

Export Firmware

Function Description

This tutorial will show you how to export the program firmware (.bin) via M5Burner.

1.After opening the M5Burner software, click **USER CUSTOM** in the lower left corner, and select the **Firmware Exporter** option.

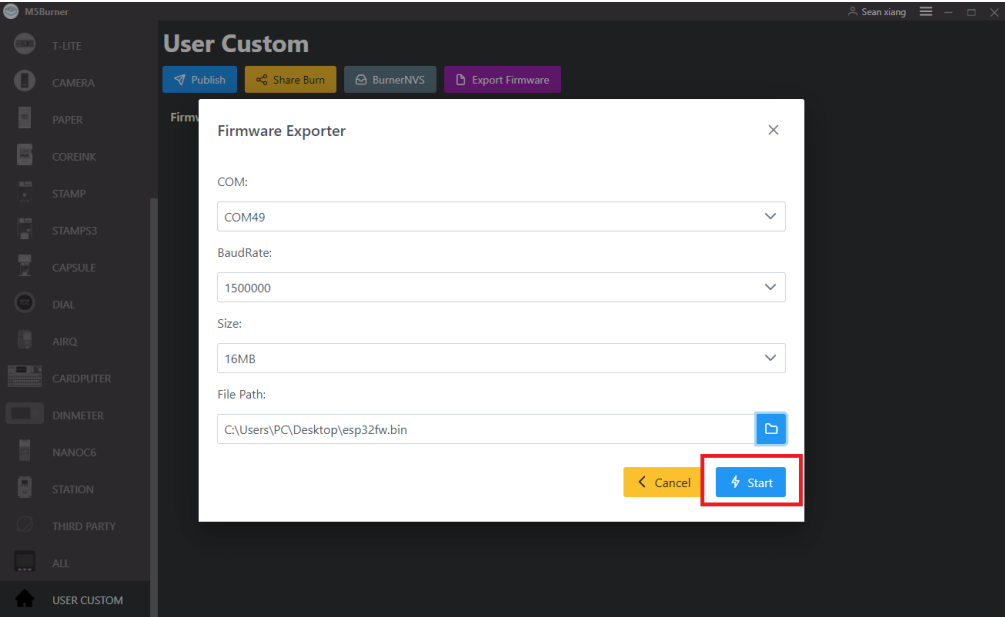

2.Select the appropriate port.

Port Selection Tip

If the `tty.usbmodemxxx` and `tty.wchusbseriallxxx` options are present, then select `tty.wchusbserial`.

3.Select the program firmware **export path** , after confirming that there is no error, click the **Start** button to start exporting the program firmware.

4.Wait until the progress bar below shows 100%, then you can find the program firmware in the `export path` above and use it.
