1 Introduction

1.1 Purpose of the document

Based on module AT command manual, this document will introduce FTP(S) application process.

Developers could understand and develop application quickly and efficiently based on this document.

1.2 Related documents

[2] SIM7070_SIM7080_SIM7090 Series_SSL_Application Note

1.3 Conventions and abbreviations

In this document, the GSM engines are referred to as following term:
- ME (Mobile Equipment);
- MS (Mobile Station);
- TA (Terminal Adapter);
- DCE (Data Communication Equipment) or facsimile DCE (FAX modem, FAX board);

In application, controlling device controls the GSM engine by sending AT Command via its serial interface. The controlling device at the other end of the serial line is referred to as following term:
- TE (Terminal Equipment);
- DTE (Data Terminal Equipment) or plainly "the application" which is running on an embedded system;
2 FTP Introduction

File Transfer Protocol (FTP) is a TCP-based protocol that uses a client/server model. Through the FTP protocol, users can upload or download files in the FTP server. Although there are many sites downloaded through the HTTP protocol, the FTP protocol can control the number of users and the distribution of broadband, and upload and download files quickly and easily. Therefore, FTP has become the preferred server for file uploading and downloading on the network. At the same time, it is also an application that allows users to connect their computers to all servers running FTP protocols around the world, accessing a large number of programs and information on the server. The function of the FTP service is to realize the off-site transmission of complete files.

2.1 Features

- FTP uses two parallel connections: control connections and data connections. The control connection transfers control commands between the two hosts, such as user identity, password, directory change command, and so on. Data connections are only used to transfer data.

- During a session, the FTP server must maintain the user state, that is, the control connection with a certain user cannot be disconnected. In addition, when the user is active in the directory tree, the server must track the user's current directory, so that FTP limits the number of concurrent users.

- FTP support files are transmitted in any direction. When a user establishes a connection with a remote computer, the user can obtain a remote file or transfer a local file to a remote machine.

2.2 Working Mode

FTP is a TCP-only service and does not support UDP. The difference is that FTP uses 2 ports, a data port and a command port (also called a control port). Usually these two ports are 21 (command port) and 20 (data port). But the way FTP works, the data port is not always 20. This is the biggest difference between active and passive FTP. There are two main modes of operation:
2.2.1 Active FTP Mode

Active FTP is the port mode. The client connects to the command port of the FTP server from an arbitrary non-privileged port N (N>1024), which is also the 21 port. The client then listens on port N+1 and sends the FTP command “port N+1” to the FTP server. The server then connects to its own data port (N+1) from its own data port (20).

For the firewall in front of the FTP server, the following communication must be allowed to support active mode FTP:

- Any port larger than 1024 to port 21 of the FTP server. (client-initiated connection)
- Port 21 of the FTP server to a port larger than 1024. (The server responds to the client's control port)
- The port of the FTP server is 20 ports to more than 1024 ports. (The server side initializes the data connection to the client's data port)
- More than 1024 ports to port 20 of the FTP server (the client sends an ACK response to the server's data port)

2.2.2 Passive FTP Mode

In order to solve the problem of the server initiating the connection to the client, a different FTP connection method was developed. This is called passive mode, or PASV, which is enabled when the client notifies the server that it is in passive mode.

In passive mode FTP, both the command connection and the data connection are initiated by the client, so that the problem that the incoming connection from the server to the client's data port is filtered by the firewall can be solved.

When an FTP connection is opened, the client opens two arbitrary non-privileged local ports (N > 1024 and N+1). The first port connects to port 21 of the server, but unlike active mode FTP, the client does not submit a PORT command and allows the server to connect back and forth to its data port, instead submitting a PASV command. The result of this is that the server will open an arbitrary non-privileged port (P > 1024) and send a PORT P command to the client. The client then initiates a connection from the local port N+1 to the port P of the server for transmitting data.

For server-side firewalls, the following communication must be allowed to support passive FTP:

- From any port larger than 1024 to port 21 of the server (client-initiated connection)
- The server's 21 port to any port greater than 1024 (the server responds to the client's control port
From any port greater than 1024 to the server greater than 1024 ports (client initialization data connection to any port specified by the server)

The server is larger than 1024 ports to remote ports greater than 1024 (the server sends ACK response and data to the client's data port)

2.2.3 FTP Extend mode

Compared with the FTP normal mode, the extended mode is characterized by: one can download and upload a large amount of data, and the other is that it can be directly downloaded into the file system.

AT+FTPEXTGET command is to download in extended mode.
- Set the mode parameter to 1, use extended mode to download files from the FTP server to the local cache, and after successful download, return +FTPEXTGET: 1,0 URC report. After successful download, set the mode parameter to 3 to output the file downloaded to the local cache to the serial port.
- Set the mode parameter to 0 to clear the download cache.
- Set the mode parameter to 2, use the extended mode to download the file to the local file system, and use the dir parameter to set the directory where the downloaded file is stored. After the download is successful, the file will be stored in the corresponding selected directory. The download fails or there is no space left in the file system during the download process, the file being downloaded will be deleted automatically.

AT+FTPEXTPUT command is to upload in extended mode.
- Set the mode parameter to 2 and input data from the serial port to the local cache.
- Set the mode parameter to 1, and upload the local cache data to the FTP server.
- Set the mode parameter to 0 to clear the upload cache.

2.2.4 FTP SSL mode

There are two modes of FTP SSL:

Explicit SSL: After establishing a connection with the ftp server, the ftp client must explicitly tell the server to initialize the corresponding secure connection with a command ("AUTH SSL" or "AUTH TLS"). At this time, the default ftp port 21 is used.

Implicit SSL: When the FTP client connects to the server, the server automatically establishes a secure connection. At this time, the client defaults to port 990 to securely connect to the server, and the server port can be set.
SIM7070_SIM7080_SIM7090 Series modules support the active mode and passive mode of the FTP protocol. Support download, upload, create directory, delete directory, get directory or file size, get directory details, delete files and other functions.

For detail information, please refer to “SIM7070_SIM7080_SIM7090 Series_AT Command Manual”.
4 Bearer Configuration

Usually module will register PS service automatically.

4.1 PDN Auto-activation

//Example of PDN Auto-activation.

AT+CPIN?
+CPIN:READY
OK
AT+CSQ
+CSQ: 20,0
OK
AT+CGATT?
+CGATT: 1
OK
AT+COPS?
+COPS: 0,0,"CHN-CT",9
OK
AT+CGNAPN
+CGNAPN: 1,"ctnb"
OK
AT+CNCFG=0,1,"ctnb"
OK
AT+CNACT=0,1
OK
4.2 APN Manual Configuration

If not attached automatically, could configure correct APN setting.

//Example of APN Manual configuration.

AT+CFUN=0                      //Disable RF
+CPIN: NOT READY
OK
AT+CGDCONT=1,"IP","ctnb"      //Set the APN manually. Some operators need to set APN first when registering the network.
OK
AT+CFUN=1                      //Enable RF
OK
+CPIN: READY
AT+CGATT?                      //Check PS service. 1 indicates PS has attached.
+CGATT: 1
OK
AT+CGNAPN                      //Query the APN delivered by the network after the CAT-M or NB-IOT network is successfully registered.
+CGNAPN: 1,"ctnb"             //"ctnb" is APN delivered by the CAT-M or NB-IOT network. APN is empty under the GSM network.
OK
AT+CNCFG=0,1,"ctnb"           //Before activation please use AT+CNCFG to set APN\user name\password if needed.
OK
AT+CNACT=0,1                  //Activate network, Activate 0th PDP.
OK
+APP PDP: 0,ACTIVE
AT+CNACT?
//Get local IP
+CNACT: 0,1,"10.94.36.44"
+CNACT: 1,0,"0.0.0.0"
+CNACT: 2,0,"0.0.0.0"
+CNACT: 3,0,"0.0.0.0"
OK
5 FTP(S) Examples

5.1 FTP Function

5.1.1 FTP GET Method

Download data from FTP server.

//Example of FTP GET Method

```
AT+FTPCID=0
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/"
OK
AT+FTPGET=1
OK

+FTPGET: 1,1
AT+FTPGET=2,1024

+FTPGET: 2,50
01234567890123456789012345678901234567890123456789012345678901234567890123456789012345678
OK
AT+FTPGET=2,1024
+FTPGET: 2,0

//Set parameters for FTP session.

//Download file.

//Request to read 1024 bytes.

//Only 50 bytes are now available.

//Request to read 1024 bytes again.

//No byte is now available, but it is not the end of session
```
### 5.1.2 FTP PUT Method

Upload data to FTP server.

**//Example of FTP PUT Method**

```plaintext
AT+FPCID=0
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FPU="simcomtest"
OK
AT+FPPW="simcomtest"
OK
AT+FPUTNAME="simftp.txt"
OK
AT+FPUTPATH="/"
OK
AT+FPUT=1
OK

+FTPPUT: 1,1,1360
//1360 is the max length of data which can be sent at a time. It depends on the network status.

AT+FPUT=2,100
//Client requests to send 100 bytes.
+FTPPUT: 2,100
//Response indicates that user must input 100 bytes for transferring now.
```

//If the module receives data but user do not input "AT+FGET:2,<reqlength>" to read data, "+FTPGE T:1,1" will be shown again in a certain time

AT+FGET=2,1024
+FTPGET: 2,1024
01234567890123456789012345678901234567890123456789012345678
OK
+FTPGET:1,0
//Data transfer finished. The connection to the FTP server is closed.
During FTP session, different failure may occur because of bad network environment or other reasons. Some common failure includes timeout failure and wrong password failure.

### 5.1.3 FTP Time out

Time out occurs during FTP session because of different reasons.

//Example of FTP Time out

```plaintext
AT+FTPGET=1  //Download file.
OK            //If the status of the network is poor, it may be time out.
+FTPGET: 1,64 //The connection to the FTP server is closed.
AT+FTPGET=1  //Download file.
OK
+FTPGET: 1,1  //Data are available.
+FTPGET: 1,1  //If customer does not use "AT+FTPGET:2,<reqlength>" to read data, "+FTPGET:1,1" will be shown again in a certain time.
--------
+FTPGET: 1,1  //If the user does not read data for a long time, the //session will time out. The connection to the FTP server is closed.
+FTPGET: 1,64
```

### 5.1.4 FTP Error

Error occurs during FTP applications because of wrong parameter setting.

//Example of FTPError
AT+FTPPW="3214567" //Set wrong password.
OK
AT+FTPGET=1 //Download file.
OK
+FTPGET:1,72 //FTP session password error. The connection to the FTP server is closed.

Note: Other errors, you can refer to "AT+FTPGET" command in “SIM7070_SIM7080_SIM7090 Series AT Command Manual”.

5.1.5 FTP Operation Error

Error occurs during FTP applications because of wrong operating.

//Example of FTP Operation Error

AT+FTPGET=1 //Download file.
OK
+FTPGET:1,66 //The parameter of "get file name" is empty. It shows ftp operation error.
AT+FTPPUT=1 //Open the FTP PUT session.
OK
AT+FTPPUT=1 //Open the FTP PUT session again. Show ftp operation error.
OK
+FTPPUT:1,66

5.1.6 FTP READ and WRITE Error

Error occurs before FTP applications because of operating in wrong state.

//Example of FTP5.6 READ and WRITE Error

AT+FTPGET=1 // Download file.
OK
AT+FTPGET=2,1000 //Read data before "+FTPGET: 1,1" is shown.
ERROR
+FTPGET: 1,1 //Data are available
5.1.7 Set FTP Download Break Point Parameter

It provides the method to use FTP broken download resuming function.

//Example of Set FTP Download Break Point Parameter

```plaintext
AT+FTPGET=1          //Download file.
OK

+FTPGET: 1,1          //Data are available.
AT+FTPGET=2,1024      // Request to read 1024 bytes.
+FTPGET: 2,29
wodeceeshijiegou,zhgeshigeshia
OK
+FTPGET: 1,0          //Data transfer finished. The connection to the FTP server is closed.
```
AT+FTPREST=20
OK
//Set the breakpoint.
AT+FTPGET=1
OK
//Download file.
+FTPGET: 1,1
//Data are available.
AT+FTPGET=2,1024
//Get the data begin from the broken point.
+FTPGET: 2,9
shigeshia
OK
+FTPGET: 1,0
//Data transfer is finished. The connection to the FTP server is closed.

5.1.8 FTP DELE Method

Delete the specified file in FTP server.

//Example of FTP DELE Method
AT+FTPCID=0
OK
//Set parameters for FTP session.
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/"
OK
AT+FTPDELETE
OK
//Delete file.
+FTPDELETE:1,0
//Delete file finished. The connection to the FTP server is closed.
5.1.9 FTP SIZE Method

Get the size of specified file in FTP server.

//Example of FTP SIZE Method

AT+FTPCID=0    //Set parameters for FTP session.
   OK
AT+FTPSERV="112.74.93.163"
   OK
AT+FTPUN="simcomtest"
   OK
AT+FTPPW="simcomtest"
   OK
AT+FTPGETNAME="simftp.txt"
   OK
AT+FTPGETPATH="/"
   OK
AT+FTPSIZE    //Request file size.
   OK
   //Get the size of file finished. The connection to the FTP server is closed.
+FTPSIZE:1,0,1024

5.1.10 FTP MKD and RMD Method

Make and remove directory on the remote machine.

//Example of FTP MKD and RMD Method

AT+FTPCID=0    //Set parameters for FTP session.
   OK
AT+FTPSERV="112.74.93.163"
   OK
AT+FTPUN="simcomtest"
   OK
AT+FTPPW="simcomtest"
   OK
AT+FTPGETPATH="/test"
OK
AT+FTPMKD
OK
//Create directory.
+FTPMKD: 1,0
AT+FTPRMD
OK
//Delete directory.
+FTPRMD: 1,0

5.1.11 FTP LIST Session

List contents of remote directory.

//Example of FTPLISTSession
AT+FTPCID=0
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/"
OK
AT+FTPLIST=1
OK

+FTPLIST: 1,1
//List information.
+FTPLIST: 2,1024
//Data are available
+FTPLIST: 2,126
total 0
drw-rw-rw- 1 user group 0 Oct 12 14:58.
drw-rw-rw- 1 user group 0 Oct 12 14:58...
OK
5.1.12 FTP Extend PUT Method

Extend Upload data to the remote machine.

//Example of FTP Extend PUT Method

AT+FTPCID=0
OK //Set parameters for FTP session.
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPPUTPATH="/"
OK
AT+FTPEXTPUT=1
OK //Set FTP to extend put method.
AT+FTPEXTPUT=2,0,1024,10000
OK //Client requests to send 1024 bytes.
//Response indicates that user must input 1024 bytes for transferring. It is saved in the module.
//It is ready to receive data from UART, and DCD
OK

AT+FTPPUT=1

OK

+FTPPUT: 1,0

AT+FTPEXTPUT=0

OK

---

5.1.13 FTP Extend GET Method

Extend Download File

//Example of FTP Extend GET Method

AT+FTPCID=0

OK

AT+FTPSERV="112.74.93.163"

OK

AT+FTPUN="simcomtest"

OK

AT+FTPPW="simcomtest"

OK

AT+FTPGETNAME="simftp.txt"

OK

AT+FTPGETPATH="/"

OK

AT+FTPEXTGET=1

OK

AT+FTPEXTGET?

//Query progress of FTP session

+FTPEXTGET: 1,64136

OK

+FTPEXTGET: 1,0

//File download succeed.
### 5.1.14 FTP EPUT Method

Load file in RAM from file system then upload with FTPEPUT.

#### Example of FTP EPUT Method

```
AT+FTPCID=0 //Set parameters for FTP session.
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPPUTNAME="simftp.txt"
OK
AT+FTPPUTPATH="/"
OK
AT+FTPETPUT=1 //Start FTP EPUT session
OK

+FTPETPUT: 1,1 //FTP session is ready for uploading.
AT+FTPETPUT=2 //Response requests to send data.

OK
+FTPETPUT:2,1 //It is ready to receive data from UART, and DCD has been set to low.
......
<ETX>
OK
```

//Output receive data from position 0, length 174125

+FTPEXTGET: 3,174125 //Output data

OK //Finish output

AT+FTPEXTGET=0 //End FTPEXTGET.

OK

//Output data

OK //Finish output

AT+FTPEXTGET=0 //End FTPEXTGET.

OK
5.1.15 FTP ETGET Method

Download data from the remote machine.

//Example of FTP ETGET Method

```
AT+FTPCID=0 //Set parameters for FTP session.
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FPTUN="simcomtest"
OK
AT+FPPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/"
OK
AT+FTPETGET=1 //Start FTP ETGET session
OK
+FTPETGET: 1,1 //Enter data transfer mode.
0123456789012345678901234567890123456789012345678901234567890123456789012345678901234567890. .... 1234
<ETX>
+FTPETGET:1,0 //Data transfer finished. The connection to the remote machine is closed.
```

5.1.16 FTP QUIT Method

Quit current FTP session

//Example of FTP QUIT Method

```
AT+FTPCID=0 //Set parameters for FTP session.
```
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/"
OK
AT+FTPGET=1 //Download file.
OK
AT+FPTQUIT //Quit FTP session
OK
+FTPGET: 1,80 //Manual quit FTP session

5.1.17 FTP Rename Method

Rename the specified file of remote machine.

//Example of FTP Rename Method

AT+FTPCID=0 //Set parameters for FTP session.
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPGETPATH="/"
OK
AT+FTPGETNAME="simftp.txt" //The old file name is "simftp.txt".
OK
AT+FPTPUTNAME="simftp2.txt" //The new file name is "simftp2.txt".
OK
AT+FPRENAME //Execute renames function. Rename the file
5.1.18 FTP MDTM Method

Get the last modification timestamp of specified file on the remote machine.

//Example of FTP MDTM Method

```
AT+FPCID=0
OK
AT+FTPserv="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPpw="simcomtest"
OK
AT+FTPgetname="simftp.txt"
OK
AT+FTPgetpath="/"
OK
AT+FTPmdtm
OK
+FTPMDTM:1,0,20140409060951
```

//Return the timestamp successfully.

5.1.19 FTP TOFSST Method

Get FTP download file to FS status.

//Example of FTP TOFSST Method

```
AT+FPCID=0
OK
AT+FTPserv="112.74.93.163"
OK
```
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/
OK
AT+FTPEXTGET=2,3,"fssimftp.txt"
//Download simftp.txt to fssimftp.txt in FS.
OK
+FTPEXTGETFILE: 1,0
//Return download file successfully.
AT+FTPTOFSSST
//Get FTP download file to FS status.
+FTPTOFSSST: 0,0,1000
//Return download file to FS status.
OK

5.2 FTPS Function

5.2.1 FTPS download and convert SSL certificate

//Example of FTPS download and convert SSL Certificate.

AT+CFSINIT
OK
AT+CFSWFILE=3,"ftpbin_root_ca.cer",0,1492,1000
DOWNLOAD
OK
AT+CFSTERM
OK
AT+CSSLCFG="convert",2,"ftpbin_root_ca.cer"
OK
//Init FS AT command
//After download, sent certificate file through the serial port. 1492 is certificate size.
//Send CA file success
//Free data buffer
//Conversion CA certificate format.
//2 means CA type.
//ftpbin_root_ca.cer is CA certificate name.
5.2.2 FTP Explicit Method

Download data from FTP server used explicit method.

//Example of FTP GET Method used Explicit

```plaintext
AT+FPCID=0 //Set parameters for FTP session.
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
AT+FTPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/"
OK
AT+FTPSSL=2,0,"ftpbin_root_ca.cer",""
OK
AT+FTPGET=1 //Download file.
OK
+FTPGET: 1,1
AT+FTPGET=2,1024 //Request to read 1024 bytes
+FTPGET: 2,50 //Only 50 bytes are now available.
01234567890123456789012345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012345678
OK
```

5.2.3 FTP Implicit Method

Download data from FTP server used implicit method.

//Example of FTP GET Method used Implicit

```plaintext
AT+FPCID=0 //Set parameters for FTP session.
OK
AT+FTPSERV="112.74.93.163"
OK
AT+FTPUN="simcomtest"
OK
```
AT+FTPPW="simcomtest"
OK
AT+FTPGETNAME="simftp.txt"
OK
AT+FTPGETPATH="/"
OK
AT+FTPPO=990 //Set implicit port 990
OK
AT+FTPSSL=1,0,"ftpbin_root_ca.cer",""
  //Set implicit method
OK
AT+FTPGET=1 //Download file.
OK

+FTPGET: 1,1
AT+FTPGET=2,1024 //Request to read 1024 bytes
+FTPGET: 2,50 //Only 50 bytes are now available.
012345678901234567890123456789012345678
90123456789
OK
