep.
OK
    
```

#### 3.5.2.28. AT\*ENTERSLEEP

Triggering a falling edge of WAKEUP\_IN will wake up light/deep sleep and lock the wake-up mode for some time (see AT\*WAKETIME). If the terminal does not do network related services, it will still be in the light/deep sleep mode, After the wake-up time elapse, it will enter sleep mode again. This command can be used to enter light/deep sleep immediately in this case without waiting for the wake-up timer to end.

By default, AT command will also lock the wake-up mode for 10s. If the terminal does not do network related services, The terminal will enter sleep mode at least 10 s after you send the last AT command, This command can be used to enter light/deep sleep immediately in this case.

AT*ENTERSLEEP Enter light/deep sleep mode immediately	
Execution command	AT*ENTERSLEEP Response <ul style="list-style-type: none"> <li>• OK</li> <li>• If error is related to wrong AT syntax or incorrect &lt;mode&gt;             <ul style="list-style-type: none"> <li>◦ +CME ERROR:&lt;err&gt;</li> </ul> </li> </ul>
Parameters	None
Scope	Channel specific
Reference	Note

### \*ENTERSLEEP examples

```

AT*MATWAKEUP=1          //Enable wakeup indication
OK

AT*SLEEP=1              //Enable wakeup indication
OK

AT*WAKETIME=20          //Set wake-up time 20s
OK

*GOTOSLEEP

*MATWAKEUP             //Triggering a falling edge of WAKEUP_IN, It
                        will keep wake-up mode 20s

AT*ENTERSLEEP           //Enter deep sleep immediately
OK

*GOTOSLEEP              //Enter deep sleep

*MATWAKEUP              //Triggering a falling edge of WAKEUP_IN

AT*WAKETIME=5            //Set wake-up time 5s, AT command will lock
                        the wake-up mode as 10s.
OK

AT*ENTERSLEEP           //Enter deep sleep immediately
OK

*GOTOSLEEP              //Enter deep sleep

```

### 3.5.2.29. AT\*EDRXCFG<sup>[\*]</sup>

The set command controls the setting of the UEs eDRX parameters. The command controls whether the UE wants to apply eDRX or not, as well as the requested eDRX value and requested paging time window value for each specified type of access technology.

The set command also controls the presentation of an unsolicited result code +CEDRXP:

<AcTtype>[,<Requested\_eDRX\_value>[,<NW-provided\_eDRX\_value>[,<Paging\_time\_window>]]] when <n>=2 and there is a change in the eDRX parameters provided by the network.

A special form of the command can be given as \*EDRXCFG=3. In this form, eDRX will be disabled and data for all parameters in the command \*EDRXCFG will be removed or, if available, set to the manufacturer specific default values.

AT*EDRXCFG                    eDRX configuration	
Test Command	AT*EDRXCFG=?
	Response <ul style="list-style-type: none"> <li>• *EDRXCFG: (list of supported &lt;mode&gt;s),(list of supported &lt;AcTtype&gt;s),(list of supported &lt;Requested_eDRX_value&gt;s) ,(list of supported &lt;Requested_Paging_time_window_value&gt;s)</li> <li>• OK</li> </ul>

[\*] Only the M5311\_CM version is supported.

	AT*EDRXCFIG?												
Read command	<p>Response</p> <ul style="list-style-type: none"> <li>• *ERDRXCFIG: &lt;AcTtype&gt;,&lt;Requested_eDRX_value&gt;[,&lt;Requested_Paging_time_window_value&gt;]</li> <li>• OK</li> <li>• If error is related to wrong AT syntax or operation not allowed: +CME ERROR: &lt;err&gt;</li> </ul>												
Execution command	<p>AT*EDRXCFIG=[&lt;mode&gt;,[&lt;AcTtype&gt;[,&lt;Requested_eDRX_value&gt;[,&lt;Requested_Paging_time_window_value&gt;]]]]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• If error is related to wrong AT syntax: +CME ERROR: &lt;err&gt;</li> </ul>												
Unsolicited result code	*+CEDRXP:<AcT-type>[,<Requested_eDRX_value>[,<NWprovided_eDRX_value>[,<Paging_time_window>]]]												
Parameters	<p>&lt;mode&gt; integer type, indicates to disable or enable the use of eDRX in the UE. This parameter is applicable to all specified types of access technology, i.e. the most recent setting of &lt;mode&gt; will take effect for all specified values of &lt;AcT&gt;.</p> <table> <tr> <td>0</td><td>Disable the use of eDRX</td></tr> <tr> <td>1</td><td>Enable the use of eDRX</td></tr> <tr> <td>2</td><td>Enable the use of eDRX and enable the unsolicited result code +CEDRXP:&lt;AcT-type&gt;[,&lt;Requested_eDRX_value&gt;[,&lt;NWprovided_eDRX_value&gt;[,&lt;Paging_time_window&gt;]]]</td></tr> <tr> <td>3</td><td>Disable the use of eDRX and discard all parameters for eDRX or, if available, reset to the manufacturer specific default values.</td></tr> </table> <p>&lt;AcT-type&gt; integer type, indicates the type of access technology. This AT-command is used to specify the relationship between the type of access technology and the requested eDRX value.</p> <table> <tr> <td>0</td><td>Access technology is not using eDRX. This parameter value is only used in the unsolicited result code.</td></tr> <tr> <td>5</td><td>E-UTRAN (NB-S1 mode)</td></tr> </table> <p>&lt;Requested_eDRX_value&gt; string type; half a byte in a 4-bit format. The eDRX value refers to bit 4 to 1 of octet 3 of the Extended DRX parameters information element (see sub-clause 10.5.5.32 of 3GPP TS 24.008). Scope	<ul style="list-style-type: none"> <li>Generic for set command</li> <li>Channel specific for read command.</li> </ul>																				
Reference	<p>Note</p> <p>"No modification" for a parameter setting means that the system configurations for that parameter is not to be changed from its current setting.</p> <p>Note that for NB-IOT, AT^SYSCONFIG? will always respond with:</p>																				

	<mode>: Automatic <acqorder>: Automatic
--	--

#### ^SYS CONFIG Examples

AT^SYS CONFIG=?	Test command
^SYS CONFIG: (2, 16), (0, 3), (0-2), (1, 3, 4)	
OK	
AT^SYS CONFIG?	Read command
^SYS CONFIG: 2, 0, 1, 1	Automatic selection, automatic network order, roaming supported, PS domain.
OK	
AT^SYS CONFIG=2, 0, 0, 1	Execute command: Disable roaming
OK	
AT^SYS CONFIG?	Read command
^SYS CONFIG: 2, 0, 0, 1	Roaming now disabled
OK	

#### 3.5.2.32. AT^CARD MODE

Returns mode of currently inserted SIM. If SIM not exist, or any error caused in this request, CME ERROR is returned.

AT^CARD MODE Request SIM/USIM Mode	
Execution command	<b>AT^CARD MODE</b> Response <ul style="list-style-type: none"> <li>• ^CARD MODE: &lt;sim_type&gt;</li> <li>• OK</li> </ul> Displays the current SIM/USIM card type. <ul style="list-style-type: none"> <li>• If SIM not present or other SIM access error:                             <ul style="list-style-type: none"> <li>◦ +CME ERROR: &lt;err&gt;</li> </ul> </li> </ul>
Parameters	<sim_type>: SIM card type: 0: Unknown SIM type 1: SIM 2: USIM
Scope	Channel Specific
Reference	Note

#### ^CARD MODE Examples

AT^CARD MODE	Execute command
^CARD MODE: 2	USIM inserted.
OK	

#### 3.5.2.33. AT^SPN

Returns Service Provider Name stored in SIM/USIM. For USIM card, file type shall be specified since there are two EFSPN files that are separately located in GSM and USIM directory. Please refer to 3GPP TS 31.102 V5.9.0 for format of EFSPN file.

Service Provider Name includes operator name, such as CMCC, and brand name, such as GoTone and M-Zone.  
 Service Provider Name is usually stored in SIM/USIM with file name EFSPN and file ID 6F46.

<b>AT^SPN</b>		<b>Read Service Provider Name</b>
Test Command	AT^SPN=?	
	Response	<ul style="list-style-type: none"> <li>• ^SPN: (list of supported &lt;spn_types&gt;)</li> <li>• OK</li> </ul>
Execution command	AT^SPN=<spn_type>	
	Response	<ul style="list-style-type: none"> <li>• ^SPN: &lt;disp_rplmn&gt;,&lt;coding&gt;,&lt;spn_name&gt;</li> <li>• OK</li> <li>• If error is related to wrong AT syntax or wrong parameter value:           <ul style="list-style-type: none"> <li>◦ +CME ERROR:&lt;err&gt;</li> </ul> </li> <li>• Returns service provider name.</li> </ul>
Parameters	<spn_type>: SPN type:	
	0: GSM SPN	
	1: USIM SPN	
	<displ_rplmn>: Whether to display RPLMN:	
	0: No display	
	1: Display	
	99: Invalid, and no need to read <spn_name>	
	<coding>: Coding scheme for <spn_name>:	
	0: GSM 7 bit default	
	1: RAW mode (i.e. with original format).	
	<spn_name>: String type value indicating SPN, not more than 16 bytes in format Specified by <coding>.	
	Scope	Channel specific.
Reference	Note	
	<ul style="list-style-type: none"> <li>• &lt;spn_type&gt; field is ignored as it will display the SPN for the currently selected directory. This is done to prevent system re-start which may have other undesirable effects on the Modem software during normal operation.</li> </ul>	

### **^SPN Examples**

AT^SPN=?	Test command
^SPN: (0,1)	
OK	
AT^SPN?	Read command
ERROR	
AT^SPN=1	Execute command. Read USIM SPN.
^SPN:1,7,"Vodafone UK"	
OK	

#### **3.5.2.34. \*SMPUBLKD Unsolicited Indication**

This proprietary unsolicited events indicates on startup (power on or transition from CFUN=0 mode to CFUN=1 mode) if the (U)SIM is PUK blocked and therefore unusable. This unsolicited event can also be generated if the

user enters incorrect PUK code 10 times.

<b>*MSMPUKEBLKD</b> <b>SIM Blocked Unsolicited Indication</b>	
Unsolicited result code	*SMPUKEBLKD Generated on startup or when PUK code is entered incorrectly 10 times, when the (U)SIM is PUK Blocked and therefore unusable.
Parameters	None
Scope	Generic
Reference	Note <ul style="list-style-type: none"> <li>• Unsolicited event is always generated if the SIM is (or becomes) PUK blocked.</li> </ul>

### **\*SMPUKEBLKD examples**

Modem powered up in CFUN=0 mode with PUK blocked SIM

AT+CFUN=1	
OK	
*SMPUKEBLKD	Unsolicited Event indicates SIM is PUK blocked and unusable.

Modem powered up in CFUN=0 mode with PUK entry required (3 retries left)

AT+CFUN=1	
OK	
+CPIN: SIM PUK	
AT+CPIN="33333333","0000","0000"	Incorrect PUK code
+CME ERROR: incorrect password	
AT+CPIN="33333333","0000","0000"	Incorrect PUK code
+CME ERROR: incorrect password	
AT+CPIN="33333333","0000","0000"	Incorrect PUK code
+CPIN: NOT READY	
*SMPUKEBLKD	

### **3.5.2.35. \*ATREADY**

This unsolicited result code is generated on any new AT channel that is enabled. It is not configurable and will always be generated when a channel is enabled. This URC is not generated on channels re-enabled after wakeup from deep sleep.

<b>*MATREADY</b> <b>AT Channel Enabled Unsolicited Result Code</b>			
Unsolicited result code	*ATREADY: <ready_status>		
Parameters	<ready_status> <table border="0"> <tr> <td>1</td> <td>AT channel ready (only valid value)</td> </tr> </table>	1	AT channel ready (only valid value)
1	AT channel ready (only valid value)		
Scope	<ul style="list-style-type: none"> <li>○ Channel Specific</li> </ul>		
Reference	Note		

**\*ATREADY URC examples**

(AT channel enabled)  
\*ATREADY: 1

## 4. Network Related Proprietary AT Command Interface

This chapter introduces the supported proprietary platform AT command set on M5311. We support single AT command. When executing the previous AT command is finished, the next AT command will be executed.

### 4.1. PDN Command

#### 4.1.1 AT+EGACT

Activate or deactivate a specified PDN context.

There are three kinds of responses for both the activation requirement and the deactivation requirement. If the PDN context is active/inactive, “+EGACT=<cid>,<type>,<result>[,<activated\_pdp\_type>] OK” is returned immediately for activation/deactivation requirement. If not, “+EGACT=<cid> OK” is returned first and URC “+EGACT=<cid>,<type>,<result>[,<activated\_pdp\_type>]” is reported for the activation/deactivation result latter. If any error occurs, such as invalid parameter(s), “ERROR” is returned immediately. In any case, activated\_pdp\_type only exists for the activation requirement.

Besides, URC “+EGACT=<cid>,<type>” is reported when passive deactivation occurs.

For the activation requirement, the format of the EGACT is

“+EGACT=<op>,<pdp\_type>,<apn>,<user\_name>,<pwd>[,<bearer\_type>[,<sim\_id>]]”, while for the deactivation requirement, the format is “+EGACT=<op>,<cid>”. For the purpose of normalization, the format of EGACT is “+EGACT=<op>,<pdp\_type/cid>[,<apn>,<user\_name>,<pwd>[,<bearer\_type>[,<sim\_id>]]]”.

AT+EGACT		Activate or deactivate a PDN context
Set command		<p>AT+EGACT=&lt;op&gt;,&lt;pdp_type/cid&gt;[,&lt;apn&gt;,&lt;user_name&gt;,&lt;pwd&gt;[,&lt;bearer_type&gt;[,&lt;sim_id&gt;]]]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• +EGACT=&lt;cid&gt;,&lt;type&gt;,&lt;result&gt;[,&lt;activated_pdp_type&gt;]</li> <li>• OK</li> <li>• +EGACT=&lt;cid&gt;</li> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters		<ul style="list-style-type: none"> <li>• &lt;op&gt; integer type;           <ul style="list-style-type: none"> <li>0 deactivation requirement</li> <li>1 activation requirement</li> </ul> </li> <li>• &lt;pdp_type/cid&gt; integer type;           <ul style="list-style-type: none"> <li>If &lt;op&gt; is 0, it is pdp_type. Otherwise, it is cid. pdp_type: It is the pdp_type wanted to activate.</li> <li>1 IPv4</li> <li>2 IPv6</li> <li>3 IPv4v6</li> <li>4 Non-IP</li> </ul> </li> <li>• &lt;cid&gt; It is a numeric parameter specifying a particular PDP context. Here it should be equal to the &lt;cid&gt; returned by the activation</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;apn&gt; response string type;It is the access point name which is mandatory for the activation requirement and should be omitted for the deactivation requirement.</li> <li>• &lt;user_name&gt;string type; It is the user name for access to the IP network which is mandatory for the activation requirement and should be omitted for the deactivation requirement.</li> <li>• &lt;pwd&gt;: string type; It is the password for access to the IP network which is mandatory for the activation requirement and should be omitted for the deactivation requirement.</li> <li>• &lt;bearer_type&gt; integer type; It is the type of bearer wanted to activate which is optional for the activation requirement and should be omitted for the deactivation requirement. 1 NBIOT (Only NBIOT is supported currently)</li> <li>• &lt;sim_id&gt;: integer type; It is the id of the SIM Card wanted to use which is optional for the activation requirement and should be omitted for the deactivation requirement. 1 SIM Card 1 (Only SIM Card 1 is supported currently).</li> <li>• &lt;cid&gt;: integer type; It is a numeric parameter specifying a particular PDP context.</li> <li>• &lt;type&gt;: integer type; <ul style="list-style-type: none"> <li>0 Result/URC for deactivation requirement</li> <li>1 Result/URC for activation requirement</li> <li>2 URC for passive deactivation</li> </ul> </li> <li>• &lt;result&gt; integer type; <ul style="list-style-type: none"> <li>0 failure</li> <li>1 success</li> </ul> </li> <li>• &lt;activated_pdp_type&gt;: integer type; It is the pdp_type actually activated. <ul style="list-style-type: none"> <li>1 IPv4</li> <li>2 IPv6</li> <li>3 IPv4v6</li> <li>4 Non-IP</li> </ul> </li> </ul>
Reference	<p>Note</p> <ul style="list-style-type: none"> <li>• This command name is temporary and may be changed in the later release.</li> </ul>

**+EGACT Examples**

```
AT+EGACT=1,1,"apn_example","username_example","password_example" Activate a
                           PDN context
+EGACT=1
```

OK	Return OK immediately for no error
+EGACT=1,1,1,1	Notify activation result via URC
AT+EGACT=0,1 +EGACT=1	Deactivate a PDN context
OK	Return OK immediately for no error
+EGACT=1,0,1	Notify deactivation result via URC

## 4.2. Network Command

### 4.2.1 AT+PING

This command sends an ICMP packet to the specified host address.

AT+PING initiates the sending of a PING packet to the specified address. This will either cause a packet to be returned if the remote system is connected and responding to PING packets, or no response will be received. A maximum of 1 ping attempts will be tried. If none of the packets receive a response within the timeout period, an error will be raised.

AT+PING		Test IP network connectivity to a remote host
Set command	AT+PING=<remote addr>[,<p_size>[,<timeout>[,<p_count>[,<type>]]]]	
	Response <ul style="list-style-type: none"><li>• OK</li><li>• ERROR</li></ul>	
Unsolicited result code	Display test result, such as: +PING: <remote addr>,<rtt> +PINGERR: 1	
Parameters	<ul style="list-style-type: none"> <li>• &lt;remote addr&gt; address of system sending the message, IPv4: A dot notation IP address</li> <li>• &lt;p_size&gt; integer size in bytes of echo packet payload. Range of 8-1460, Default 64</li> <li>• &lt;timeout&gt; ping timeout, if this ping packet acknowledgement received timeout, considering it as a lost packet.</li> <li>• &lt;p_count&gt; integer, number of packet to send. Default 3</li> <li>• &lt;type&gt; integer, ipv4 or ipv6, 0 - ipv4, 1 - ipv6. Default 0</li> <li>• &lt;rtt&gt; ping latency result</li> </ul>	
Reference	Note	

#### +PING Examples

```
at+ping=183.232.231.173,16,8000,10 //start ping
OK
+PING: 183.232.231.173,,3190 //ping result of first ping packet
+PING: 183.232.231.173,,3700
+PING: 183.232.231.173,,1520
+PING: 183.232.231.173,,1500
+PING: 183.232.231.173,,1510
```

```
+PING: 183.232.231.173,,1510
+PING: 183.232.231.173,,1460
+PING: 183.232.231.173,,1120
+PING: 183.232.231.173,,1750
+PING: 183.232.231.173,,1710
--- 183.232.231.173 ping statistics --- //pings result
10 packets transmitted, 10 received, 0% packet loss
rtt min/avg/max = 1120/1897/3700
```

#### 4.2.1 AT+DNSSER

This command set DNS server address, it takes effect following the issuance of 'OK' result code with the current command line. The DNS server address will effect on all DNS associated network services, such as MQTT/HTTP/TLS/OneNET, it very important to make sure that the dns servers address is valid.

AT+ DNSSER		set DNS server address
Test Command	AT+DNSSER=?	
	Response	
	<ul style="list-style-type: none"> <li>• +DNSSER: &lt;server_ip&gt;, (0-1), (0-1)</li> <li>• OK</li> <li>• ERROR</li> </ul>	
Read command	AT+DNSSER?	
	Response	
Execution command	+DNSSER=<server_ip>[,<dns_id>[,<ip_type>]]	
	Response	
	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>	
Parameters	<server_ip>	string, DNS server address. Default DNS server address is: 119.29.29.29 114.114.114.114
	<dns_id>	integer, DNS ID. Default 0. 0 preferred server address. 1 secondary server address. If preferred server address is invalid, it will request Secondary.
	<ip_type>	integer, type of the DNS return ip address. Default 0 0 IPv4 1 IPv6
	Scope	Generic
	Reference	Note

#### +DNSSER Examples

```
AT+DNSSER="180.76.76.76",0,0          //Set preferred ipv4 server address.
OK
```

```
AT+DNSSER="223.5.5.5",1,0          //Set secondary ipv4 server address.  
OK  
  
AT+DNSSER?  
+DNSSER: 0,180.76.76.76  
+DNSSER: 1,223.5.5.5  
OK
```

#### 4.2.2 AT+CMDNS

This command send a DNS request to DNS server, and return the parsed ip address.

AT+CMDNS Send a DNS request													
Set command	AT+CMDNS =<domain>[,<ip_type>[,<server_ip>]] Response <ul style="list-style-type: none"><li>• OK</li><li>• ERROR</li></ul>												
Unsolicited result code	+CMDNS: <ip_address>												
Parameters	<table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 30%; padding-right: 10px;">&lt;domain&gt;</td><td>string, domain name.</td></tr> <tr> <td>&lt;ip_type&gt;</td><td>integer, type of the DNS return ip address.default 0</td></tr> <tr> <td>    0</td><td>IPv4</td></tr> <tr> <td>    1</td><td>IPv6</td></tr> <tr> <td>&lt;server_ip&gt;</td><td>string, DNS server address, Only effective once.</td></tr> <tr> <td>&lt;ip_address&gt;</td><td>A dot notation IP address</td></tr> </table>	<domain>	string, domain name.	<ip_type>	integer, type of the DNS return ip address.default 0	0	IPv4	1	IPv6	<server_ip>	string, DNS server address, Only effective once.	<ip_address>	A dot notation IP address
<domain>	string, domain name.												
<ip_type>	integer, type of the DNS return ip address.default 0												
0	IPv4												
1	IPv6												
<server_ip>	string, DNS server address, Only effective once.												
<ip_address>	A dot notation IP address												
Reference	Note												

#### +CMDNS Examples

```
AT+EGACT=1,1,"cmiot","",","          //activate pdn connection  
OK  
  
+IP: 10.212.231.112  
+EGACT:1,1,1,1  
AT+CMDNS= "iot.10086.cn"           // request iot.10086.cn DNS service  
OK  
  
+CMDNS: 183.230.40.127            //receive ip address
```

#### 4.2.3 AT+IPSTART

This command creates a TCP or UDP socket and connect to remote server.

AT+IPSTART Creates a TCP or UDP socket	
Set command	AT+IPSTART=<sockid>,<type>,<addr>,<port>[,<cid>[,<domian>[,<protocol>]]]]

	<b>Response</b> <ul style="list-style-type: none"> <li>• OK</li> <li>• Or ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;sockid&gt; integer, socket channel number, 0-5</li> <li>• &lt;type&gt; string           <ul style="list-style-type: none"> <li>“TCP” TCP socket</li> <li>“UDP” UDP socket</li> <li>“RAW” RAW socket</li> </ul> </li> <li>• &lt;addr&gt; string, remote address</li> <li>• &lt;port&gt; integer, remote port</li> <li>• &lt;cid&gt; integer, PDP context ID, AT+EGACT response.</li> <li>• &lt;domain&gt; integer, default 2           <ul style="list-style-type: none"> <li>2 IPv4</li> <li>10 IPv6</li> </ul> </li> <li>• &lt;protocol&gt; number of packet to send, default 0, only 0 supported now.           <ul style="list-style-type: none"> <li>0 IP</li> <li>1 ICMP</li> <li>6 TCP</li> <li>17 UDP</li> </ul> </li> </ul>
Reference	Note

#### +IPSTART Examples

```

AT+EGACT=1,1,"cmiot","",""           //activate pdn connection
OK

+IP: 10.212.231.112
+EGACT:1,1,1,1
at+ipstart=0,"TCP","47.93.217.230",2008
                                         //setup and connect to 47.93.217.230:2008
OK

CONNECT OK                                //connect to 47.93.217.230:2008 OK

+IPRD: 0,15,hello, CMCC IOT      //receive 37 bytes data "hello, CMCC IOT"
from 47.93.217.230:2008

```

#### 4.2.4 AT+IPLPORT

This command used to bind to local port. Used chiefly set local port.

AT+IPLPORT	
Bind local address and local port	
Set command	<b>AT+IPLPORT=&lt;socket_id&gt;,&lt;local_port&gt;</b>  <b>Response</b> <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>

Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket id, refer to AT+IPSTART</li> <li>• &lt;local_port&gt; integer, local port.</li> </ul>
Reference	Note

#### 4.2.5 AT+IPSEND

This command used to send data to network.

The response "OK" just mean the ATCMD format is right and data have been put to socket, waiting for send.

AT+IPSEND Send data to remote via socket	
Set command	TCP : AT+IPSEND=<socket_id>,[<data_len>],<data>[,<pri_flag>]
	UDP : AT+IPSEND=<socket_id>,[<data_len>],<data>[,<addr>,<port>[,<pri_flag>]]
	Response
	<ul style="list-style-type: none"> <li>• +IPSEND: &lt;socket_id&gt;,&lt;sent_len&gt;</li> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket id, AT+ESOC's response.</li> <li>• &lt;data_len&gt; integer, length of data. Default 0.</li> <li>• &lt;data&gt; string, raw_data. When &lt;data_len&gt; is greater than 0, &lt;data&gt; is hex format string , else if &lt;data_len&gt; set to 0 or omit, &lt;data&gt; is normal string.</li> <li>• &lt;addr&gt; string, remote address, only valid in UDP socket.</li> <li>• &lt;port&gt; integer, remote port, only valid in UDP socket.</li> <li>• &lt;pri_flag&gt;           <ul style="list-style-type: none"> <li>0 IPTOS reliability, default</li> <li>1 IPTOS lowdelay</li> <li>2 IPTOS hroughput</li> <li>3 IPTOS lowcost</li> </ul> </li> <li>• &lt;sent_len&gt; integer, actual sent-out data length</li> </ul>
Reference	Note

#### +IPSEND Examples

```

at+ipsend=0,0,"this is normal string"           //send normal string
+IPSEND: 0,21
OK

at+ipsend=0,,,"this is another normal string"   //send normal string
+IPSEND: 0,29
OK

at+ipsend=0,2,"3132"                           //send hex string
+IPSEND: 0,2
OK

For TCP socket:
at+ipsend=0,0,"this is normal string",1        //send normal string with

```

```

priority flag of lowdelay
+IPSEND: 0,21
OK

For UDP socket:
at+ipsend=0,0,"this is normal string",,,1      //send normal string with
                                                priority flag of lowdelay

+IPSEND: 0,21
OK

at+ipsend=0,0,"this is normal string",,,1      //send normal string with
                                                priority flag of lowdelay

+IPSEND: 0,21
OK

at+ipsend=0,0,"this is normal string", "183.230.40.150",36000,1
                                                //send normal string with priority flag of lowdelay to Specify ip
                                                address
+IPSEND: 0,21
OK

```

#### 4.2.6 AT+IPCLOSE

This command used to disconnect and close socket.

If the socket is TCP, it will start to send TCP FIN packet; if the socket is UDP, there is no packet being sent.

AT+IPCLOSE		Close Socket
Set command	+IPCLOSE=<socket_id>	
	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>	
Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket id.</li> </ul>	
Reference	Note	

#### 4.2.7 AT+IPRCFG

This command used to set socket receive configuration.

AT+IPRCFG		Set Socket Receive Configuration
Set command	+IPRCFG=<auto_receive>[,<mode>[,<hex>]]	
	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>	
Parameters	<ul style="list-style-type: none"> <li>• &lt;auto_receive&gt; integer, set to 1, when IP data come, directly output to AT port; when set to 0, use +IPRD command to read IP data manually.</li> <li>• &lt;mode&gt; integer, control data format mode.</li> </ul>	

	<p>0            +IPRD: &lt;socket_id&gt;,&lt;data_len&gt;,&lt;data&gt;</p> <p>1            &lt;data&gt;</p> <p>2            +IPRD:               &lt;socket_id&gt;,&lt;remote_addr&gt;,&lt;remote_port&gt;,&lt;data_len&gt;,&lt;data&gt;</p> <ul style="list-style-type: none"> <li>•    &lt;hex&gt;                      integer, data in hex format.</li> </ul>
Reference	Note

## +IPRCFG Examples

```
at+ipstart=0,"TCP","47.93.217.230",2008
OK
CONNECT OK
at+iprcfg?                                //current setting
+IPRCFG: 1,0,0
OK
+IPRD: 0,15,hello, CMCC IOT      //auto receive 15 Bytes data
at+iprcfg=1,1,0                            //only output <data>
OK
hello, CMCC IOT                          //receive 15 Bytes data
at+iprcfg=1,2,0                            //set <mode>=2
OK
+IPRD: 0,"47.93.217.230",2008,15,hello, CMCC IOT    //show ip and port
at+iprcfg=1,2,1                            //data in hex mode
OK

+IPRD: 0,"47.93.217.230",2008,15,68656C6C6F2C20434D434320494F54
at+iprcfg=0,2,1                            //manually receive data
OK

+IPNMI: 0,15                               //data coming

at+iprd=0,512                             //read IP data
+IPRD: 0,"47.93.217.230",2008,15,68656C6C6F2C20434D434320494F54
OK
```

## 4.2.8 AT+IPRD

This command used to read socket data manually.

AT+IPRCFG Set Socket Receive Configuration	
Set command	+IPRD=<socket_id>,<data_length>
	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	[+IPRD: ][<socket_id>][<remote_addr>,<remote_port>][data_len,]data
Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket channel identity.</li> <li>• &lt;data_length&gt; integer, required read data length, if actual received is less than &lt;data_length&gt;, return actual data length in +IPRD response.</li> </ul>

Reference	Response format refers to +IPRCFG command
-----------	---

#### 4.2.9 +IPNMI

Indicated there is received some data from network.

+IPNMI		Socket data from network URC
Unsolicited result code	+IPNMI: <socket_id>,<data_len>	
Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket channel id.</li> <li>• &lt;data_len&gt; integer, length of data incoming. If read length is less than &lt;data_length&gt; using +IPRD command, the remaining data will unsolicited after some seconds if not read anymore.</li> </ul>	
Reference	Note	

#### 4.2.10 AT+IPKPA

Set TCP socket keepalive parameters.

AT+IPKPA		TCP Keepalive Configuration
Set command		AT+IPKPA=<socket_id>,<keepalive>,<keep_idle>,<keep_interval>,<keep_cnt>
	Response	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Read command		AT+IPKPA=<socket_id>
	Response	<ul style="list-style-type: none"> <li>• +IPKPA: &lt;socket_id&gt;,&lt;keepalive&gt;,&lt;keep_idle&gt;,&lt;keep_interval&gt;,&lt;keep_cnt&gt;</li> <li>• OK</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket channel identity.</li> <li>• &lt;keepalive&gt; integer, enable/disable keepalive mode, default 0.</li> <li>• &lt;keep_idle&gt; integer, idle time to trigger keepalive mechanism in s, default 120</li> <li>• &lt;keep_interval&gt; integer, check alive interval in s, default 30.</li> <li>• &lt;keep_cnt&gt; integer, maximum check alive times if last check fail, default 9</li> </ul>	
Reference	Note	

#### 4.2.11 AT+IPSACK

Query Socket send and read bytes statistics.

AT+IPSACK		Query socket statistics such as tx/rx length and tcp unacked bytes
Read command		AT+IPSACK=<socket_id> Response <ul style="list-style-type: none"> <li>• &lt;sent&gt;,&lt;received&gt;[,&lt;rx_buf_left&gt;,&lt;unsent&gt;,&lt;unacked&gt;]</li> <li>• OK</li> <li>• ERROR</li> </ul>

Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket channel identity.</li> <li>• &lt;sent&gt; integer, total sent bytes of specified socket.</li> <li>• &lt;received&gt; integer, total received bytes of specified socket</li> <li>• &lt;rx_buf_left&gt; integer, total sent buffer left, default max 4KB. Only valid in TCP socket</li> <li>• &lt;unsent&gt; integer, data not sent. Only valid in TCP socket</li> <li>• &lt;unacked&gt; integer, data send out and ack not received from remote host. Only valid in TCP socket</li> </ul>
Reference	Note

#### 4.2.12 AT+IPSTATUS

Query Socket connection status.

AT+IPSTATUS	Query socket Status
Read command	AT+IPSTATUS=<socket_id>  Response <ul style="list-style-type: none"> <li>• &lt;socket_id&gt;,&lt;type&gt;,&lt;addr&gt;,&lt;port&gt;,&lt;stat&gt;</li> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;socket_id&gt; integer, socket channel identity.</li> <li>• &lt;type&gt; string, TCP or UDP.</li> <li>• &lt;addr&gt; string, remote address</li> <li>• &lt;port&gt; integer, remote port</li> <li>• &lt;stat&gt; string               <ul style="list-style-type: none"> <li>"IP INITIAL"</li> <li>"IP START"</li> <li>"IP CONFIG"</li> <li>"PDP ACT"</li> <li>"IP STATUS"</li> <li>"CONNECTING"</li> <li>"CONNECTED"</li> <li>"CLOSING"</li> <li>"CLOSED"</li> <li>"PDP DEACT"</li> <li>"CONNECT FAIL"</li> </ul> </li> </ul>
Reference	Note

#### 4.2.13 Create a TCP socket example

```

AT+EGACT=1,1,"apn","user_name","pwd"      //activate apn
+EGACT=<cid>,1,1,1
OK
at+ipstart=0,"TCP","47.93.217.230",2008 //connect to 47.93.217.230:2008
OK

```

OK

#### 4.2.14 Create a UDP socket example

```
AT+EGACT=1,1,"apn","user_name","pwd"      //activate apn
+EGACT=<cid>,1,1,1
OK
at+ipstart=0,"UDP","47.93.217.230",2008 //create udp socket
OK

at+ipstatus=0                      //udp always in connected state
+IPSTATUS: 0,"UDP","47.93.217.230",2008,"CONNECTED"
OK

at+ipsend=0,0,"1233",,1           //send 4 bytes udp data to 47.93.217.230:2008
                                  //with lowdelay priority
+IPSEND: 0,4
OK

at+ipsend=0,2,"1233"             //send 2 bytes udp data to 47.93.217.230:2008
+IPSEND: 0,2
OK

at+ipsend=0,0,"1233","183.230.40.150",36000,1
                                  //send 4 bytes udp data to specified address
                                  //with lowdelay priority
+IPSEND: 0,4
OK

at+ipsend=0,0,"1233","47.93.217.230",2008
                                  //send 4 bytes udp data to specified address
+IPSEND: 0,4
OK

+IPRD: 0,11,ffffffffffff          //received 11 bytes data

at+ipsack=0
+IPSACK: 40,11
OK

at+iprcfg=1,2,0                  //set receive mode to show remote address
OK

+IPRD: 0,"47.93.217.230",2008,5,hello
                                  // show remote address when receiving data
at+ipclose=0
OK

at+ipstatus=0
```

```
+IPSTATUS: 0,"","","",0,""
OK
```

## 4.3. MQTT Command

### 4.3.1 AT+MQTTCFG

This command is used to config the MQTT client

AT+MQTTCFG Config the Client	
Set command	AT+MQTTCFG=<server>,<port>,<id>,<keepAlive>,[<user>],[<passwd>],<clean>,<encrypt>
	Response <ul style="list-style-type: none"> <li>• OK</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;server&gt; string, MQTT server IP address</li> <li>• &lt;port&gt; string, MQTT server port</li> <li>• &lt;id&gt; string, client ID, should be unique</li> <li>• &lt;cmdtimeout&gt; integer, ack should be received during the interval</li> <li>• &lt;keepAlive&gt; integer, keep alive interval (s)</li> <li>• &lt;user&gt; string, user name</li> <li>• &lt;passwd&gt; string, password</li> <li>• &lt;clean&gt; integer, clean session(0-1)</li> <li>• &lt;encrypt&gt; integer, 0 : TCP , 1 : SSL</li> </ul>
Reference	Note if encrypt =1 ,write the CA in flash before using

#### +MQTTCFG Examples

```
AT+MQTTCFG=183.230.40.39,6002,4069959,15,75829,
II0u0oFUG1guk20ornTKluzAcnM=,1,0
OK
```

### 4.3.2 AT+MQTTOPEN

This command is used to send MQTT connection packet.

AT+MQTTOPEN Send Connection Packet	
Set command	AT+MQTTOPEN=<usrFlag>,<pwdFlag>,<willFlag>,[<willRetain>,<willQos>,<will-topic>,<will-msg>]
	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+MQTTOPEN: <connack_rc>,<sessionPresent>
Parameters	<ul style="list-style-type: none"> <li>• &lt;usrFlag&gt; integer, weather to use username (0-1)</li> <li>• &lt;pwdFlag&gt; integer, weather to use pwdFlag (0-1)</li> <li>• &lt;willFlag&gt; integer, weather to set willmsg (0-1)</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;willRetain&gt; interger, retained flag(0-1)</li> <li>• &lt;willQos&gt; integer, message Qos(0-2)</li> <li>• &lt;will-topic&gt; string, topic name of will</li> <li>• &lt;will-mesg&gt; string, message of will</li> </ul>
Reference	Note

#### +MQTTOPEN Examples

```
AT+MQTTOPEN=1,1,0
+MQTTOPEN: OK
AT+MQTTOPEN=1,1,1,1,1,mywill,bye
+MQTTCONACK: FAIL
```

#### 4.3.3 AT+MQTTSTAT

This command is used to query MQTT client's state.

AT+MQTTSTAT Query MQTT Client's State													
Query command	AT+MQTTSTAT?  Response <ul style="list-style-type: none"> <li>• +MQTTSTAT:&lt;stat&gt;</li> <li>• OK</li> <li>• ERROR</li> </ul>												
Parameters	<ul style="list-style-type: none"> <li>• &lt;stat&gt;               <table style="margin-left: 20px;"> <tr><td>0</td><td>UNINITIALED</td></tr> <tr><td>1</td><td>INITIALED</td></tr> <tr><td>2</td><td>DISCONNECTED</td></tr> <tr><td>3</td><td>CONNECTING</td></tr> <tr><td>4</td><td>RECONNECTING</td></tr> <tr><td>5</td><td>CONNECTED</td></tr> </table> </li> </ul>	0	UNINITIALED	1	INITIALED	2	DISCONNECTED	3	CONNECTING	4	RECONNECTING	5	CONNECTED
0	UNINITIALED												
1	INITIALED												
2	DISCONNECTED												
3	CONNECTING												
4	RECONNECTING												
5	CONNECTED												
Reference	Note												

#### 4.3.4 AT+MQTTSUB

This command is used to send MQTT subscribe packet.

AT+MQTTSUB Send MQTT Subscribe Packet	
Set command	AT+MQTTSUB=<topic>,<Qos>,<index>  Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+MQTTSUBACK:<packet id>,<qos>,<topic name>
Parameters	<ul style="list-style-type: none"> <li>• &lt;topic&gt; string, topic of subscribe message</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;Qos&gt; integer, message Qos, can be 0, 1, or 2</li> <li>• &lt;index&gt; 0-text, 1-hex string</li> </ul>
Reference	Note

#### 4.3.5 AT+MQTTPUB

This command is used to send MQTT publish packet.

AT+MQTTPUB Send MQTT Publish Packet	
Set command	AT+MQTTPUB=<topic>,<Qos>,<retained>,<dup>,<message_len>,<message> Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+MQTTPUBACK: <packet_id>,<dup> (qos =1) +MQTTPUBREC: <packet_id>,<dup> +MQTTPUBCOMP: <packet_id>,<dup> (qos =2)
Parameters	<ul style="list-style-type: none"> <li>• &lt;topic&gt; string, topic of unsubscribe message</li> <li>• &lt;Qos&gt; integer, message Qos, can be 0, 1, or 2</li> <li>• &lt;retained&gt; interger, retained flag, can be 0 or 1</li> <li>• &lt;dup&gt; integer, duplicate flag, can be 0 or 1</li> <li>• &lt;message_len&gt; integer, length of publish message(option), if set to 0 or omitted, &lt;message&gt; will be parsed in text format, else hexidecimal format</li> <li>• &lt;message&gt; string, publish message</li> </ul>
Reference	Note

#### +MQTTPUB Examples

```
AT+MQTTPUB=pyr,1,0,0,3,7E7A7A      (HEX)
OK
AT+MQTTPUB=pyr,1,0,0,0,abcdef      (TEXT)
OK
```

#### 4.3.6 AT+MQTTUNSUB

This command is used to send MQTT unsubscribe packet.

AT+MQTTUNSUB Send MQTT Unsubscribe Packet	
Set command	+MQTTUNSUB=<topic> Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+MQTTUNSUBACK:<packet id>,<topic name>
Parameters	<ul style="list-style-type: none"> <li>• &lt;topic&gt; string, topic of unsubscribe message</li> </ul>

Reference	Note
-----------	------

#### 4.3.7 AT+MQTTDISC

This command is used to send MQTT disconnect packet.

<b>AT+MQTTDISC</b> Send MQTT Disconnect Packet	
Execute command	AT+MQTTDISC
	Response • OK • ERROR
Unsolicited result code	+MQTTDISC
Reference	Note

#### 4.3.8 AT+MQTTDEL

This command is used to delete MQTT client's configuration.

<b>AT+MQTTDEL</b> Delete MQTT Client's Configuration	
Execute command	AT+MQTTDEL
	Response • OK • ERROR
Reference	Note

#### 4.3.9 AT+MQTTTO

This command is used to set MQTT command timeout.

<b>AT+MQTTTO</b> Set MQTT Command Timeout	
Set command	AT+MQTTTO=<tiemout>
	Response • OK • ERROR
parameter	• <timeout> integer, mqtt command timeout in second, default 10s
Reference	Note

#### 4.3.10 +MQTTPUBLSH

This urc is used to receive MQTT publish packet.

<b>+MQTTPUBLISH</b> Receive MQTT Publish Packet	
Unsolicited result code	+MQTTPUBLISH: <dup>,<qos>,<retained>,<packet_id>,[<message_len>],<message>
Parameters	<ul style="list-style-type: none"> <li>• &lt;dup&gt; integer, duplicate flag, can be 0 or 1</li> <li>• &lt;qos&gt; integer, message Qos, can be 0, 1, or 2</li> <li>• &lt;retained&gt; integer, retained flag, can be 0 or 1</li> <li>• &lt;packet_id&gt; integer, the id of current packet</li> <li>• &lt;message_len&gt; integer, length of publish message</li> <li>• &lt;message&gt; string, publish message</li> </ul>
Reference	Note

#### 4.3.11 +MQTTTO

This urc is used to indicate timeout when user send a MQTT command without ACK during the setting time .

<b>+MQTTTO</b> Indicate Time Out	
Unsolicited result code	+MQTTTO:<cmd>
Parameters	<ul style="list-style-type: none"> <li>• &lt;cmd&gt; integer, mqtt command type           <ul style="list-style-type: none"> <li>1 connect timeout</li> <li>2 publish timeout</li> <li>3 subscribe timeout</li> <li>4 unsubscribe timeout</li> <li>5 ping timeout</li> <li>6 unkown timeout type</li> </ul> </li> </ul>
Reference	Note

### 4.4. HTTP/HTTPS Command

#### 4.4.1 AT+HTTPCREATE

This command is used to create an HTTP/HTTPS client instance. If <host> is start with “https://” , MT will create an HTTPS client.

<b>AT+HTTPCREATE</b> Create an HTTP/HTTPS Client instance	
Set command	AT+HTTPCREATE=<host>[,<auth_user>,<auth_passwd>]  Response <ul style="list-style-type: none"> <li>• +HTTPCREATE: &lt;httpclient_id&gt;</li> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;host&gt; http server host</li> <li>• &lt;auth_user&gt; authorization name [option]</li> <li>• &lt;auth_passwd&gt; authorization password [option]</li> <li>• &lt;httpclient_id&gt; indicator a http client instance</li> </ul> All option parameter should be exist or not exist in one command

Reference	Note
-----------	------

#### 4.4.2 AT+HTTPCFG

This command is used to configure the https instance.http don't need configuration.

AT+HTTPCFG Config an HTTPS Client instance	
	AT+HTTPCFG= <httpclient_id>,<type>[,<certificate>[,<encode_method>]]
Set command	Response <ul style="list-style-type: none"> <li>• +HTTPCFG: &lt;httpclient_id&gt;,&lt;type&gt;[,&lt;length&gt;]</li> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	<certificate>
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> <li>• &lt;type&gt;           <ul style="list-style-type: none"> <li>1 https server_cert</li> <li>2 https client_cert</li> <li>3 https client_pk</li> </ul> </li> <li>• &lt;certificate&gt; certificate</li> <li>• &lt;length&gt; the certificate length</li> <li>• &lt;encode_method&gt; integer, it is the encoded method used for &lt;certificate&gt;. 0 or NULL is for string encoding and it is the default value which can be omitted, 1 is for hex encoding. [option]</li> </ul>
Reference	Note: It must create httpclient instance first. If only input httpclient_id and type,UE will response current type cert information like: +HTTPCFG:0,1,1306 -----BEGIN CERTIFICATE----- ... ... -----END CERTIFICATE-----

#### 4.4.3 AT+HTTPHEADER

This command is used to set http/https header information.

AT+HTTPHEADER Config an HTTP/HTTPS Client Header	
	AT+HTTPHEADER= <httpclient_id>[,<header>[,<encode_method>]]
Set command	Response <ul style="list-style-type: none"> <li>• +HTTPHEADER: &lt;httpclient_id&gt;[,&lt;length&gt;]</li> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	<header>
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;header&gt; header</li> <li>• &lt;length&gt; the header length</li> <li>• &lt;encode_method&gt;: integer, it is the encoded method used for &lt;header&gt;. 0 or NULL is for string encoding and it is the default value which can be omitted, 1 is for hex encoding. [option]</li> </ul>
Reference	<p>Note:</p> <ul style="list-style-type: none"> <li>• if only input httpclient_id, the UE will return header information the header MAX size supported is 512 bytes</li> </ul>

**+HTTPHEADER example:**

```

AT+HTTPHEADER=0, 6170692D6B65793A4A4459694B794B6669344934734F4657654A73493453
                                         3343626C303D0d0a, 1
Or
AT+HTTPHEADER=0, "api-key:JDYiKyKfi4I4sOFWeJsI4S3Cb10=\r\n", 0 //set header
OK
AT+HTTPHEADER=0      //query header
+HTTPHEADER:0, 38

OK
api-key:JDYiKyKfi4I4sOFWeJsI4S3Cb10=

AT+HTTPHEADER=0, "" //clear header
Or
AT+HTTPHEADER=0,    //clear header
OK
AT+HTTPHEADER=0      //header is NULL
OK

```

#### 4.4.4 AT+HTTPCONTENT

This command is used to set http/https content information

AT+HTTPCONTENT Config an HTTP/HTTPS Client Content	
Set command	<b>AT+HTTPCONTENT=</b> <httpclient_id>[,<content_string>[,<encode_method>]] <b>Response</b> <ul style="list-style-type: none"> <li>• +HTTPCONTENT: &lt;httpclient_id&gt;[,&lt;length&gt;]</li> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	<content_string>
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> <li>• &lt;content_string&gt; content_string</li> <li>• &lt;length&gt; the content length</li> <li>• &lt;encode_method&gt;: integer, it is the encoded method used for &lt;content_string&gt;. 0 or NULL is for string encoding and it is the default value which can be omitted, 1 is for hex encoding. [option]</li> </ul>
Reference	<p>Note</p> <ul style="list-style-type: none"> <li>• if only input httpclient_id, the UE will return content information</li> </ul>

#### 4.4.5 AT+HTTPSEND

This command is used to send HTTP package to server with the created http instance.

<b>AT+HTTPSEND</b>		<b>Send HTTP/HTTPS Package</b>
Set command		AT+HTTPSEND= <httpclient_id>,<method>,<path>
	Response	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+HTTPCON: <httpclient_id>,<result>	
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> <li>• &lt;method&gt; http method           <ul style="list-style-type: none"> <li>0 HTTPCLIENT_GET</li> <li>1 HTTPCLIENT_POST</li> <li>2 HTTPCLIENT_PUT</li> <li>3 HTTPCLIENT_DELETE</li> </ul> </li> <li>• &lt;path&gt; the resource path on server, ex. “/html/login/index.html” meand the url full path is “&lt;host&gt;/html/login/index.html”</li> <li>• &lt;result&gt; tcp connect result           <ul style="list-style-type: none"> <li>OK</li> <li>ERROR</li> </ul> </li> </ul>	
Reference	Note:if the httpclient is not connected or being in receive httpserver data, this command will response error! Once send data out,UE will set being receiving flag, until http disconnected or receive done	

#### 4.4.6 AT+HTTPCLOSE

This command is used to close the created http instance.

<b>AT+HTTPCLOSE</b>		<b>Close the HTTP/HTTPS Client Instance</b>
Set command		AT+HTTPCLOSE=<httpclient_id>
	Response	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> </ul>	
Reference	Note	

#### 4.4.7 +HTTPNMIH

The response from host has 2 parts. This is the header part and content part will follow this URC.

<b>+HTTPNMIH</b>	<b>Header of the response from host</b>
------------------	---

Unsolicited result code	+HTTPNMIH: <httpclient_id>,<flag>,<header_length>,<header>
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> <li>• &lt; flag &gt; indicate if there are more data of the HTTP header</li> <li>• &lt; header_length &gt; the length of the header string</li> <li>• &lt;header&gt; header data of response</li> </ul>
Reference	Note

#### 4.4.8 +HTTPNMIC

The response from host has 2 parts. This is the content part and follow by the header part URC. And there are multi content URC follow one header URC .

+EHTTPNMIC Content of the response from host	
Unsolicited result code	+HTTPNMIC: <httpclient_id>,<flag>,<total_length>,<content_len>,<content>
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> <li>• &lt;flag&gt; indicate if there are more data of the HTTP content</li> <li>• &lt;total_length&gt; the total length of the content. It is got from header "Content-Length: xxx", so if the response is not 200 OK, maybe the value is -1</li> <li>• &lt;content_len&gt; content data length of current URC</li> <li>• &lt;content&gt; content data string</li> </ul>
Reference	Note

#### 4.4.9 +HTTPDICONN

When the URC send, there is some error happen on the http client. Normally is TCP connection is disconnected.

+HTTPERR HTTP/HTTPS Client connection error indicator	
Unsolicited result code	+HTTPDICONN: <httpclient_id>,<error_code>
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> <li>• &lt;error_code&gt; if it is -1, means disconnected by network problem. If -2, means connection is disconnected by remote host.</li> </ul>
Reference	Note <ul style="list-style-type: none"> <li>• If the URC send out, the HTTP client will be disconnected automatically.</li> </ul>

#### 4.4.10 +HTTPERR

When the URC send, there is some error happen on the http client. Normally is TCP connection is disconnected.

<b>AT+HTTPERR</b>		<b>HTTP/HTTPS Client connection error indicator</b>
Unsolicited result code	+HTTPERR=<httpclient_id>,<error_code>	
Parameters	<ul style="list-style-type: none"> <li>• &lt;httpclient_id&gt; the indicator of http client instance created by the AT+HTTPCREATE command.</li> <li>• &lt;response_code&gt; the http response code, not include 200</li> </ul>	
Reference Other Proprietary commands	if http receive response code not be 200, this URC will be output	

#### 4.4.11 HTTP/HTTPS Example

##### Get Texts from HTTP server

```

AT+HTTPCREATE="http://1i869245.iask.in:30686/"
+HTTPCREATE:0
OK

AT+HTTPSEND=0,0,"/"
OK

CONNECT OK

+HTTPNMIH:0,200,146,Server: Microsoft-IIS/5.1
X-Powered-By: ASP.NET
Content-Type: text/html
Accept-Ranges: bytes
ETag: "0c76c133e39c71:8f6"
Content-Length: 496

+HTTPNMIC:0,1,496,399
<html>

<head>
<meta http-equiv="Content-Type"
content="text/html; charset=gb2312">
<meta name="GENERATOR"
content="Microsoft FrontPage 4.0">
<meta name="ProgId"
content="FrontPage.Editor.Document">
</head>

<body>
<center>
<p>

</p>
<p><font face="宋体" size="2">成都众山科技邢薰郊?</font></p>
<p><font face="宋体" size="2">&nbsp;&nbsp; <a href

+HTTPNMIC:0,0,496,97
="http://www.zstel.com">HTTP://

```

```

WWW.ZSTEL.COM</a></font></p>
</center>
</body>

</html>

+HTTPDICONN:0,-2
OK

```

### POST Texts to HTTP server

```

Header: api-key:JDYiKyKfi4I4sOFWeJsI4S3Cb10=
Content-type:NULL(default)
Content-length:10
Content: {"RPM":22}

AT+HTTPCREATE="http://1i869245.iask.in:30686/"
+HTTPCREATE:0
OK

If use default encode(string),the AT Command is:
AT+HTTPHEADER=0,api-key:JDYiKyKfi4I4sOFWeJsI4S3Cb10=\r\n,0
OK

AT+HTTPCONTENT=0,{"RPM":22},0
OK

If use HEX encode,the AT Command is:
AT+HTTPHEADER=0,6170692D6B65793A4A4459694B794B6669344934734F4657654A734934533
343626C303D0d0a,1
OK

AT+HTTPCONTENT=0,7B2252504D223A32327D,1
OK

AT+HTTPSEND=0,1,"/"
OK

CONNECT OK

...
Note:in <Header>,the "\r\n" is need,stand for a newline.if user want to input
a char \r\n in defualt encode,an '\'should be add like this:
AT+HTTPHEADER=0,api-key:JDYiKyKfi4I4sOFWeJsI4S3Cb10=\r\n,0
AT+HTTPCONTENT=0,{"RPM":2\r\n},0

```

### Get a text file from an HTTPS server

```

## 4.5. TLS Command

### 4.5.1. AT+TLSCFG

Configure TLS parameters. Multiple <type> and <value> groups are supported. When the TLS parameters are in use such as during TLS configuration, ERROR will be returned for this AT command.

There are three <encode\_type> supported which are string, hex and base64. String encoding uses escape character \ to express un-printable characters and \o00 and \xhh are supported. For example, 0xD can be encoded as '\r', '\15' or '\x0D'. In hex encoding, the high four bits and the low four bits of character will be encoded as an ASCII character separately. For example, 0xD will be encoded as 0x00 and 0x0D.

AT+TLSCFG		Configure TLS Parameters
Set command		AT+TLSCFG=<tid>,<type>,<value>[,<type>,<value>[,<type>,<value>[...]]]

	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be created. Range 1 to 5.</li> <li>• &lt;type&gt; integer, the type of the parameter to be configured.</li> <li>• &lt;value&gt; interger, the value of the parameter to be configured.</li> </ul>
Reference	Note

parameter	type	Value			mandatory
		Value type	Value content	Default value	
Server name	1	string	Server name	None	Y
port	2	integer	Port number	443	N
Socket type	3	interger	0,TCP 1,UDP(Not Support currently)	0	N
Authentication mode	4	integer	0,none 1,optinal 2,required	2	N
Debug Level	5	integer	0,no log 1-4,the bigger the value is, the more log will be generated.	0	N
Server CA certificate	6	Sub parameters	<size>,<more>,<certificate>,[,<encode_method>] <size>: interger, the size of the buffer to store the whole certificate. It should be the total size of the whole encoded certificate using <encode_method> and could be bigger than that. <more> integer, 1 means more certificate content will be inputted. The server CA cerfition configuration always ends by +TLSCFG with <more> of 0. <certificate>: string, the total or partial content of the encoded certificate with quotation marks. <encode_method>: integer, it is the encoded method used for <certificate>. 801 is for string encoding and it is the default value which can be omitted, 802 is for hex encoding. And 803 is for base64 encoding.	Null	If authentication mode is 2, it's Y, otherwise, N
Client CA certificate	7	Sub parameters	Same as server CA certifcate	Null	If client authentication is needed, it's Y, otherwise, N
Client private key	8	Sub parameters	<size>,<more>,<private_key>,[,<encode_method>] <private_key>: the total or partial content od the encoded private key with quotation marks. Other parameters are the same as the ones for server CA certificate.	Null,	If client certificate is Y, it's Y, otherwise, it should not be configured.

### +TLSCFG Example

```
AT+TLSCFG=1,1,"182.150.27.42",2,50090,3,0,4,2,5,2      //set server ip, port
OK
AT+TLSCFG=1,6,1344,1," -----BEGIN CERTIFICATE-----\r\n

-----END CERTIFICATE-----" //set server's CA
```

OK

#### 4.5.2. AT+TLSCONN

Create a TLS connection . a PDN context should be activated by +EGACT before using +TLSCONN. The result of TLS connection is returned by +TLSCONN URC if OK is returned for TLSCONN AT command.

AT+TLSCONN		Create a TLS connection
Set command	AT+TLSCONN=<tid>,<cid>[,<time>]	
	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>	
Unsolicited result code	+TLSCONN: <tid>,<ret>	
Parameters	<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be created. It should be the same as the one in +TLSCFG.</li> <li>• &lt;cid&gt; integer, a specified particular PDP context ID returned by +EGACT</li> <li>• &lt;time&gt; integer, the parameter of receive timeout, specified in seconds, Default 60s.</li> <li>• &lt;ret&gt; interger, it tells the result of the TLS connection. If the connection succeeds, it is 1, otherwise, it is the error code.</li> </ul>	
Reference	Note	

#### <ret> error code

<ret>	Description
-1	TLS Parameters of tid has not configue
-21	Initialize RNG and the session data failed
-22	Loading cli_cert or Parse cli_cert private key failed
-23	Loading the CA root certificate failed
-240	Failed to get an IP address for the given hostname
-241	The connection to the given server/ port failed

-25	SSL/TLS structure set failed
-3	Handshake or Certificate verification failed
-4	Connection timed out

**+TLSCONN Example**

AT+TLSCONN=1,1,60	create a TLS connection
OK	
+TLSCONN: 1,1	return TLS connection result

**4.5.3. AT+TLSCLOSE**

Close a TLS connection indicated by <tid> and release all related resources. The result is returned by +TLSCLOSE URC if OK is returned for +TLSCLOSE AT command. If the TLS connection is not created before, ERROR will be returned.

AT+TLSCLOSE		Close a TLS connection
Set command		AT+TLSCLOSE=<tid>
		Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code		+TLSCLOSE: <tid>,<ret>
Parameters		<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be closed. It should be the same as the one in +TLS_CFG</li> <li>• &lt;ret&gt; integer, it tells the result of the TLS closure. If the closure succeeds, it is 1, If the closure failed, it is -1.</li> </ul>
Reference Other Proprietary commands		Note

**+TLSCLOSE Example**

AT+TLSCLOSE=1	Close the TLS connection
OK	
+TLSCLOSE: 1,1	Return the TLS connection closure result

**4.5.4. AT+TLSSEND**

Send data to the remote TLS server. The actual number of data sent is returned by +TLSSEND URC if OK is returned for +TLSSEND AT command. If the TLS connection is not created before, ERROR will be returned. -30848 will be returned if the TLS connection has been shut down by the peer gracefully.

Three <encode\_method>s are supported for data encoding which are the same as the ones used in +TLS\_CFG.

AT+TLSSEND		Send TLS Data
Set command		AT+TLSSEND=<tid>,<data_len>[,<encoded_method>]
		Response

	<ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+TLSSEND: <tid>,<ret>
Parameters	<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be created. It should be the same as the one in +TLSCFG</li> <li>• &lt;data_len&gt; integer, the length of the encoded &lt;data&gt;</li> <li>• &lt;data&gt; string, the encoded data to be sent</li> <li>• &lt;encoded_method&gt; the encode method used for &lt;data&gt;. 801 for string encoding and it is the default value which can be omitted. 802 is for hex encoding, and 803 is for base64 encoding.</li> <li>• &lt;ret&gt; interger, it tells result of the data sending. If it is greater than 0, it is the actual number of data sent, If it is equal to -1, it sent failed.</li> </ul>
Reference	Note

#### +TLSSEND Example

```
AT+TLSSEND=1,75,"GET https://182.150.27.42/test.html HTTP/1.1\r\nHost:
182.150.27.42\r\n\r\n"
                                         Send TLS data
OK
+TLEND: 1,69
                                         return TLS sending result
```

#### 4.5.5. AT+TLSRECV

Receive data from the remote TLS server. The actual number of data received is returned by +TLSRECV URC if OK is returned for +TLSRECV AT command. If the TLS connection is not created before, ERROR will be returned. -30848 will be returned if the TLS connection has been shut down by the peer gracefully.

Three <encode\_method>s are supported for data encoding which are the same as the ones used in +TLSCFG.

AT+TLSRECV	Receive TLS Data
Set command	AT+TLSRECV=<tid>,<max_len>[,<encoded_method>] Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+TLSRECV: <tid>,<ret>[,<data>][,<encode_method>]]
Parameters	<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be created. It should be the same as the one in +TLSCFG</li> <li>• &lt;max_len&gt; integer, the maximum number of plain data without encoding that could be received. It should be greater than the &lt;data_len&gt; of +TLSNMI.</li> <li>• &lt;data&gt; string, the data received with encoding.</li> <li>• &lt;encoded_method&gt; the encode method used for &lt;data&gt;.           <ul style="list-style-type: none"> <li>801 for string encoding and it is the default value which can be omitted.</li> <li>802 for hex encoding.</li> <li>803 for base64 encoding.</li> </ul> </li> </ul> <p>When it is in +TLSRECV AT command, it is the encode method required to be used</p>

	in +TLSRECV URC and it can be omitted if it is the default value . When it is in +TLSRECV URC, it is the encode method of <data> which should be aligned with the one in +TLSRECV AT command and it will be omitted if it is the default value. <ul style="list-style-type: none"> <li>• &lt;ret&gt; interger, if it is greater than , it is the length of data received after encoding, otherwise, it is the error code.</li> </ul>
Reference	Note

### <ret> error code

<ret>	Description
-1	TLSRECV Parameters of tid, max_len or encoded_method configure failed
-2	Receive failed
-3	-3 is returned when TLS connection is shut down gracefully by the peer

### +TLSRECV Example

```
+TLSNMI: 1,100

AT+TLSRECV=1,100,801    receive TLS data
OK
+ETLRECV: 1,106,"HTTP/1.1 200 OK\r\n..."    return the data received with
                                                encoding. <ret> of 106 is the length of
                                                encoded data which is greater than <max_len>
                                                of 100 which indicates the length of plain
                                                data.
```

### 4.5.6. AT+TLSRMOD

This command used to set TLS receive configuration.

AT+TLSRMOD Set TLS receive configuration	
	AT+TLSRMOD=?
Test Command	Response <ul style="list-style-type: none"> <li>• +TLSRMOD: (1-5),(0-1),(5-300),(801-803),(1-1400),(1-60000)</li> <li>• OK</li> <li>• ERROR</li> </ul>
Read command	AT+TLSRMOD? Response <ul style="list-style-type: none"> <li>• +TLSRMOD: 1,0,20,801</li> <li>• +TLSRMOD: 2,1,30,802,512,1000</li> <li>• OK</li> <li>• ERROR</li> </ul>
Set command	AT+TLSRMOD=<tid>,<rev_mode>[<time_out>,[<encoded_method>],[<auto_len>[,<atuo_interval>]]]
	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• ERROR</li> </ul>
Unsolicited result code	+TLSRECV: <tid>,<len>,<data>[,<encode_method>]

Parameters	<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be created. Range 1 to 5.</li> <li>• &lt;rev_mode&gt; integer, set the TLS data receiving mode. Range 0 to 1. Default 0.           <ul style="list-style-type: none"> <li>0 Manual receive mode, use AT+TLSRECV command to read TLS data manually.</li> <li>1 Automatic receive mode, when TLS data come, directly output to AT port.</li> </ul> </li> <li>• &lt;time_out&gt; integer, The maximum time for TLS reception waiting. Range 5 to 300s. Default 20.</li> <li>• &lt;encoded_method&gt; the encode method used for &lt;data&gt;. Default 801.           <ul style="list-style-type: none"> <li>801 for string encoding and it is the default value which can be omitted.</li> <li>802 for hex encoding.</li> <li>803 for base64 encoding.</li> </ul> </li> <li>• &lt;atuo_len&gt; Maximum packet length for automatic receive mode. Only valid with rev_mode=1. Range 1 to 1400. Default 512.</li> <li>• &lt;atuo_interval&gt; time interval of automatic receive mode. Only valid with rev_mode=1. Range 1 to 60000ms. Default 1000.</li> </ul>
Reference	Note

#### +TLSRMOD Example

```

AT+TLSRMOD=1,1,30,802
//set directly output mode and encode for
hex
//encoding.

OK

// Automatically output data at the AT port when receiving TLS data
+TLSRECV: 1,1024,"485454502F312E3120...",802

+TLSRECV: 1,158,"3E0D0A090...",802

```

#### 4.5.7. +TLSNMI

Indicated there is received some data from network.

+TLSNMI                    TLS data from network URC	
Unsolicited result code	+TLSNMI: <tid>,<data_len>
Parameters	<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be created. It should be the same as the one in +TLSCFG</li> <li>• &lt;data_len&gt; integer, length of data incoming.</li> </ul>
Reference	Note

#### 4.5.8. +TLSERR

Indicates that a connection error has occurred.

+TLSERR		TLS Client connection error indicator
Unsolicited result code	+TLSNMI: <tid>,<err_code>	
Parameters	<ul style="list-style-type: none"> <li>• &lt;tid&gt; integer, the identifier of the TLS connection to be created. It should be the same as the one in +TLSCFG</li> <li>• &lt;err_code&gt; integer, connection error code.</li> </ul>	
Reference	Note	

#### +TLSNMI connection error code

<err_code>	Description
-1	Common connection error
-2	No buffer space available
-3	I/O error or Invalid argument
-4	Transport endpoint is not connected
-5	Connection reset by peer
-6	Software caused connection abort
-7	No route to host
-8	The peer notified us that the connection is going to be closed or The connection indicated an EOF
-9	Verification of our peer failed
-10	A fatal alert message was received from our peer
-11	The receive operation of one message timed out more than 5 times
-12	The alert message of one massage received indicates a non-fatal error more than 5 times

### 4.6. OneNET Command

#### 4.6.1. AT+MIPLCREATE

This command create an instance of communication to CMIoT OneNET platform.

AT+MIPLCREATE		Create OneNET Instance
		AT+MIPLCREATE=<totalsize>,<config>,<index>,<currentsize>,<flag>
Set command		Response <ul style="list-style-type: none"> <li>• &lt;ref&gt;</li> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Parameters		<ul style="list-style-type: none"> <li>• &lt;totalsize&gt; integer, total size of configuration data of OneNET connection parameter.</li> <li>• &lt;config&gt; string, configuration data, refer to configuration structure.</li> <li>• &lt;index&gt; integer, index of each configuration data block, beginning from N-1 to 0.</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;currentsize&gt; integer, current size of this AT command.</li> <li>• &lt;flag&gt; integer, flag indicates if configuration stream is started or finished(first packet,middle packet,last packet), if set to 0,the last configuration package is sent, and the whole setting goes into effect. 1: first packet 2: middle packet 3: last packet</li> </ul>
Reference Other Proprietary commands	Note

#### +MIPLCREATE Example

```
AT+MIPLCREATE=56,130038F10003F2002A04001100000000000010196E62696F7462742E686
5636C6F7564732E636F6D3A35363833000131F300080000000000,0,56,0
OK
```

#### 4.6.2. AT+MIPLDEL

Delete a specified OneNET communication instance.

AT+MIPLDEL		Add LwM2M Object
Set command		AT+MIPLDEL=<ref> Response <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR: &lt;err&gt;</li> </ul>
Parameters		<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> </ul>
Reference		Note

#### 4.6.3. AT+MIPOPEN

Sending register request to OneNET with set command, and querying register state with read command.

AT+MIPOPEN		Send OneNET Register Request
Set command		AT+MIPOPEN=<ref>,<lifetime>[,<timeout>] Response <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Read command		AT+MIPOPEN? Response <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Unsolicited result code		+MIPLEVELT:<ref>,<evt_code>
Parameters		<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;lifetime&gt; the lifetime of this registration</li> <li>• &lt;timeout&gt; timeout of current login, if no response from server overtime, UE will response +MIPLEVENT, default 15s.</li> </ul>
Reference	<ul style="list-style-type: none"> <li>• Note</li> </ul>

#### +MIPOPEN Example

```
AT+MIPOPEN=0,3000,30
```

```
OK
```

```
+MIPLEVENT:0,4
```

```
+MIPLEVENT:0,6
```

```
AT+MIPOPEN?
```

```
OK
```

```
+MIPLEVENT:0,6
```

#### 4.6.4. AT+MIPLUPDATE

This command updates the register information, such as lifetime.

AT+MIPLUPDATE Send OneNET Register Request	
Set command	<pre>AT+MIPLUPDATE=&lt;ref&gt;,&lt;lifetime&gt;,&lt;withobjectflag&gt;</pre>
Response	<ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Unsolicited result code	<pre>+MIPLEVENT:&lt;ref&gt;,&lt;evt_code&gt;</pre>
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;lifetime&gt; update lifetime value in second of the client</li> <li>• &lt;withobjectflag&gt; 1:update object info at the same time 0:don't update object info</li> </ul>
Reference	Note

#### 4.6.5. AT+MIPLADDOBJ

Add lwm2m object to a specified OneNET instance. Concepts and definitions of Object, instance and resource, please refer to Lightweight Machine to Machine Technical Specification, ext-label Objects Produced by IPSO Alliance and oma-label Objects Produced by OMA.

<http://www.openmobilealliance.org/wp/OMNA/LwM2M/LwM2MRegistry.html>

AT+MIPLADDOBJ Add LWM2M Object	
	<pre>AT+MIPLADDOBJ=&lt;ref&gt;,&lt;objectid&gt;,&lt;instancecount&gt;,&lt;instancebitmap&gt;,&lt;attributecount&gt;,&lt;actioncount&gt;</pre>
Set command	<ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>

Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;objectid&gt; object identity.(refer to documentation above)</li> <li>• &lt;instancecount&gt; the number of new instance identity</li> <li>• &lt;instancebitmap&gt; instance bitmap, string format, each character is represented as an instance, of which 1 is available, and 0 is unavailable. For example, the currently added object has 5 instances, of which 1, 3 are available, and the instance bitmap is 00101.</li> <li>• &lt;attributecount&gt; readable number of resources</li> <li>• &lt;actioncount&gt; executable number of resources</li> </ul>
References	Note

#### 4.6.6. AT+MIPLDELOBJ

Delete an object from a specified OneNET instance.

<b>AT+MIPLDELOBJ</b> Delete LWM2M Object	
	AT+MIPLDELOBJ=<ref>,<objectid>
Set command	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;objectid&gt; object identity.</li> </ul>
Reference	Note

#### 4.6.7. AT+MIPLCLOSE

Sending unregister request to OneNET according to specified reference ID.

<b>AT+MIPLCLOSE</b> Send OneNET Unregister Request	
	AT+MIPLCLOSE=<ref>
Set command	Response <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> </ul>
Reference	Note

#### 4.6.8. AT+MIPLNOTIFY

Notify OneNET that specified values changed.

<b>AT+MIPLNOTIFY</b> Notify Value Changes	
Set command	+MIPLNOTIFY=<ref>,<msgid>,<objectid>,<instanceid>,<resourceid>,<valuetype>,<len>,<value>,<index>,<flag>[,<ackid>]

	<p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>										
Unsolicited result code	+MIPLEVELENT:<ref>,<evt_code>,<ackid>										
	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;msgid&gt; message id, It should be the msgid when the resource is observed</li> <li>• &lt;objectid&gt; object identity</li> <li>• &lt;instanceid&gt; instance identity</li> <li>• &lt;resourceid&gt; resource identity</li> <li>• &lt;valuetype&gt; data type</li> </ul> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td>1</td><td>2</td><td>3</td><td>4</td><td>5</td></tr> <tr> <td>string</td><td>opaque</td><td>integer</td><td>float</td><td>bool</td></tr> </table>	1	2	3	4	5	string	opaque	integer	float	bool
1	2	3	4	5							
string	opaque	integer	float	bool							
Parameters	<ul style="list-style-type: none"> <li>• &lt;len&gt; The length of the value</li> <li>• &lt;value&gt; values of specified value type</li> <li>• &lt;flag&gt; Message identification.1:The first message; 2:Middle message; 0: The last message.</li> <li>• &lt;index&gt; Instruction sequence number. If a Notify operation requires some messages combination to be a complete instruction, the index is numbered from N-1 to 0, and the end of the Notify instruction when the index number is 0.</li> <li>• &lt;ackid&gt; If &lt;ackid&gt; is set, OneNET server will response ACK message to UE, if UE received ack-messages, output following message:+MIPLEVELENT. If &lt;ackid&gt; omitted, no ACK will response, set to 0 causes errors.</li> </ul>										
References	Note										

#### +MIPLNOTIFY Example

```
AT+MIPLNOTIFY=0,1477,3202,0,5600,4,3,"1.2",0,0,35
OK
+MIPLEVELENT:0,26,35
AT+MIPLNOTIFY=0,1478,3202,2,5600,4,5,"-0.08",2,1
OK
AT+MIPLNOTIFY=0,1478,3202,2,5601,4,3,"-0.08",1,2
OK
AT+MIPLNOTIFY=0,1478,3202,2,5602,4,5,"-0.08",0,0
OK
```

#### 4.6.9. AT+MIPLREADRSP

The read command set specified resource values, and when flag set to 1, upload these updating values to OneNET. This should be operated when +MIPLREAD URC is received as reply of remote read command.

AT+MIPLREADRSP	Upload Read Messages
Set command	<p>AT+MIPLREADRSP=&lt;ref&gt;,&lt;msgid&gt;,&lt;result&gt;[,&lt;objid&gt;,&lt;insid&gt;,&lt;resid&gt;,&lt;valuetype&gt;,&lt;len&gt;,&lt;value&gt;,&lt;index&gt;,&lt;flag&gt;]</p> <p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> </ul>

	<ul style="list-style-type: none"> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>												
Unsolicited result code	<p>+MIPLREAD:&lt;ref&gt;,&lt;msgid&gt;,&lt;objectid&gt;,&lt;instanceid&gt;,&lt;resourceid&gt;[,&lt;count&gt;]</p> <ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;msgid&gt; message identity from +MIPLREAD.</li> <li>• &lt;result&gt; the result of the read operation; the code can be returned as</li> </ul>												
	<table border="1"> <tr><td>1</td><td>2.05 Content OK</td></tr> <tr><td>11</td><td>4.00 Bad Request</td></tr> <tr><td>12</td><td>4.01 Unauthorized</td></tr> <tr><td>13</td><td>4.04 Not Found</td></tr> <tr><td>14</td><td>4.05 Method Not Allowed</td></tr> <tr><td>15</td><td>4.06 Not Acceptable</td></tr> </table>	1	2.05 Content OK	11	4.00 Bad Request	12	4.01 Unauthorized	13	4.04 Not Found	14	4.05 Method Not Allowed	15	4.06 Not Acceptable
1	2.05 Content OK												
11	4.00 Bad Request												
12	4.01 Unauthorized												
13	4.04 Not Found												
14	4.05 Method Not Allowed												
15	4.06 Not Acceptable												
Parameters	<ul style="list-style-type: none"> <li>• &lt;objectid&gt; object identity</li> <li>• &lt;instanceid&gt; instance identity</li> <li>• &lt;resourceid&gt; resource identity</li> <li>• &lt;valuetype&gt; data type of value, refer to +MIPLNOTIFY command</li> <li>• &lt;len&gt; The length of the value</li> <li>• &lt;value&gt; values of specified value type</li> <li>• &lt;flag&gt; Message identification. refer to +MIPLNOTIFY command.</li> <li>• &lt;count&gt; The number of resources that are currently required to be read.when &lt;resourceid&gt; is -1,the command have &lt;count&gt; parameter.</li> </ul>												
Reference	Note												

#### +MIPLREADRSP Example

```
+MIPLREAD:0,289,3200,0,5750
AT+MIPLREADRSP=0,289,1,3202,0,5750,1,5,"-0.08",0,0
OK
```

#### 4.6.10. AT+MIPLWRITERSP

This command used as reply of remote write command after +MIPLWRITE URC received, to feedback the results of updating specified resource value.

AT+MIPLWRITERSP	Upload Write Result		
Set command	<p>AT+MIPLWRITERSP=&lt;ref&gt;,&lt;msgid&gt;,&lt;result&gt;</p> <ul style="list-style-type: none"> <li>• Response</li> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>		
Unsolicited result code	<p>+MIPLWRITE:&lt;ref&gt;,&lt;msgid&gt;,&lt;objectid&gt;,&lt;instanceid&gt;,&lt;resourceid&gt;,&lt;valuetype&gt;,&lt;len&gt;,&lt;value&gt;,&lt;flag&gt;</p>		
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;msgid&gt; message identity in +MIPLWRIT.</li> <li>• &lt;result&gt; result of writing specified resource; the code can be returned as</li> </ul> <table border="1"> <tr><td>2</td><td>2.04 Changed OK</td></tr> </table>	2	2.04 Changed OK
2	2.04 Changed OK		

			11	4.00 Bad Request
			12	4.01 Unauthorized
			13	4.04 Not Found
			14	4.05 Method Not Allowed
			15	4.06 Not Acceptable

- <objectid> object identity
- <instanceid> instance identity
- <resourceid> resource identity
- <valuetype> data type of value, refer to +MIPLNOTIFY command
- <len> The length of the value
- <value> values of specified value type
- <flag> Message identification. refer to +MIPLNOTIFY command

| Reference | Note |  |  |  |

#### +MIPLWRITERSP Example

```
+MIPLWRITE:0,321,3200,0,5750,1,3,123,0
AT+MIPLWRITERSP=0,321,2
OK
```

#### 4.6.11. AT+MIPLEXECUTERSP

This command is used as reply of remote execute command after +MIPLEXECUTE URC received to feedback the results of user-defined operation.

AT+MIPLWRITERSP      Upload Write Result	
Set command	AT+MIPLEXECUTERSP=<ref>,<msgid>,<result> Response <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Unsolicited result code	+MIPLEXECUTE:<ref>,<msgid>,<objectid>,<instanceid>,<resourceid>[,<len>,<value>,<flag>]
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;msgid&gt; message identity in +MIPLWRIT.</li> <li>• &lt;result&gt; result of writing specified resource; refer to +MIPLWRITERSP</li> <li>• &lt;objectid&gt; object identity</li> <li>• &lt;instanceid&gt; instance identity</li> <li>• &lt;resourceid&gt; resource identity</li> <li>• &lt;len&gt; The length of the value</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;value&gt; values of specified value type</li> <li>• &lt;flag&gt; Message identification. refer to +MIPLNOTIFY command</li> </ul>
Reference	Note

#### 4.6.12. AT+MIPLDISCOVERRSP

This command is used as reply of remote execute command after +MIPLEXECUTE URC received to feedback the results of user-defined operation.

<b>AT+MIPLDISCOVERRSP Upload Discover Result</b>	
Set command	<p>+MIPLXEDISCOVERRSP=&lt;ref&gt;,&lt;msgid&gt;,&lt;result&gt;,&lt;length&gt;,&lt;value&gt;</p> <p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Unsolicited result code	+MIPLPARAMETER:<ref>,<msgid>,<objectid>
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;msgid&gt; message identity in +MIPLWRIT.</li> <li>• &lt;result&gt; result of writing specified resource; refer to +MIPLREADRSP</li> <li>• &lt;objectid&gt; object identity</li> <li>• &lt;len&gt; The length of the value</li> <li>• &lt;value&gt; The object attribute requires the use of a semicolon between multiple attributes to separate "1101;1102;1103".</li> </ul>
Reference	Note

#### +MIPLDISCOVERRSP Example

```
+MIPLDISCOVER=0,879,1,3200
AT+MIPLDISCOVERRSP=0,879,3200,9,"5600;5750"
OK
```

#### 4.6.13. AT+MIPLOBERVERSP

This command is used as reply of remote execute command after +MIPLOBERVE URC received to feedback the results of user-defined operation.

<b>AT+MIPLOBERVERSP Upload Discover Result</b>	
Set command	<p>AT+MIPLOBERVERSP=&lt;ref&gt;,&lt;msgid&gt;,&lt;result&gt;</p> <p>Response</p> <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Unsolicited result code	+MIPLOBERVE:<ref>,<msgid>,<oper>,<objectid>,<instanceid>,<resourceid>
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;msgid&gt; message identity in +MIPLWRIT.</li> </ul>

	<ul style="list-style-type: none"> <li>• &lt;result&gt; result of writing specified resource; refer to +MIPLREADRSP</li> <li>• &lt;oper&gt; 1:observe added; 0: observe canceled</li> <li>• &lt;objectid&gt; object identity</li> <li>• &lt;instanceid&gt; instance identity</li> <li>• &lt;resourceid&gt; resource identity</li> </ul>
Reference	Note

#### +MIPLOBSERVERSP Example

```
+MIPLOBSERVE:0,2657,1,3200,0,-1
AT+MIPLOBSERVERSP=0,2657,1
OK
```

#### 4.6.14. AT+MIPLPARAMETERRSP

This command is used as reply of remote execute command after MIPLPARAMETER URC received to feedback the results of user-defined operation.

AT+MIPLPARAMETERRSP Upload Discover Result	
Set command	<b>AT+MIPLPARAMETERRSP=&lt;ref&gt;,&lt;msgid&gt;,&lt;result&gt;</b> <b>Response</b> <ul style="list-style-type: none"> <li>• OK</li> <li>• +CIS ERROR:&lt;err&gt;</li> </ul>
Unsolicited result code	+MIPLPARAMETER:<ref>,<msgid>,<objectid>,<instanceid>,<resourceid>,<len>,<parameter>
Parameters	<ul style="list-style-type: none"> <li>• &lt;ref&gt; reference ID of OneNET communication instance.</li> <li>• &lt;msgid&gt; message identity in +MIPLWRIT.</li> <li>• &lt;result&gt; result of writing specified resource; refer to +MIPLWRITERSP</li> <li>• &lt;objectid&gt; object identity</li> <li>• &lt;instanceid&gt; instance identity</li> <li>• &lt;resourceid&gt; resource identity</li> <li>• &lt;len&gt; The length of the parameter</li> <li>• &lt;parameter&gt; string type, like: pmin=xxx;pmax=xxx;gt=xxx;lt=xxx;stp=xxx</li> </ul>
Reference	Note

#### 4.6.15. AT+MIPLVER

Get version of OneNET protocol.

AT+MIPLVER Upload Discover Result	
Read command	<b>AT+MIPLVER?</b> <b>Response</b> <ul style="list-style-type: none"> <li>• +MIPLVER:&lt;version&gt;</li> <li>• OK</li> </ul>

## 5. Appendix

### 5.1. Extended DRX parameters(3GPP TS 24.008)

The purpose of the Extended DRX parameters information element is to indicate that the MS wants to use eDRX and for the network to indicate the Paging Time Window length value and the extended DRX cycle value to be used for eDRX.

The Extended DRX parameters is a type 4 information element with a length of 3 octets.

The Extended DRX parameters information element is coded as shown in figure 10.5.5.32/3GPP TS 24.008 and table 10.5.5.32/3GPP TS 24.008.

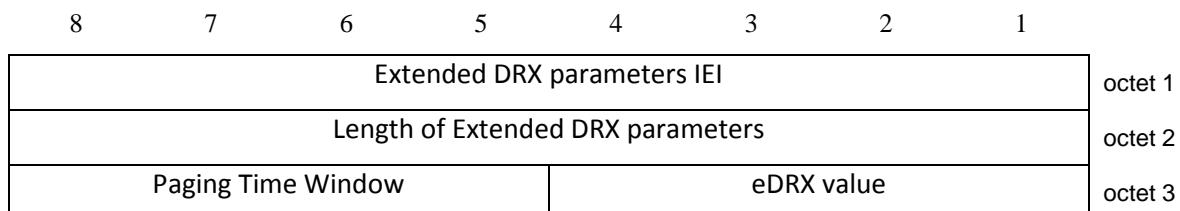

Figure 10.5.5.32/3GPP TS 24.008: Extended DRX parameters information element

Table 10.5.5.32/3GPP TS 24.008: Extended DRX parameters information element

Paging Time Window (PTW), octet 3 (bit 8 to 5)

The field contains a PTW value. The PTW value can be applied for Iu mode, WB-S1 mode and NB-S1 mode as specified below.

Iu mode

The field contains the PTW value in seconds for Iu mode. The PTW value is used as specified in 3GPP TS 23.682 [133a]. The PTW value is derived as follows:

BIT

8	7	6	5	Paging Time Window length
0	0	0	0	0 seconds (PTW not used)
0	0	0	1	1 second
0	0	1	0	2 seconds
0	0	1	1	3 seconds
0	1	0	0	4 seconds
0	1	0	1	5 seconds
0	1	1	0	6 seconds
0	1	1	1	7 seconds
1	0	0	0	8 seconds
1	0	0	1	9 seconds
1	0	1	0	10 seconds
1	0	1	1	12 seconds
1	1	0	0	14 seconds

1	1	0	1	16 seconds
1	1	1	0	18 seconds
1	1	1	1	20 seconds

**WB-S1 mode**

The field contains the PTW value in seconds for WB-S1 mode. The PTW value is used as specified in 3GPP TS 23.682 [133a]. The PTW value is derived as follows:

**BIT**

8	7	6	5	Paging Time Window length
0	0	0	0	1,28 seconds
0	0	0	1	2,56 seconds
0	0	1	0	3,84 seconds
0	0	1	1	5,12 seconds
0	1	0	0	6,4 seconds
0	1	0	1	7,68 seconds
0	1	1	0	8,96 seconds
0	1	1	1	10,24 seconds
1	0	0	0	11,52 seconds
1	0	0	1	12,8 seconds
1	0	1	0	14,08 seconds
1	0	1	1	15,36 seconds
1	1	0	0	16,64 seconds
1	1	0	1	17,92 seconds
1	1	1	0	19,20 seconds
1	1	1	1	20,48 seconds

**NB-S1 mode**

The field contains the PTW value in seconds for NB-S1 mode. The PTW value is used as specified in 3GPP TS 23.682 [133a]. The PTW value is derived as follows:

**BIT**

8	7	6	5	Paging Time Window length
0	0	0	0	2,56 seconds
0	0	0	1	5,12 seconds
0	0	1	0	7,68 seconds
0	0	1	1	10,24 seconds
0	1	0	0	12,8 seconds
0	1	0	1	15,36 seconds
0	1	1	0	17,92 seconds
0	1	1	1	20,48 seconds
1	0	0	0	23,04 seconds
1	0	0	1	25,6 seconds
1	0	1	0	28,16 seconds
1	0	1	1	30,72 seconds
1	1	0	0	33,28 seconds
1	1	0	1	35,84 seconds
1	1	1	0	38,4 seconds
1	1	1	1	40,96 seconds

**eDRX value, octet 3 (bit 4 to 1)**

The octet contains the eDRX value field. The parameter values are applied for A/Gb mode, Iu mode or S1 mode according to the tables below.

**A/Gb mode**

The field contains the eDRX value for A/Gb mode. The GERAN eDRX cycle length duration and Number of 51-MF per GERAN eDRX cycle values are derived from the eDRX value as follows:

**BIT**

4	3	2	1	GERAN eDRX cycle length duration	Number of 51-MF per GERAN eDRX cycle
0	0	0	0	~1,88 seconds (NOTE 1, NOTE 2)	8
0	0	0	1	~3,76 seconds (NOTE 1, NOTE 2)	16
0	0	1	0	~7,53 seconds (NOTE 1, NOTE 2)	32
0	0	1	1	12,24 seconds (NOTE 2)	52
0	1	0	0	24,48 seconds (NOTE 2)	104
0	1	0	1	48,96 seconds (NOTE 2)	208
0	1	1	0	97,92 seconds (NOTE 2)	416
0	1	1	1	195,84 seconds (NOTE 2)	832
1	0	0	0	391,68 seconds (NOTE 2)	1664
1	0	0	1	783,36 seconds (NOTE 2)	3328
1	0	1	0	1566,72 seconds (NOTE 2)	6656
1	0	1	1	3133,44 seconds (NOTE 2)	13312
1	1	0	0	GERAN eDRX cycle length duration	Number of 51-MF per GERAN eDRX cycle
1	1	0	1	~1,88 seconds (NOTE 1, NOTE 2)	8
1	1	1	0	~3,76 seconds (NOTE 1, NOTE 2)	16
1	1	1	1	~7,53 seconds (NOTE 1, NOTE 2)	32

All other values shall be interpreted as 0000 by this version of the protocol.

NOTE 1: The listed values are rounded.

NOTE 2: The value in seconds can be calculated with the formula ((3,06 / 13) \* (Number of 51-MF)). See 3GPP TS 45.001 [157], subclause 5.1.

**Iu mode**

The field contains the eDRX value for Iu mode. The UTRAN eDRX cycle length duration value is derived from the eDRX value as follows:

**BIT**

4	3	2	1	UTRAN eDRX cycle length duration
0	0	0	0	10,24 seconds
0	0	0	1	20,48 seconds
0	0	1	0	40,96 seconds
0	0	1	1	81,92 seconds
0	1	0	0	163,84 seconds
0	1	0	1	327,68 seconds
0	1	1	0	655,36 seconds
0	1	1	1	1310,72 seconds
1	0	0	0	1966,08 seconds
1	0	0	1	2621,44 seconds
1	0	1	0	UTRAN eDRX cycle length duration
1	0	1	1	10,24 seconds

1	1	0	0	20,48 seconds
1	1	0	1	40,96 seconds
1	1	1	0	81,92 seconds
1	1	1	1	163,84 seconds

All other values shall be interpreted as 0000 by this version of the protocol.

#### S1 mode

The field contains the eDRX value for S1 mode. The E-UTRAN eDRX cycle length duration value and the eDRX cycle parameter ' $T_{eDRX}$ ' as defined in 3GPP TS 36.304 [121] are derived from the eDRX value as follows:

#### BIT

4	3	2	1	E-UTRAN eDRX cycle length duration	eDRX cycle parameter ' $T_{eDRX}$ '
0	0	0	0	5,12 seconds (NOTE 4)	NOTE 3
0	0	0	1	10,24 seconds (NOTE 4)	$2^0$
0	0	1	0	20,48 seconds	$2^1$
0	0	1	1	40,96 seconds	$2^2$
0	1	0	0	61,44 seconds (NOTE 5)	6
0	1	0	1	81,92 seconds	$2^3$
0	1	1	0	102,4 seconds (NOTE 5)	10
0	1	1	1	122,88 seconds (NOTE 5)	12
1	0	0	0	143,36 seconds (NOTE 5)	14
1	0	0	1	163,84 seconds	$2^4$
1	0	1	0	327,68 seconds	$2^5$
1	0	1	1	655,36 seconds	$2^6$
1	1	0	0	1310,72 seconds	$2^7$
1	1	0	1	2621,44 seconds	$2^8$
1	1	1	0	5242,88 seconds (NOTE 6)	$2^9$
1	1	1	1	10485,76 seconds (NOTE 6)	$2^{10}$

All other values shall be interpreted as 0000 by this version of the protocol.

NOTE 3: For E-UTRAN eDRX cycle length duration of 5,12 seconds the eDRX cycle parameter ' $T_{eDRX}$ ' is not used as a different algorithm compared to the other values is applied. See 3GPP TS 36.304 [121] for details.

NOTE 4: The value is applicable only in WB-S1 mode. If received in NB-S1 mode it is interpreted as if the Extended DRX parameters IE were not included in the message by this version of the protocol.

NOTE 5: The value is applicable only in WB-S1 mode. If received in NB-S1 mode it is interpreted as 0010 by this version of the protocol.

NOTE 6: The value is applicable only in NB-S1 mode. If received in WB-S1 mode it is interpreted as 1101 by this version of the protocol.

## 5.2. GPRS Timer (3GPP TS 24.008)

### 5.2.1 GPRS Timer

The purpose of the *GPRS timer* information element is to specify GPRS specific timer values, e.g. for the READY timer.

The *GPRS timer* is a type 3 information element with 2 octets length.

The *GPRS timer* information element is coded as shown in figure 10.5.146/3GPP TS 24.008 and table 10.5.172/3GPP TS 24.008.

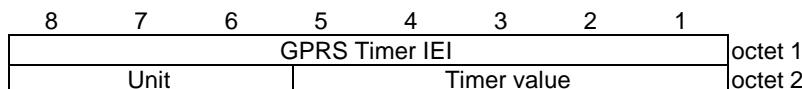

Figure 10.5.146/3GPP TS 24.008: GPRS Timer information element

Table 10.5.172/3GPP TS 24.008: GPRS Timer information element

Timer value (octet 2)
Bits 5 to 1 represent the binary coded timer value.
Bits 6 to 8 defines the timer value unit for the GPRS timer as follows:
Bits
<b>8 7 6</b>
0 0 0 value is incremented in multiples of 2 seconds
0 0 1 value is incremented in multiples of 1 minute
0 1 0 value is incremented in multiples of decihours
1 1 1 value indicates that the timer is deactivated.
Other values shall be interpreted as multiples of 1 minute in this version of the protocol.

### 5.2.2 GPRS Timer 2

The purpose of the *GPRS timer 2* information element is to specify GPRS specific timer values, e.g. for the timer T3302 or timer T3319.

The *GPRS timer 2* is a type 4 information element with 3 octets length.

The *GPRS timer 2* information element is coded as shown in figure 10.5.147/3GPP TS 24.008 and table 10.5.163/3GPP TS 24.008.

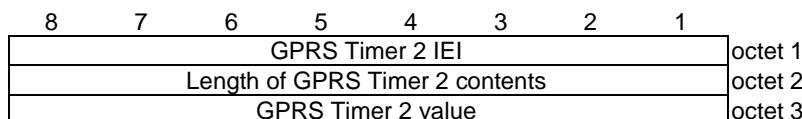

Figure 10.5.147/3GPP TS 24.008: GPRS Timer 2 information element

Table 10.5.163/3GPP TS 24.008: GPRS Timer 2 information element

GPRS Timer 2 value is coded as octet 2 of the <i>GPRS timer</i> information element.
--

### 5.2.3 GPRS Timer 3

The purpose of the *GPRS timer 3* information element is to specify GPRS specific timer values, e.g. for the timer T3396.

The *GPRS timer 3* is a type 4 information element with 3 octets length.

The *GPRS timer 3* information element is coded as shown in figure 10.5.147a/3GPP TS 24.008 and table 10.5.163a/3GPP TS 24.008.

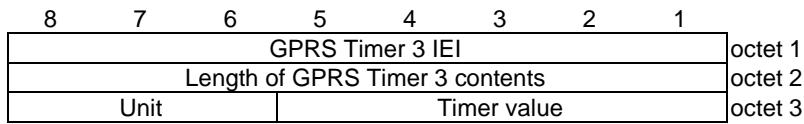

Figure 10.5.147a/3GPP TS 24.008: GPRS Timer 3 information element

Table 10.5.163a/3GPP TS 24.008: GPRS Timer 3 information element

GPRS Timer 3 value (octet 3)	
Bits 5 to 1	represent the binary coded timer value.
Bits 6 to 8	defines the timer value unit for the GPRS timer as follows:
Bits	
<b>8 7 6</b>	
0 0 0	value is incremented in multiples of 10 minutes
0 0 1	value is incremented in multiples of 1 hour
0 1 0	value is incremented in multiples of 10 hours
0 1 1	value is incremented in multiples of 2 seconds
1 0 0	value is incremented in multiples of 30 seconds
1 0 1	value is incremented in multiples of 1 minute
1 1 0	value is incremented in multiples of 320 hours (NOTE)
1 1 1	value indicates that the timer is deactivated.
NOTE:	This timer value unit is only applicable to the T3312 extended value IE and T3412 extended value IE (see 3GPP TS 24.301 [120]). If it is received in an integrity protected message, value shall be interpreted as multiples of 320 hours. Otherwise value shall be interpreted as multiples of 1 hour.
